(57) **CLAIM**

The ornamental design for portion of a display panel with a changeable computer icon, as shown and described.

DESCRIPTION

FIG. 1 is a front view of a portion of a display panel with a changeable computer icon showing a first image in a sequence of my new design, wherein the stippling is used to show shading; and,

FIG. 2 is a front view of a second image thereof in the sequence.

The subject matter in this patent includes a process or period during which a computer icon image changes into another image. This process or period in which one computer icon image transitions into another forms no part of the claimed design, nor is the order of the drawing figures restrictive of the particular sequence in which the computer icon images appear on the display screen.

The broken lines including the showing of a portion of a display panel of a communications terminal surrounding the illustrated computer icon are included for the purpose of illustrating environmental structure and form no part of the claimed design.
