G01C 5/16  
See application file for complete search history.

FIG. 1 is a front perspective view of an eyeglass or components thereof showing an embodiment of my new design in which the different shading techniques including the line shading in some areas and the different stippling effects in other areas of the eyeglass or components thereof do not represent a contrast in appearance and do not represent any specific color, texture and/or material. In other embodiments, the different shading techniques do represent a contrast in appearance, and are each intended to represent a specific color, texture and/or material. For example, the line shading along a posterior portion of the temples can denote a plastic material, the lower-density stippling effect along the eyeglass face and the length of the temples can denote a carbon fiber composite material, and the higher-density stippling effect at the hinges can denote a metal material (e.g., stainless steel or titanium);  
FIG. 2 is a front elevational view thereof;  
FIG. 3 is a rear elevational view thereof;  
FIG. 4 is a left side elevational view thereof, the right side elevational view being a minor image thereof;  
FIG. 5 is a top plan view thereof; and  
FIG. 6 is a bottom plan view thereof.  
FIG. 7 is a front perspective view of an eyeglass or components thereof showing an embodiment of my new design in which the different shading techniques including the line shading in some areas and the different stippling effects in other areas of the eyeglass or components thereof do not represent a contrast in appearance and do not represent any specific color, texture and/or material. In other embodiments, the different shading techniques do represent a contrast in appearance, and are each intended to represent a specific color, texture and/or material. For example, the line shading along a posterior portion of the temples can denote a plastic material, the lower-density stippling effect along the length of the temples can denote a carbon fiber composite material, and the higher-density stippling effect at the hinges can denote a metal material (e.g., stainless steel or titanium);  
FIG. 8 is a front elevational view thereof;  
FIG. 9 is a rear elevational view thereof;  
FIG. 10 is a left side elevational view thereof, the right side elevational view being a mirror image thereof;  
FIG. 11 is a top plan view thereof; and  
FIG. 12 is a bottom plan view thereof.  
The broken lines in the Figures show portions of the eyeglass which form no part of the claimed design.
