Features illustrated in phantom lines are intended to show a preferred environment for the handheld bottle sleeve and form no portion of the claimed invention. As illustrated, an exemplary bottle, bottle cap, zipper, zipper pull, logo tag, and ventilation hole pattern are illustrated in phantom lines and therefore form no part of the claimed invention. The handheld bottle sleeve is formed from a flexible material that can expand to accommodate a bottle of different sizes and shapes other than the shape of the particular bottle as illustrated within the handheld bottle sleeve, and therefore the bottle as illustrated depicts a preferred environment for the handheld bottle sleeve.
