(57) **CLAIM**

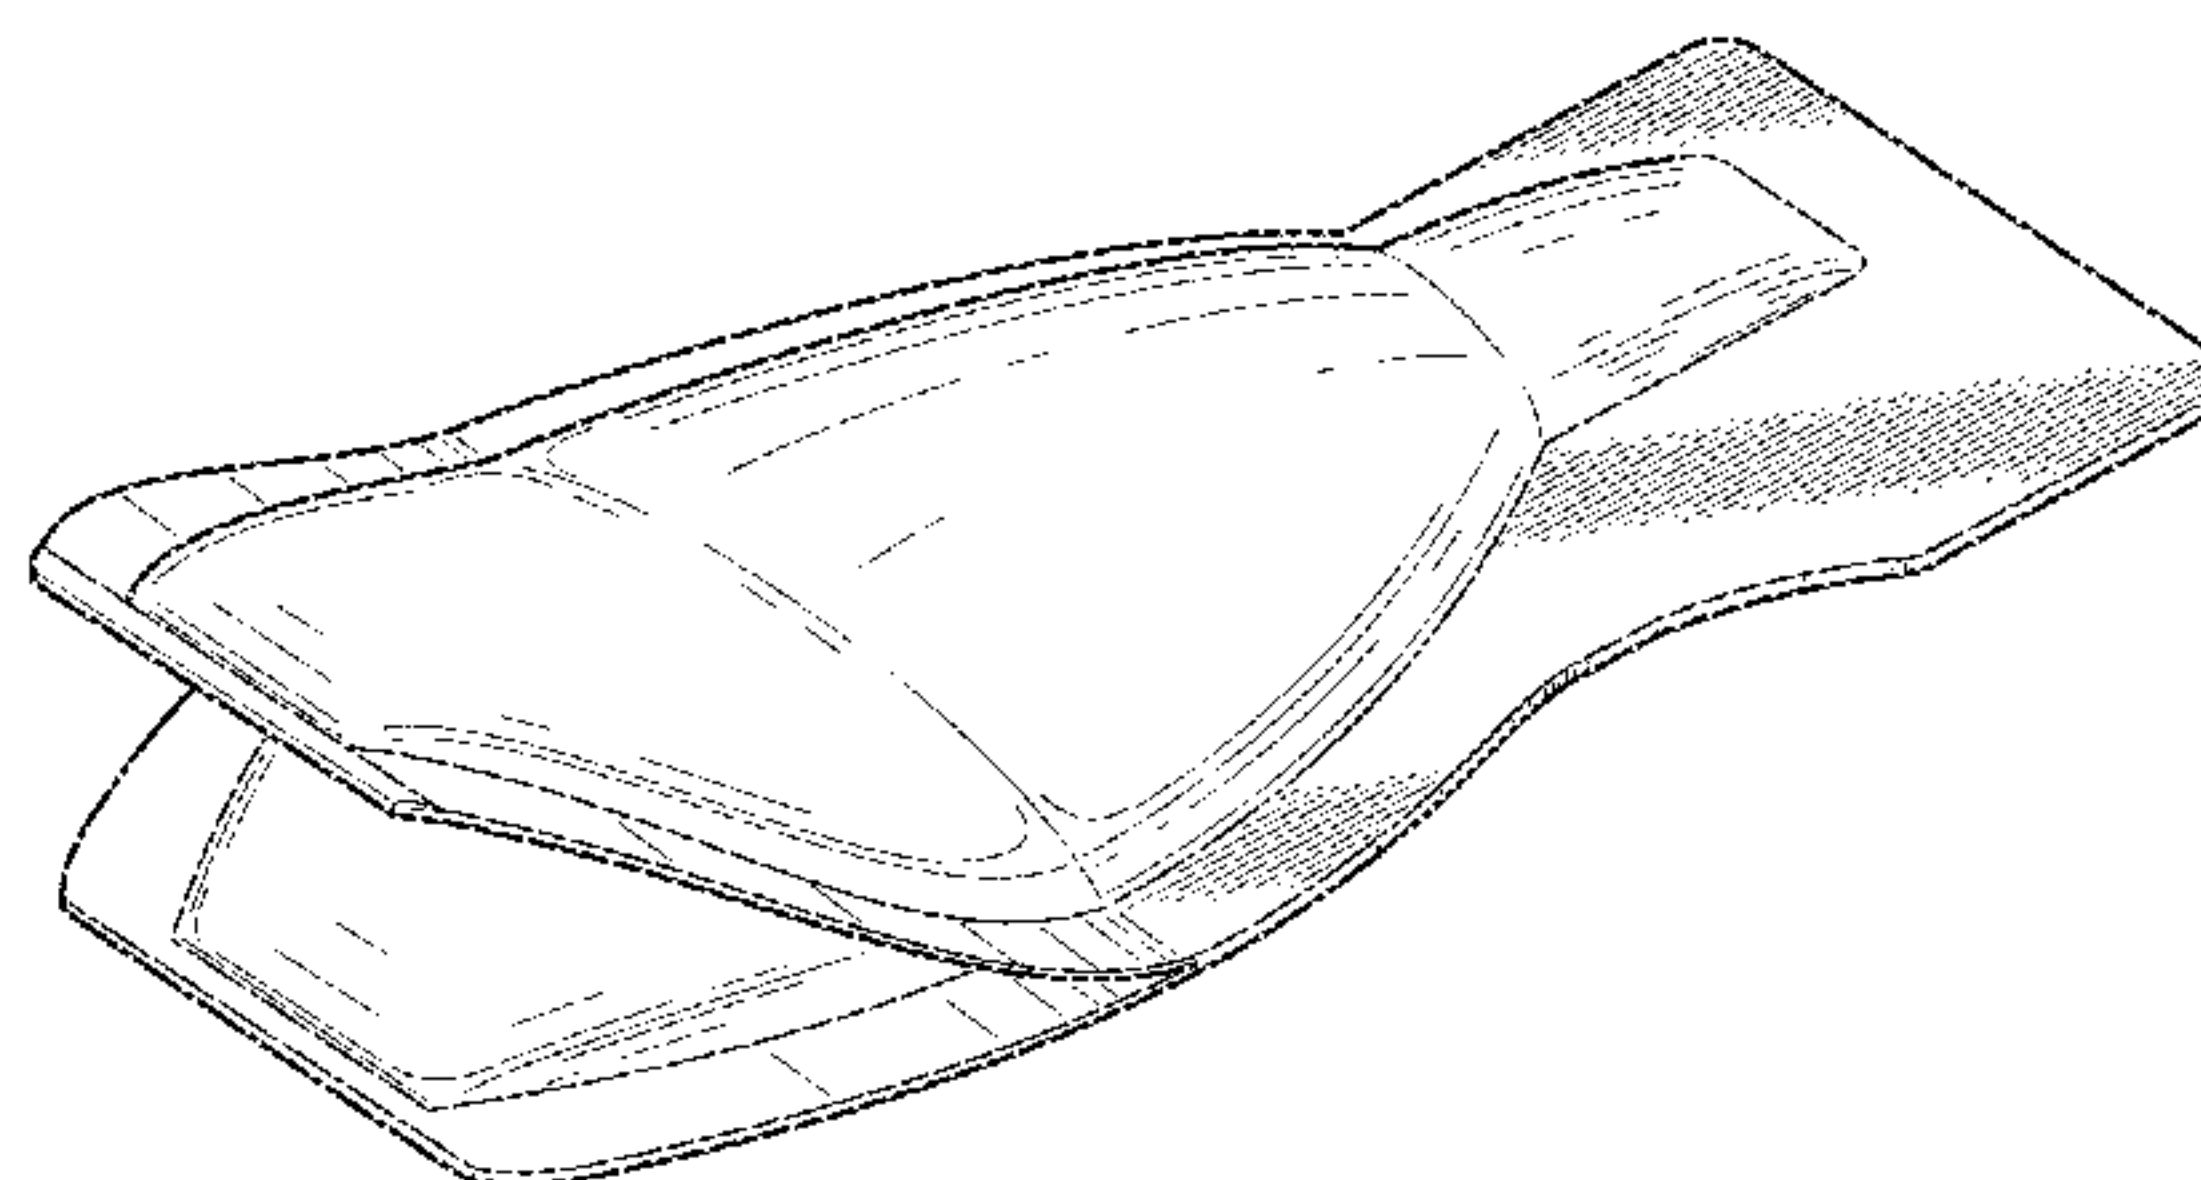

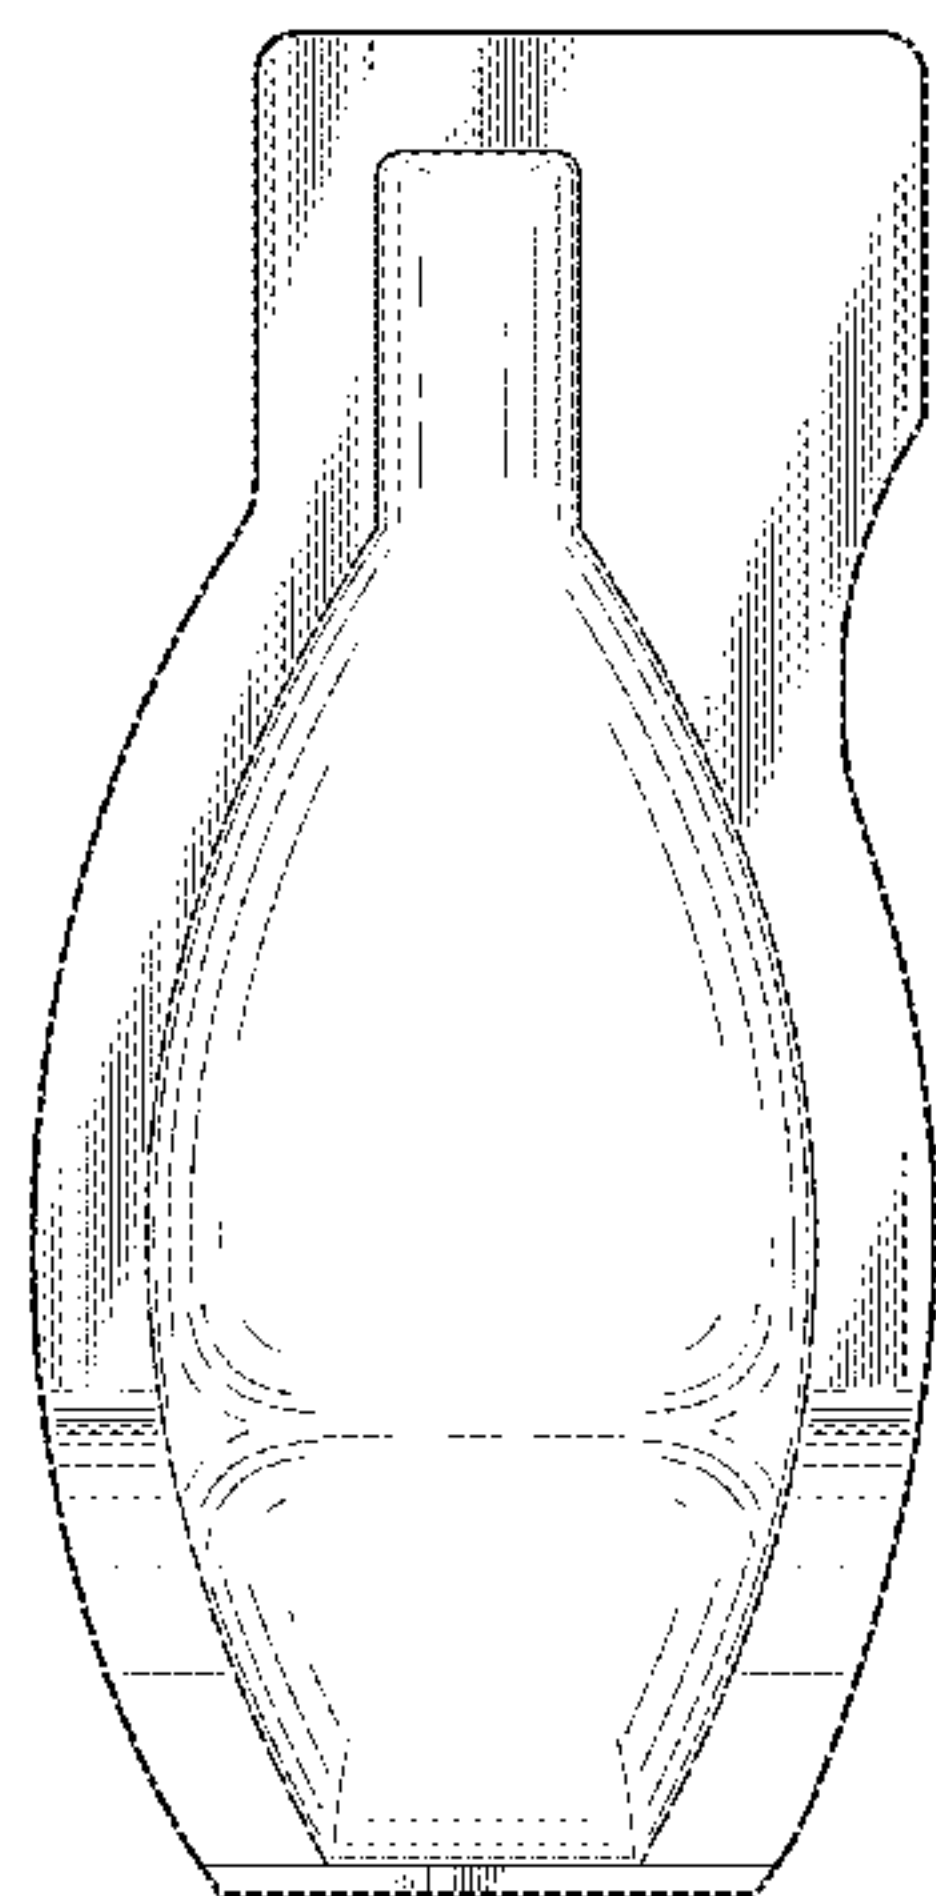

We claim the ornamental design for a pouch packette, as shown and described.

**DESCRIPTION**

FIG. 1 illustrates a front view of my new design of a pouch packette; the rear elevational being a mirror image thereof; FIG. 2 illustrates a top view thereof; FIG. 3 illustrates a bottom view thereof; FIG. 4 illustrates a right side view thereof; FIG. 5 illustrates a left side view thereof; and, FIG. 6 illustrates a right bottom perspective view thereof, with lower portions of the packette splayed apart slightly. The pouch packette shown and claimed herein represents a pouch packette for containing and dispensing contents held therein, such as a single dose fluidal mendicant. The pouch packette includes sealed sheet sides to form a body and a pair of depending legs with a gusset defining interior surfaces of the legs, an apex, and a foot on each leg. The legs may splay apart for standing on a surface. The body and the legs define a cavity of holding contents. An end of the body opposing the feet includes a narrowed dispensing spout in a field for grasping the pouch packette. Additionally, each of the opposing portions of the feet may be grasped, or the opposing legs may be grasped, for dispensing operation of the pouch packette after opening the dispensing spout by removal of a portion of the field.

The shading lines illustrate the contour of the claimed design and not a claimed surface pattern.

**1 Claim, 3 Drawing Sheets**
