(57) **CLAIM**

The ornamental design for a container pull handle, as shown and described.

DESCRIPTION

FIG. 1 is a perspective view of the container pull handle of my design;
FIG. 2 is a front elevation view of the container pull handle;
FIG. 3 is a rear elevation view of the container pull handle;
FIG. 4 is a left side elevation view of the container pull handle, the right side elevation view being a mirror image thereof;
FIG. 5 is a top plan view of the container pull handle;
FIG. 6 is a bottom plan view of the container pull handle, in which the environmental material rendered in broken lines of the other views has been omitted for clarity; and,
FIG. 7 is a perspective view of the container pull handle from the same vantage point as FIG. 1, in which the handle has been rotated about an exemplary connection point with the container to which it may be attached, in order to show an underside thereof.

The broken lines in the figures represent an exemplary container to which the container pull handle may be attached and/or which may be carried by use of the container pull handle, but forms no part of the claimed design.
