(57) **CLAIM**

The ornamental design for a Lapidus bone wedge, as shown and described.

DESCRIPTION

FIG. **1** is a top perspective view of the Lapidus bone wedge comprising the new design;
FIG. **2** is a right elevational view of the design of FIG. **1**;
FIG. **3** is a left elevational view of the design of FIG. **1**;
FIG. **4** is a front elevational view of the design of FIG. **1**;
FIG. **5** is a rear elevational view of the design of FIG. **1**;
FIG. **6** is a top view of the design of FIG. **1**, where the bottom view is a mirror image; and,
FIG. **7** is a right elevational view of an alternative embodiment of a Lapidus bone wedge, portions of which are cut away to illustrate indeterminate thickness, which is the sole difference between it and FIGS. **1** through **6**.
FIG. **7** is shown broken in the middle to indicate indeterminate thickness, with the understanding that the "indeterminate" portion of the Lapidus bone wedge forms no part of the claimed design. Patentability is based only on those portions of the article shown in solid lines.
