See application file for complete search history.

FIG. 1 is a front view of a display screen for a medical device with transitional graphical user interface showing a first image in a sequence for an animated user interface showing my new design.

FIG. 2 is a front view thereof showing a second image in the sequence.

FIG. 3 is a front view thereof showing a third image in the sequence.

FIG. 4 is a front view thereof showing a fourth image in the sequence; and,

FIG. 5 is a front view thereof showing a fifth image in the sequence.

The outer solid line perimeter in the figures represents both the boundaries of the display screen and the transitional graphical user interface. This outer edge of the portion of the display screen is understood to be congruent with the outer edge of the transitional graphical user interface.

The appearance of the graphical user interface sequentially transitions between the images shown in FIGS. 1-5. The process or period in which one image transitions to another forms no part of the claimed design.
