(57) **CLAIM**
The ornamental design for an elephant shaped incentive spirometer, as shown and described.

DESCRIPTION

FIG. 1 is a front elevated view of the elephant shaped incentive spirometer showing the new design; FIG. 2 is a back view thereof; and, FIG. 3 is a top view thereof.

In the drawings, the broken lines depict unclaimed subject matter only and form no part of the claimed design. In FIG. 1, the circular broken line denotes the location where an incentive spirometer mouthpiece and tubing would be affixed. These are integral parts to the function of an incentive spirometer and not included as part of this design patent.

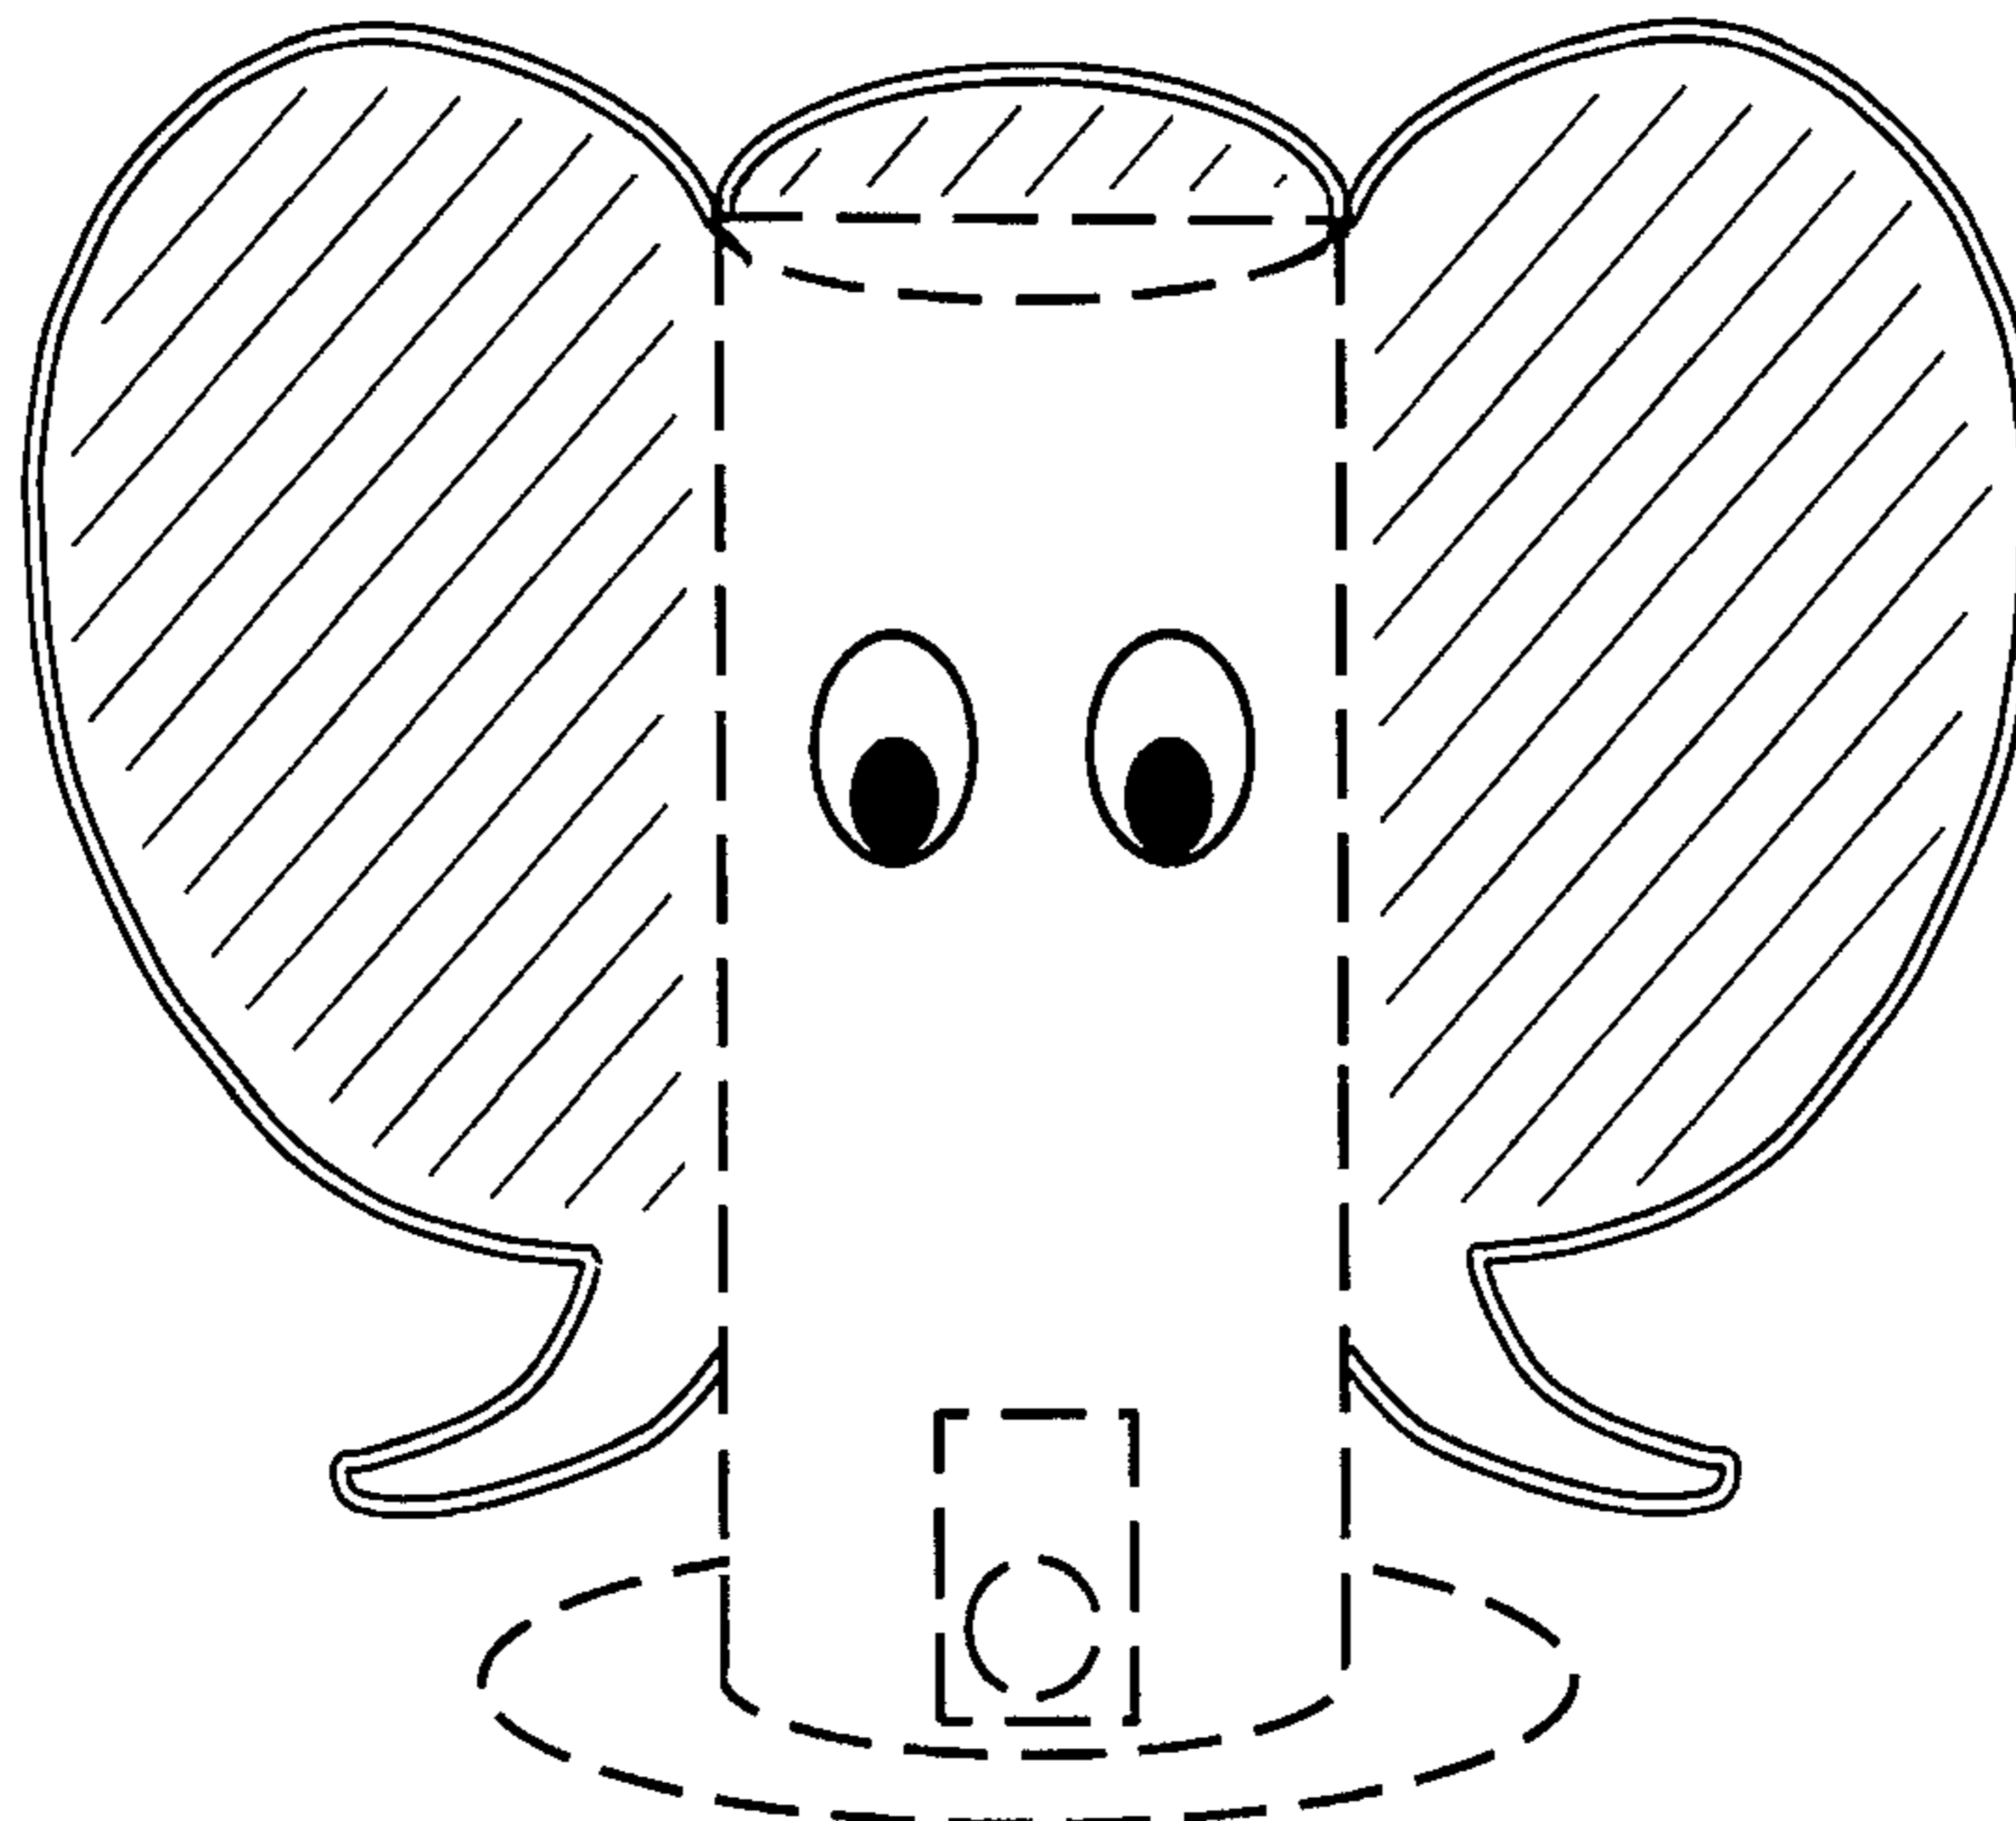

An incentive spirometer is a medical device used to promote the expansion of a patient's lungs through intermittent inhalation. We set forth a new shape, an elephant shape, for incentive spirometers to facilitate the use of these medical devices among the pediatric patient population.
