(57) **CLAIM**

The ornamental design for a mop removable side bumper with a snap connector, as shown and described.

**DESCRIPTION**

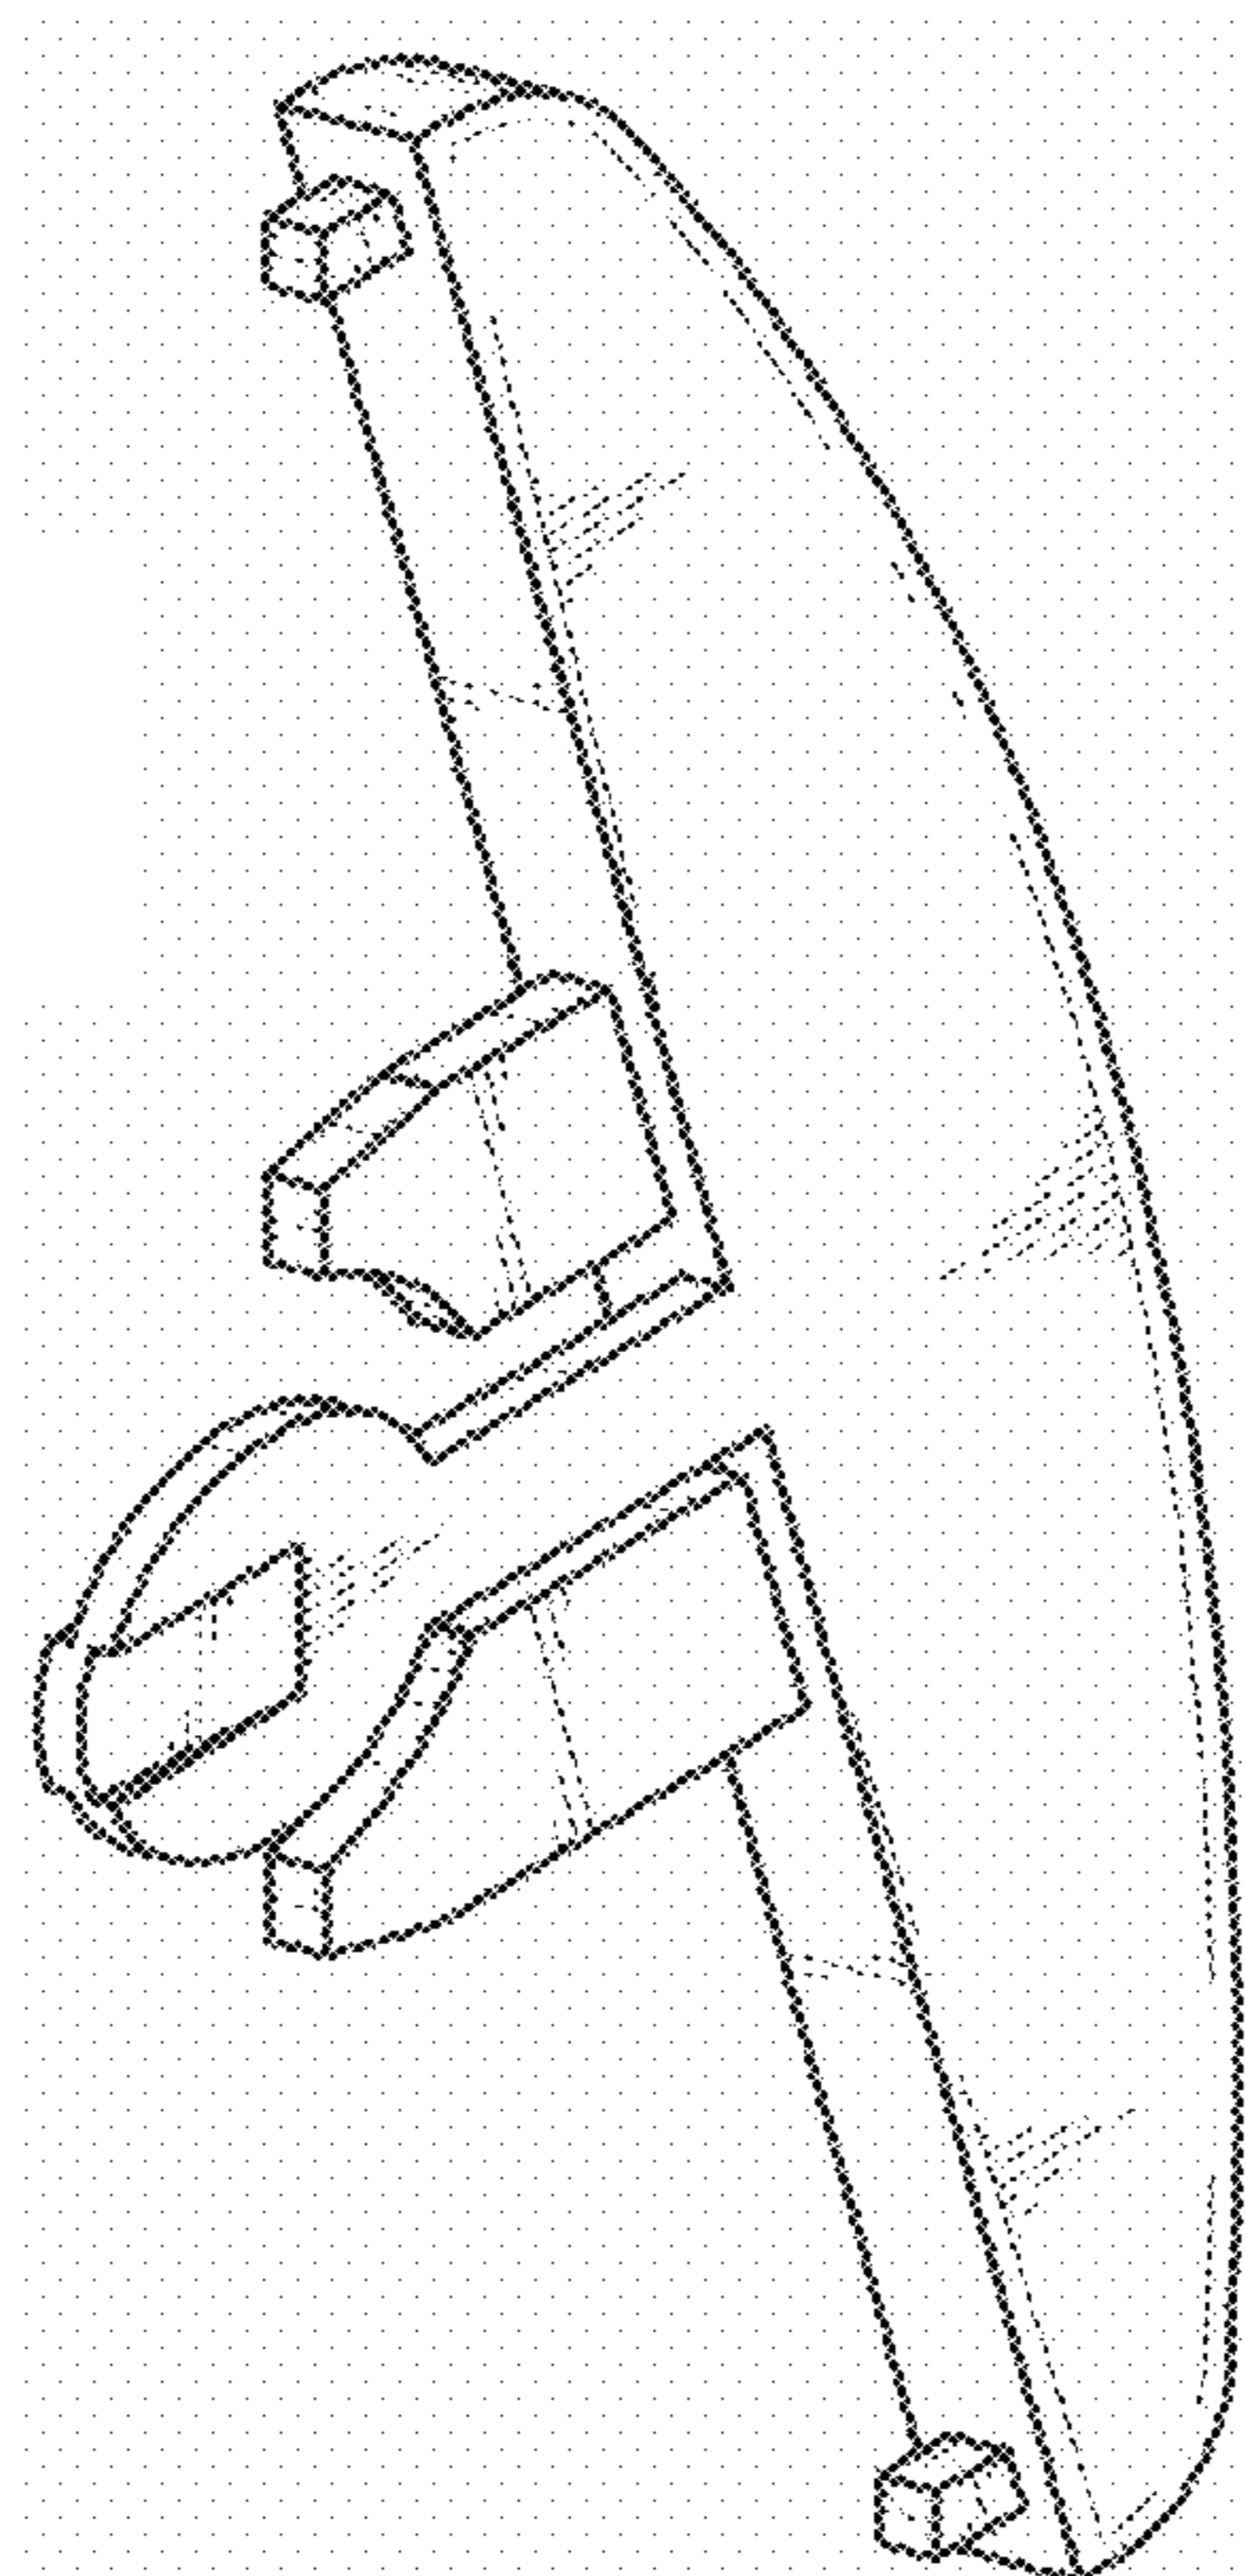

FIG. 1 is a detailed illustration of a perspective bottom view of the mop removable side bumper with a snap connector.

FIG. 2 is a detailed illustration of a bottom view of the mop removable side bumper with a snap connector; and,

FIG. 3 is a detailed illustration of a top view of the mop removable side bumper with a snap connector.

The snap connector of the mop removable side bumper allows the mop removable side bumper to be connected to and then easily removed from the main body of a mop base. When connected, the mop removable side bumper holds mop head attachments firmly in place. When removed, the mop removable side bumper no longer prohibits the mop head attachments from sliding free of the mop base to be cleaned or replaced.
