(57) **CLAIM**

I claim the ornamental design for an LED module, as shown and described.

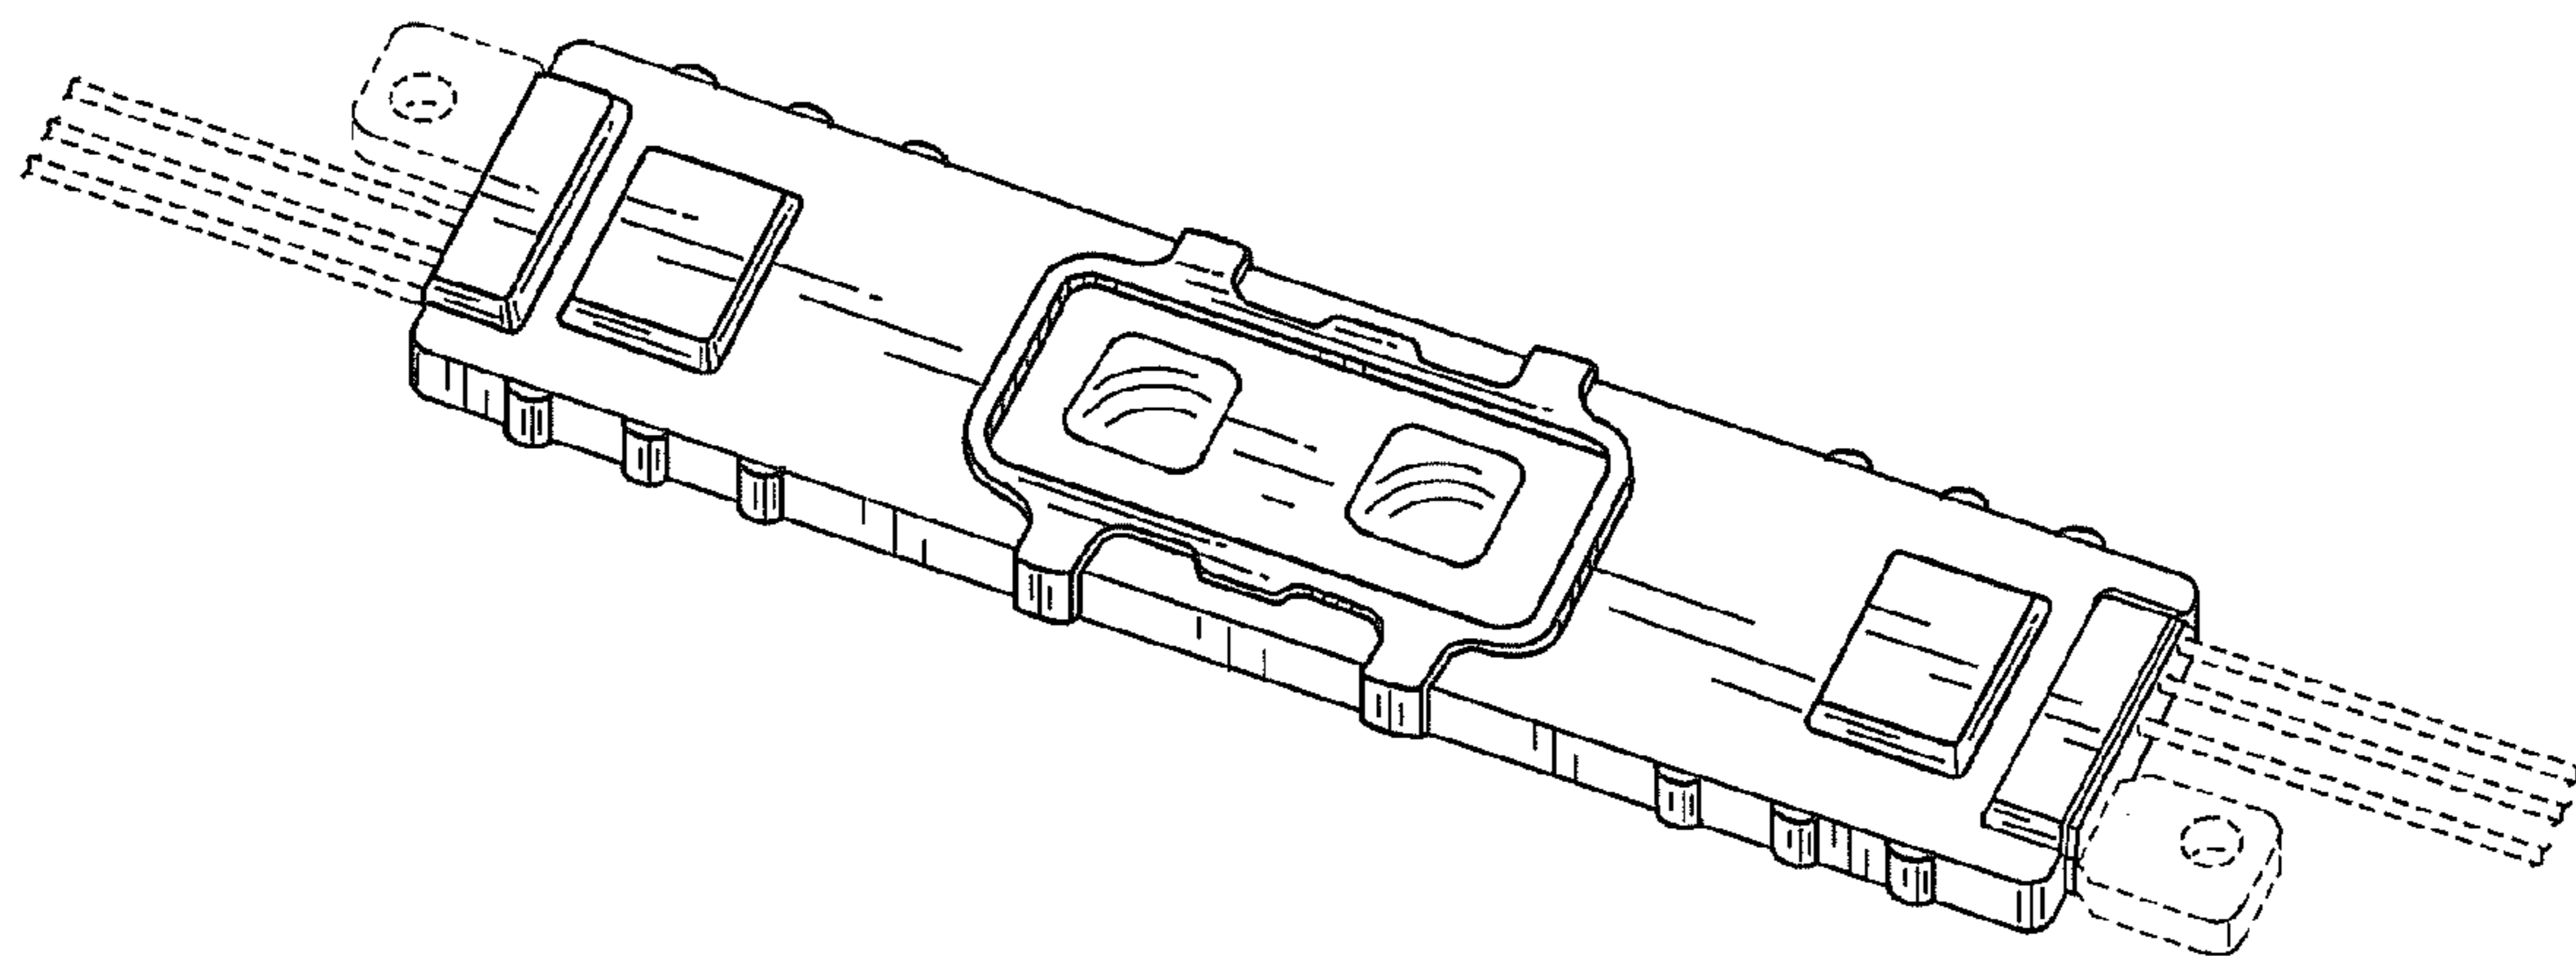

**DESCRIPTION**

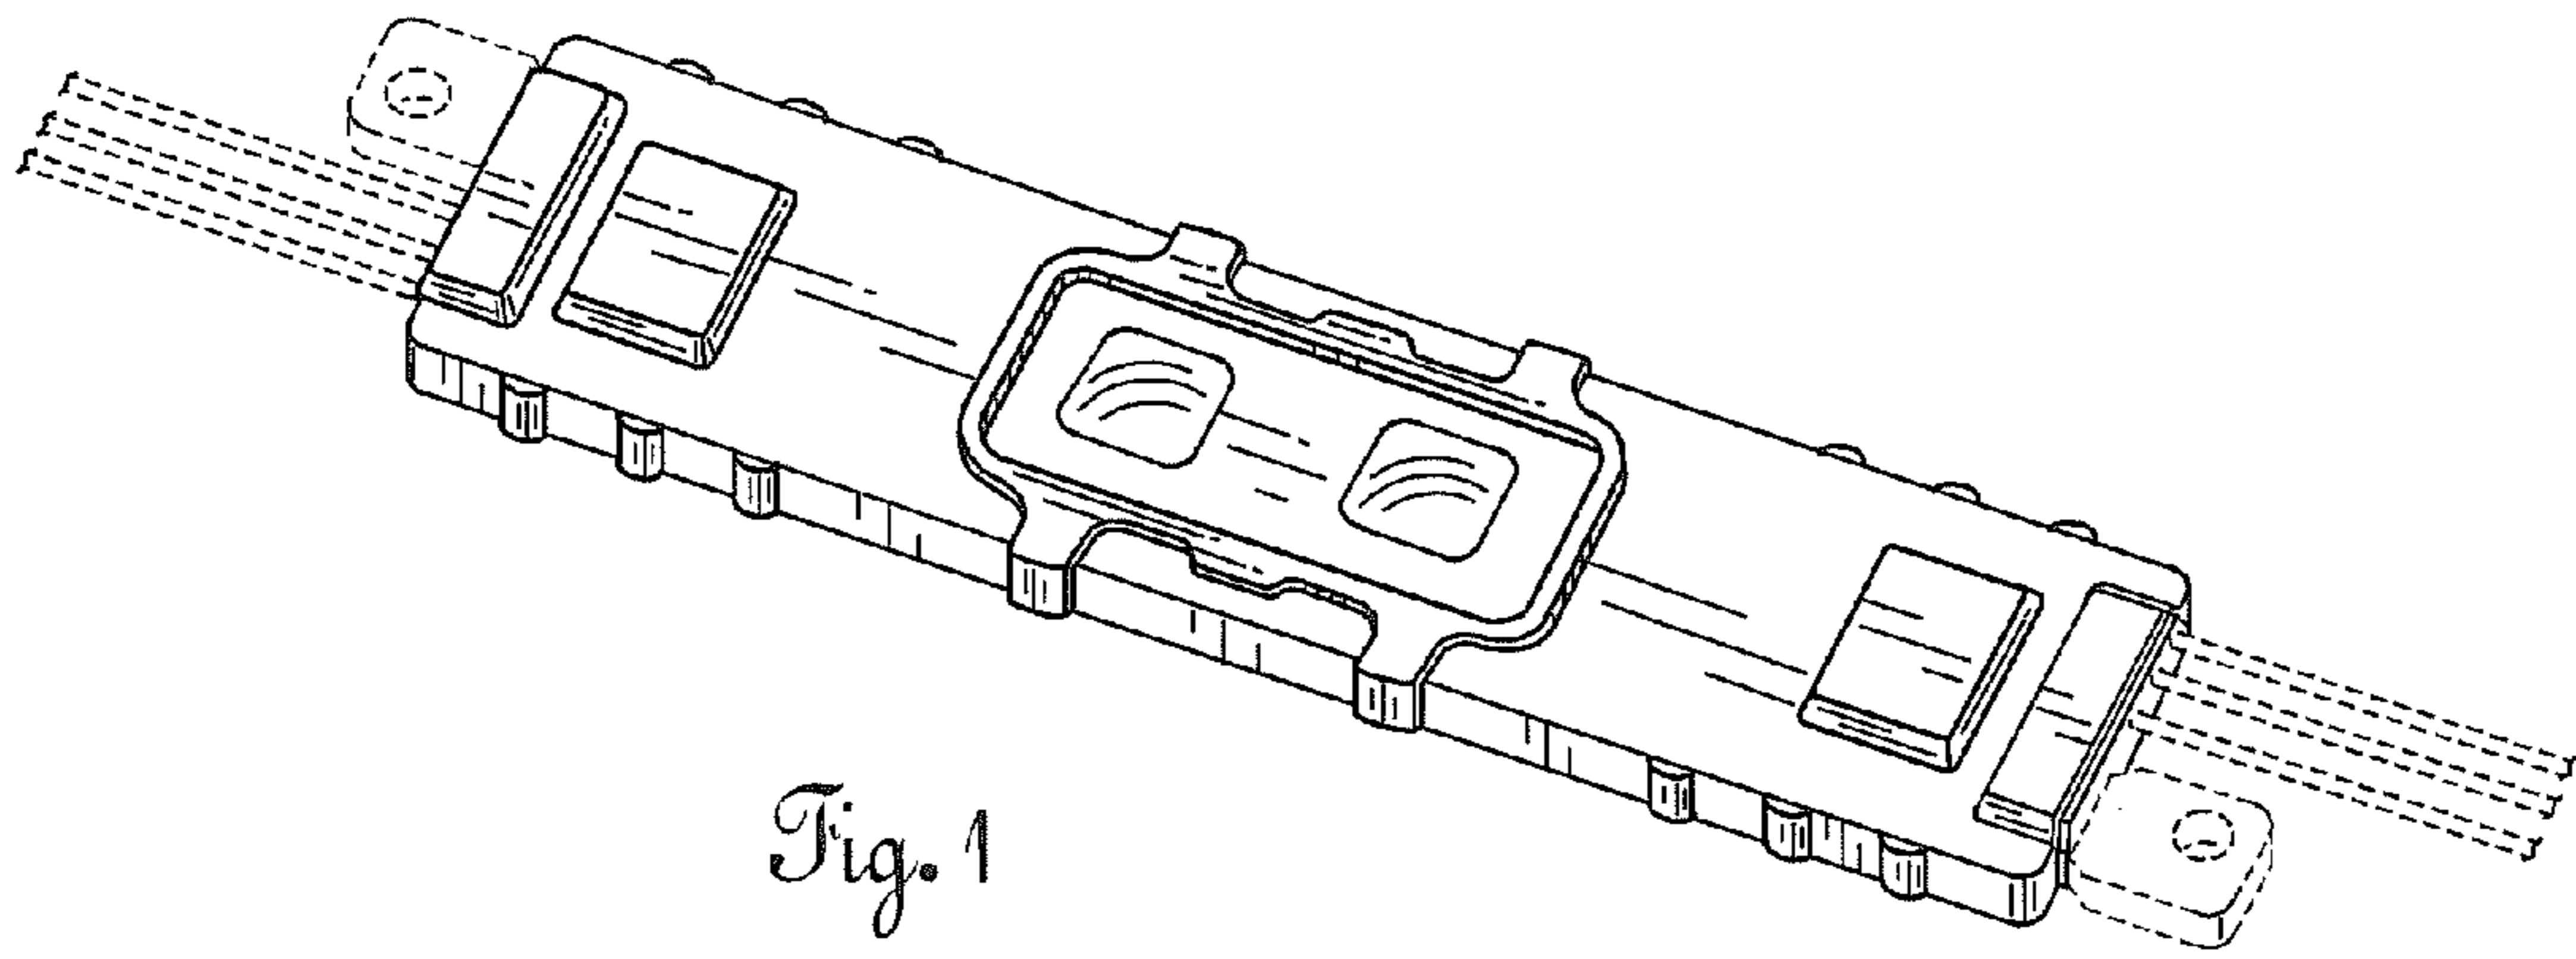

FIG. 1 is a perspective view of an LED module showing my new design;  
FIG. 2 is a top plan view thereof;  
FIG. 3 is a front and rear elevational view thereof;  
FIG. 4 is a left and right side elevational view thereof; and,  
FIG. 5 is a bottom plan view thereof.

The broken lines shown on the drawing views are for the purpose of illustrating environmental structure and form no part of the claimed design.

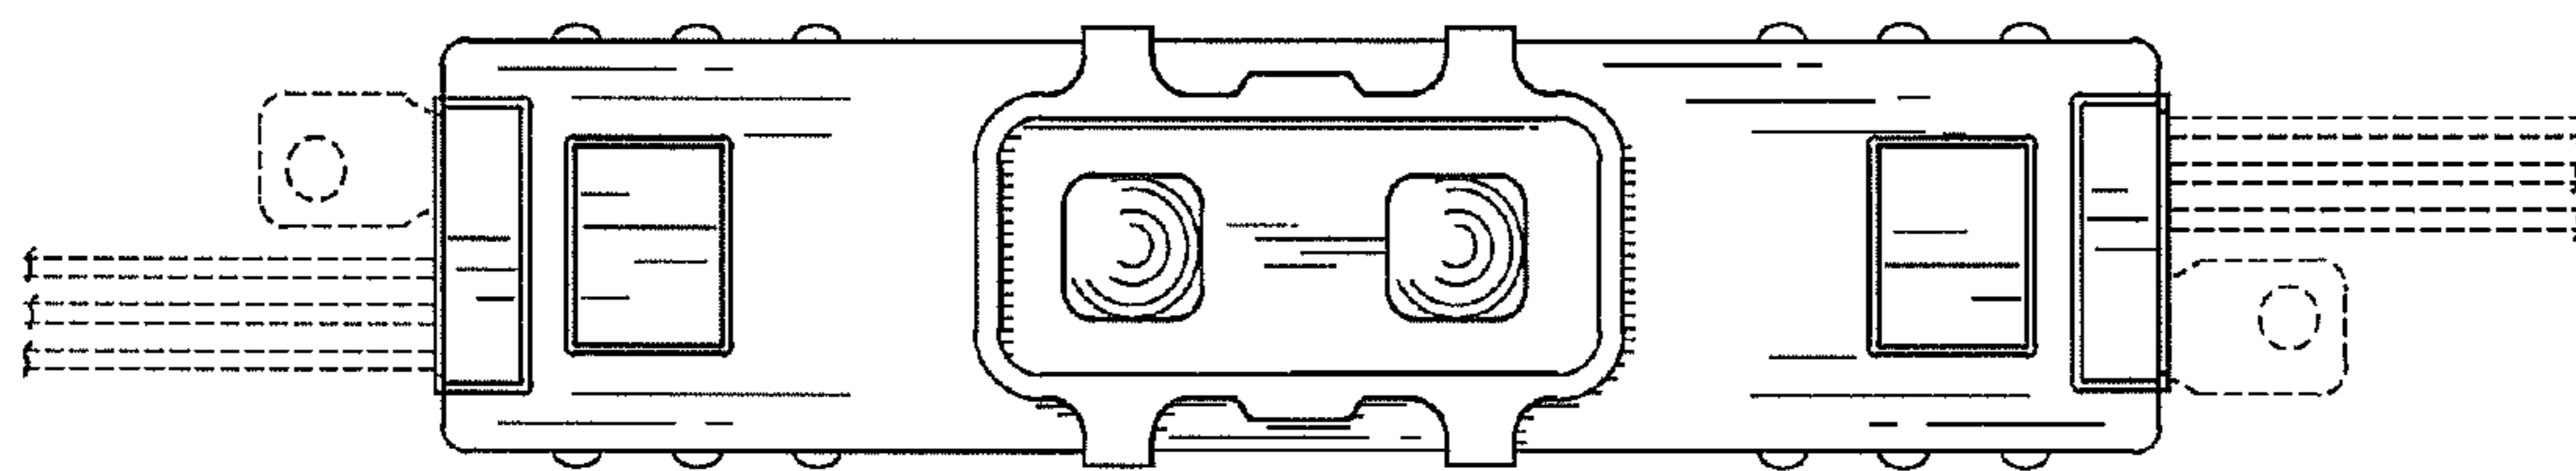

The ornamental design for the LED Module of the present invention is used on a mounting system and enclosure for a printed circuit board on which one or more light emitting diodes are electrically mechanically positioned and electrically connected. In a typical application, LED modules are connected, one to another, by wires and placed within a box sign or within channel letters for illumination of the box sign or channel letters.
