DESCRIPTION

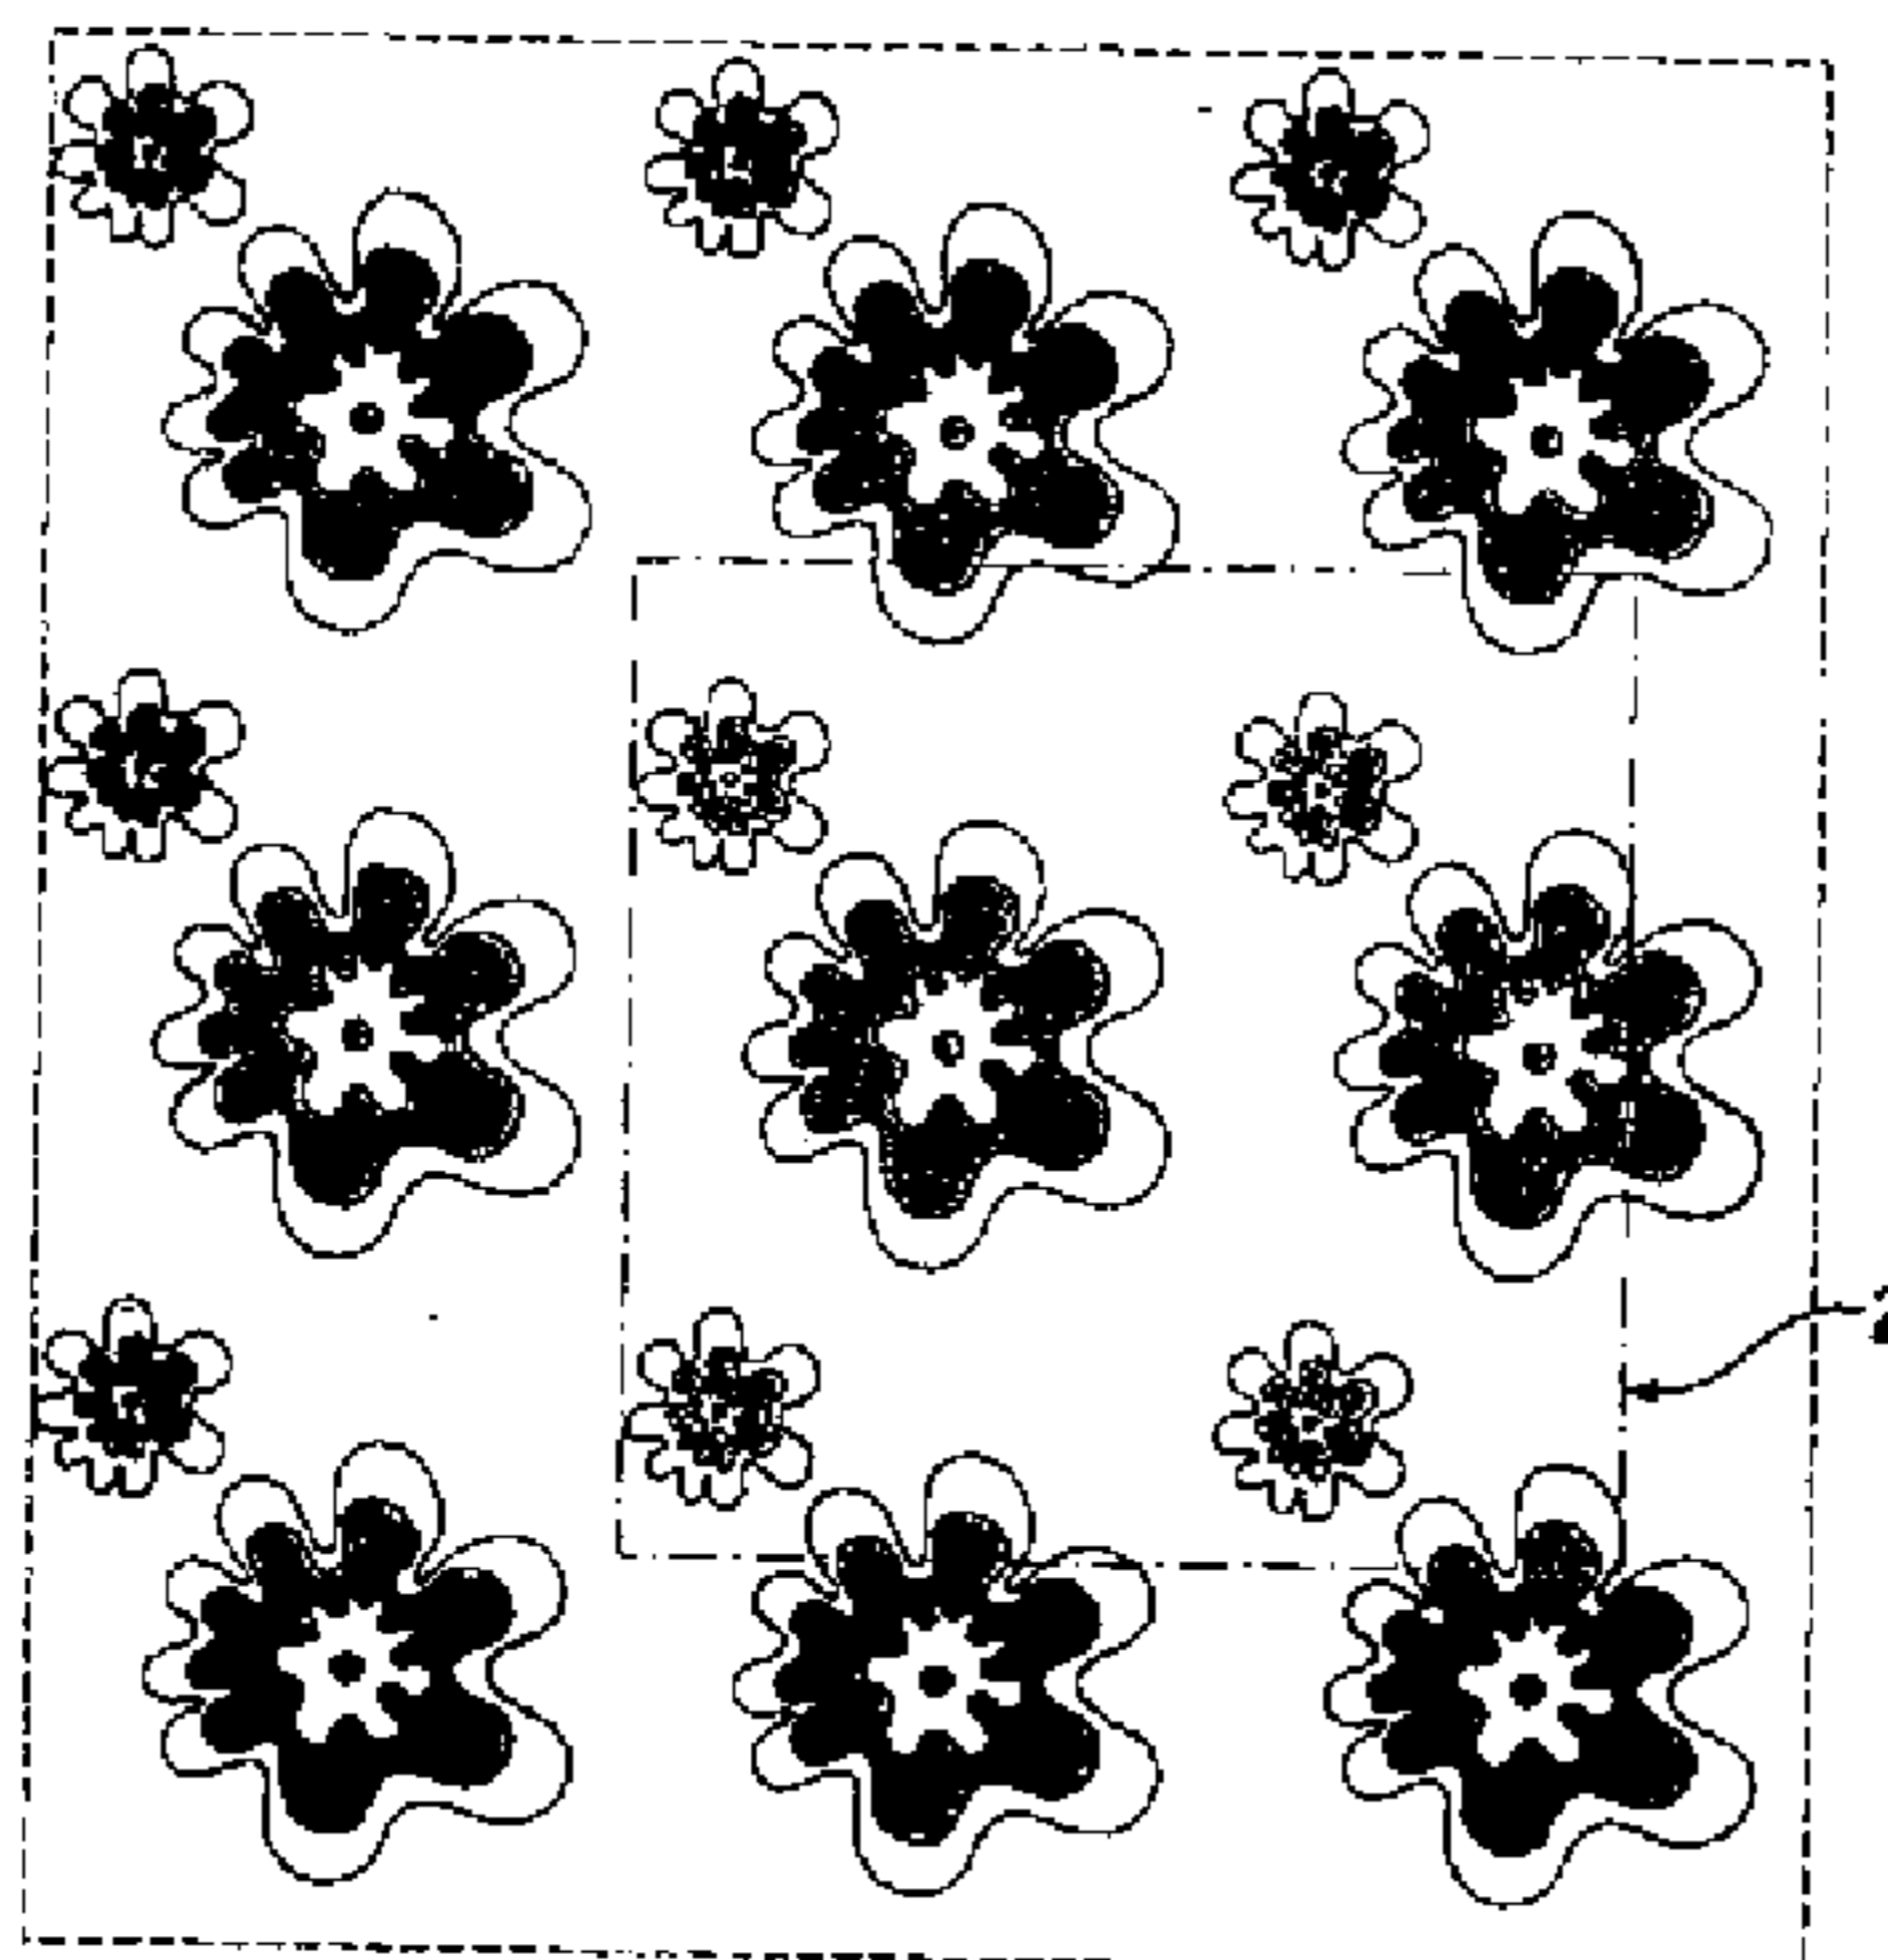

FIG. 1 is a top plan view of a synthetic resin paper showing our new ornamental design with dashed lines shown therein to identify the area 2 which circumscribes the location from which FIG. 2 is taken; and,

FIG. 2 is an enlarged fragmentary top plan view of the circumscribed area 2 identified by dashed lines in FIG. 1.

The broken lines in the drawings indicate that the synthetic resin paper has no specific length and that the design repeats uniformly throughout the entire length and width of the paper. The broken lines form no part of the claim. In addition, the dashed lines in FIG. 1, circumscribing the area 2, also form no part of the claim.

The material of the present design is a synthetic resin. The present design is a combination of the shape and pattern of the synthetic resin which may be used by being attached to a surface of an electronic appliance such as an air-conditioner, a refrigerator, a washing machine, and the like. Further, the present design may be used as wallpaper, films for glass decoration, decorative sheets, film-paper sheets, and the like, by being attached to a selected portion of a decorative glass plate, furniture, wall, floor, and the like, for interior decoration. The present design is continuous in up and down directions. The present design is full width in right and left directions.
