(57) **CLAIM**

The ornamental design for two adjacent sides of a headless pole light with graduated height apertures, as shown and described.

**DESCRIPTION**

FIG. 1 is a perspective view of two adjacent sides of a headless pole light with graduated height apertures, showing my/our new design.

FIG. 2 is a front elevation view of one of the two adjacent sides shown in FIG. 1, the elevation view of the other of the two adjacent sides being the same.

FIG. 3 is a perspective view of a second embodiment of my/our design for two adjacent sides of a headless pole light with graduated height apertures. The front elevation view of the right adjacent side of this embodiment is the same as FIG. 2.

FIG. 4 is a perspective view of a third embodiment of my/our design for two adjacent sides of a headless pole light with graduated height apertures.

FIG. 5 is a front elevation view of one of the two adjacent sides shown in FIG. 4, the other of the two adjacent sides being the same; and,

FIG. 6 is a perspective view of a fourth embodiment of my/our design for two adjacent sides of a headless pole light with graduated height apertures. The front elevation view of the right adjacent side of this embodiment is the same as FIG. 5.

Portions or features of the two adjacent sides of the headless pole light with graduated height apertures not shown in the drawings form no part of the claimed design. The fragmented broken lines indicate that the bounds of the claim do not include a specific length to the planar surfaces that comprise the two adjacent sides of a headless pole light. The other broken lines show environmental structure. None of the broken lines in the drawings form any part of the claimed design.
