(57) **CLAIM**

The ornamental design for a display screen with graphical user interface, as shown and described.

DESCRIPTION

FIG. 1 is a front view of the first image of a display screen with graphical user interface showing our new design; FIG. 2 is a front view of a second image thereof; FIG. 3 is a front view of a third image thereof; FIG. 4 is a front view of a fourth image thereof; FIG. 5 is a front view of a fifth image thereof; FIG. 6 is a front view of a sixth image thereof; FIG. 7 is a front view of a seventh image thereof; and, FIG. 8 is a front view of an eighth image thereof.

The broken line drawing of a display screen in all views illustrates unclaimed environment and forms no part of the claimed design. The broken line showing the remainder of the image in all views illustrates unclaimed portions of the design and forms no part thereof.

The appearance of the transitional image sequentially transitions between the images shown in FIGS. 1-8. The process or period in which one image transitions to another image forms no part of the claimed design.

Each of the graphical user interfaces shown in the drawing disclosure has a plurality of sub-interfaces, eight sub-interfaces for example. The border line of each sub-interface represents the size and position of each sub-interface and may be visible. The sub-interfaces round a virtual axis while the virtual axis approaches to the user until one of the sub-interfaces stops at a predetermined location relative to the display screen.

In FIGS. 1-8, the sub-interfaces convey the impression of translucency/transparency such that the rear sub-interfaces behind the front sub-interfaces can be observed.

1 Claim, 8 Drawing Sheets
