My optical adapter for mobile device is characterized by:

a) a generally cylindrical shape substantially flattened on one side to mate with a surface of a mobile device,

b) a substantially rounded bottom end which has a substantially vertical opening in the flattened side for aligning with a camera lens on the mobile device, and

c) a substantially rounded top end which has a vertical opening in the flattened side for allowing light to enter the optical adapter over the edge of the mobile device,

wherein the rounding on the top and bottom follow a substantially symmetrical curve.
