(57) **CLAIM**

The ornamental design of a casing for NDT/NDI instrument herein, as shown and described.

DESCRIPTION

FIG. **1** is a front view of the presently disclosed casing design including the extended, rounded corners and bridging (approximately 45°) facets at all corners of the NDT instrument.

FIG. **2** is a top view of the presently disclosed casing design including the extended, rounded corners and bridging (approximately 45°) facets at all corners of the NDT instrument.

FIG. **3** is a left view of the presently disclosed casing design including the extended, rounded corners and bridging (approximately 45°) facets at all corners of the NDT instrument.

FIG. **4** is a right view of the presently disclosed casing design, including the extended, rounded corners and bridging (approximately 45°) facets at all corners of the NDT instrument.

FIG. **5** is a bottom view of the presently disclosed casing design including the extended, rounded corners and bridging (approximately 45°) facets at all corners of the NDT instrument.

FIG. **6** is a back view of the presently disclosed casing design including the extended, rounded corners and bridging (approximately 45°) facets at all corners of the NDT instrument.

FIG. **7** is a front view of an alternative embodiment of the presently disclosed casing design, including the extended, rounded corners and bridging (approximately 45°) facets at all corners of the NDT instrument.

FIG. **8** is a top view of the alternative embodiment of the presently disclosed casing design, including the extended, rounded corners and bridging (approximately 45°) facets at all corners of the NDT instrument.

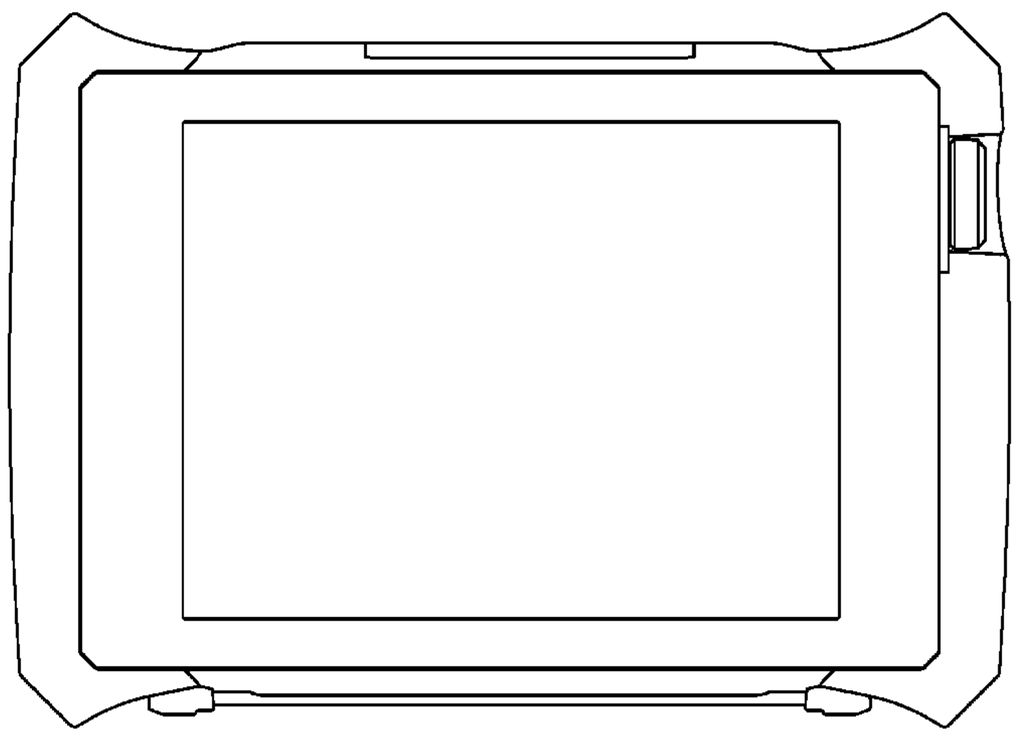

FIG. **9** is a left view of the alternative embodiment of the presently disclosed casing design, including the extended, rounded corners and bridging (approximately 45°) facets at all corners of the NDT instrument.

FIG. **10** is a right view of the alternative embodiment of the presently disclosed casing design, including the extended, rounded corners and bridging (approximately 45°) facets at all corners of the NDT instrument.

FIG. **11** is a bottom view of the alternative embodiment of the presently disclosed casing design, including the extended, rounded corners and bridging (approximately 45°) facets at all corners of the NDT instrument; and,

FIG. **12** is a back view of the alternative embodiment of the presently disclosed casing design, including the extended, rounded corners and bridging (approximately 45°) facets at all corners of the NDT instrument.
