(57) **CLAIM**

The ornamental design for portion of a display panel with a transitional graphical user interface, as shown and described.

DESCRIPTION

FIG. **1** is a front view of a portion of a display panel with a transitional graphical user interface showing a first image in a sequence according to a first embodiment of my new design, wherein the stippling is used to show relative degrees of shading throughout the interface;

FIG. **2** is a front view of a second image in the sequence of the first embodiment;

FIG. **3** is a front view of a third image in the sequence of the first embodiment;

FIG. **4** is a front view of a portion of a display panel with a transitional graphical user interface showing a first image in a sequence according to a second embodiment of my new design, wherein the stippling is used to show relative degrees of shading throughout the interface;

FIG. **5** is a front view of a second image in the sequence of the second embodiment;

FIG. **6** is a front view of a third image in the sequence of the second embodiment;

FIG. **7** is a front view of a portion of a display panel with a transitional graphical user interface showing a first image in a sequence according to a third embodiment of my new design, wherein the stippling is used to show relative degrees of shading throughout the interface;

FIG. **8** is a front view of a second image in the sequence of the third embodiment;

FIG. **9** is a front view of a third image in the sequence of the third embodiment;

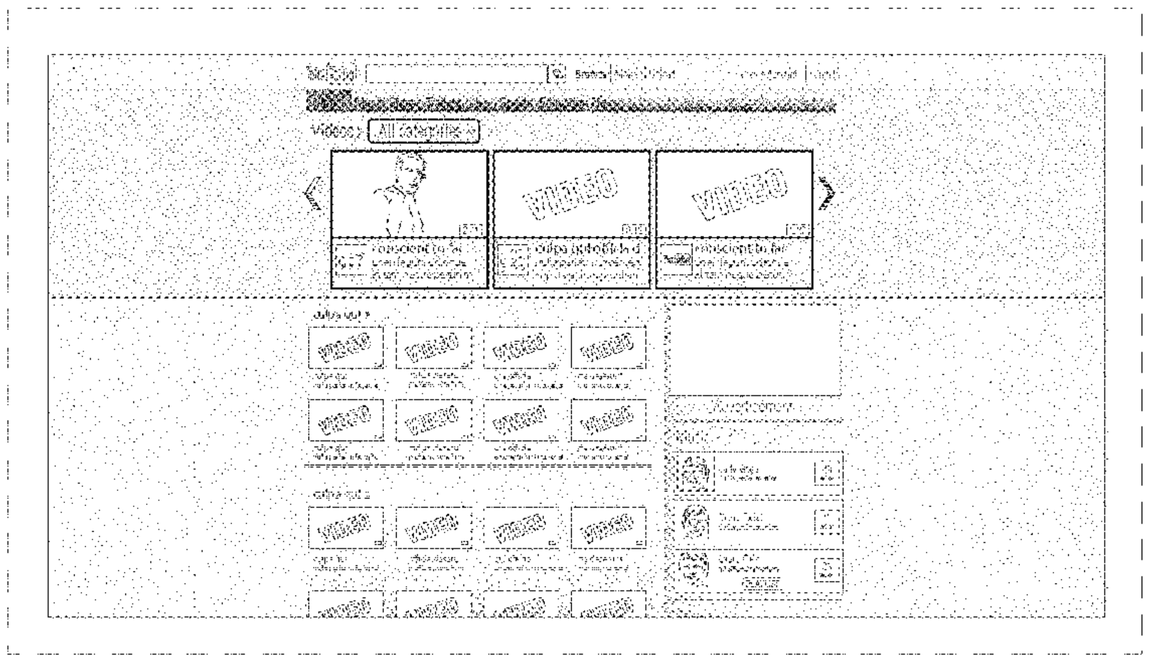

FIG. **10** is a front view of a portion of a display panel with a transitional graphical user interface showing a first image in a sequence according to a fourth embodiment of my new design, wherein the stippling is used to show relative degrees of shading throughout the interface;

FIG. **11** is a front view of a second image in the sequence of the fourth embodiment;

FIG. **12** is a front view of a third image in the sequence of the fourth embodiment;

FIG. **13** is a front view of a portion of a display panel with a transitional graphical user interface showing a first image in a sequence according to a fifth embodiment of my new design, wherein the stippling is used to show relative degrees of shading throughout the interface;

FIG. **14** is a front view of a second image in the sequence of the fifth embodiment;

FIG. **15** is a front view of a third image in the sequence of the fifth embodiment;

FIG. **16** is a front view of a portion of a display panel with a transitional graphical user interface showing a first image in a sequence according to a sixth embodiment of my new design, wherein the stippling is used to show relative degrees of shading throughout the interface;

FIG. **17** is a front view of a second image in the sequence of the sixth embodiment; and,

FIG. **18** is a front view of a third image in the sequence of the sixth embodiment.

The subject matter in this patent includes a process or period during which a user interface component sequentially transitions between images shown in the respective embodiments. This process or period in which one image transitions into another forms no part of the claimed design.

The broken lines including the showing of a portion of a display panel of a communications terminal surrounding the illustrated user interface are included for the purpose of illustrating environmental structure and form no part of the claimed design.
