(57) **CLAIM**

The ornamental design for a spent cartridge collector, substantially as shown and described above.

DESCRIPTION

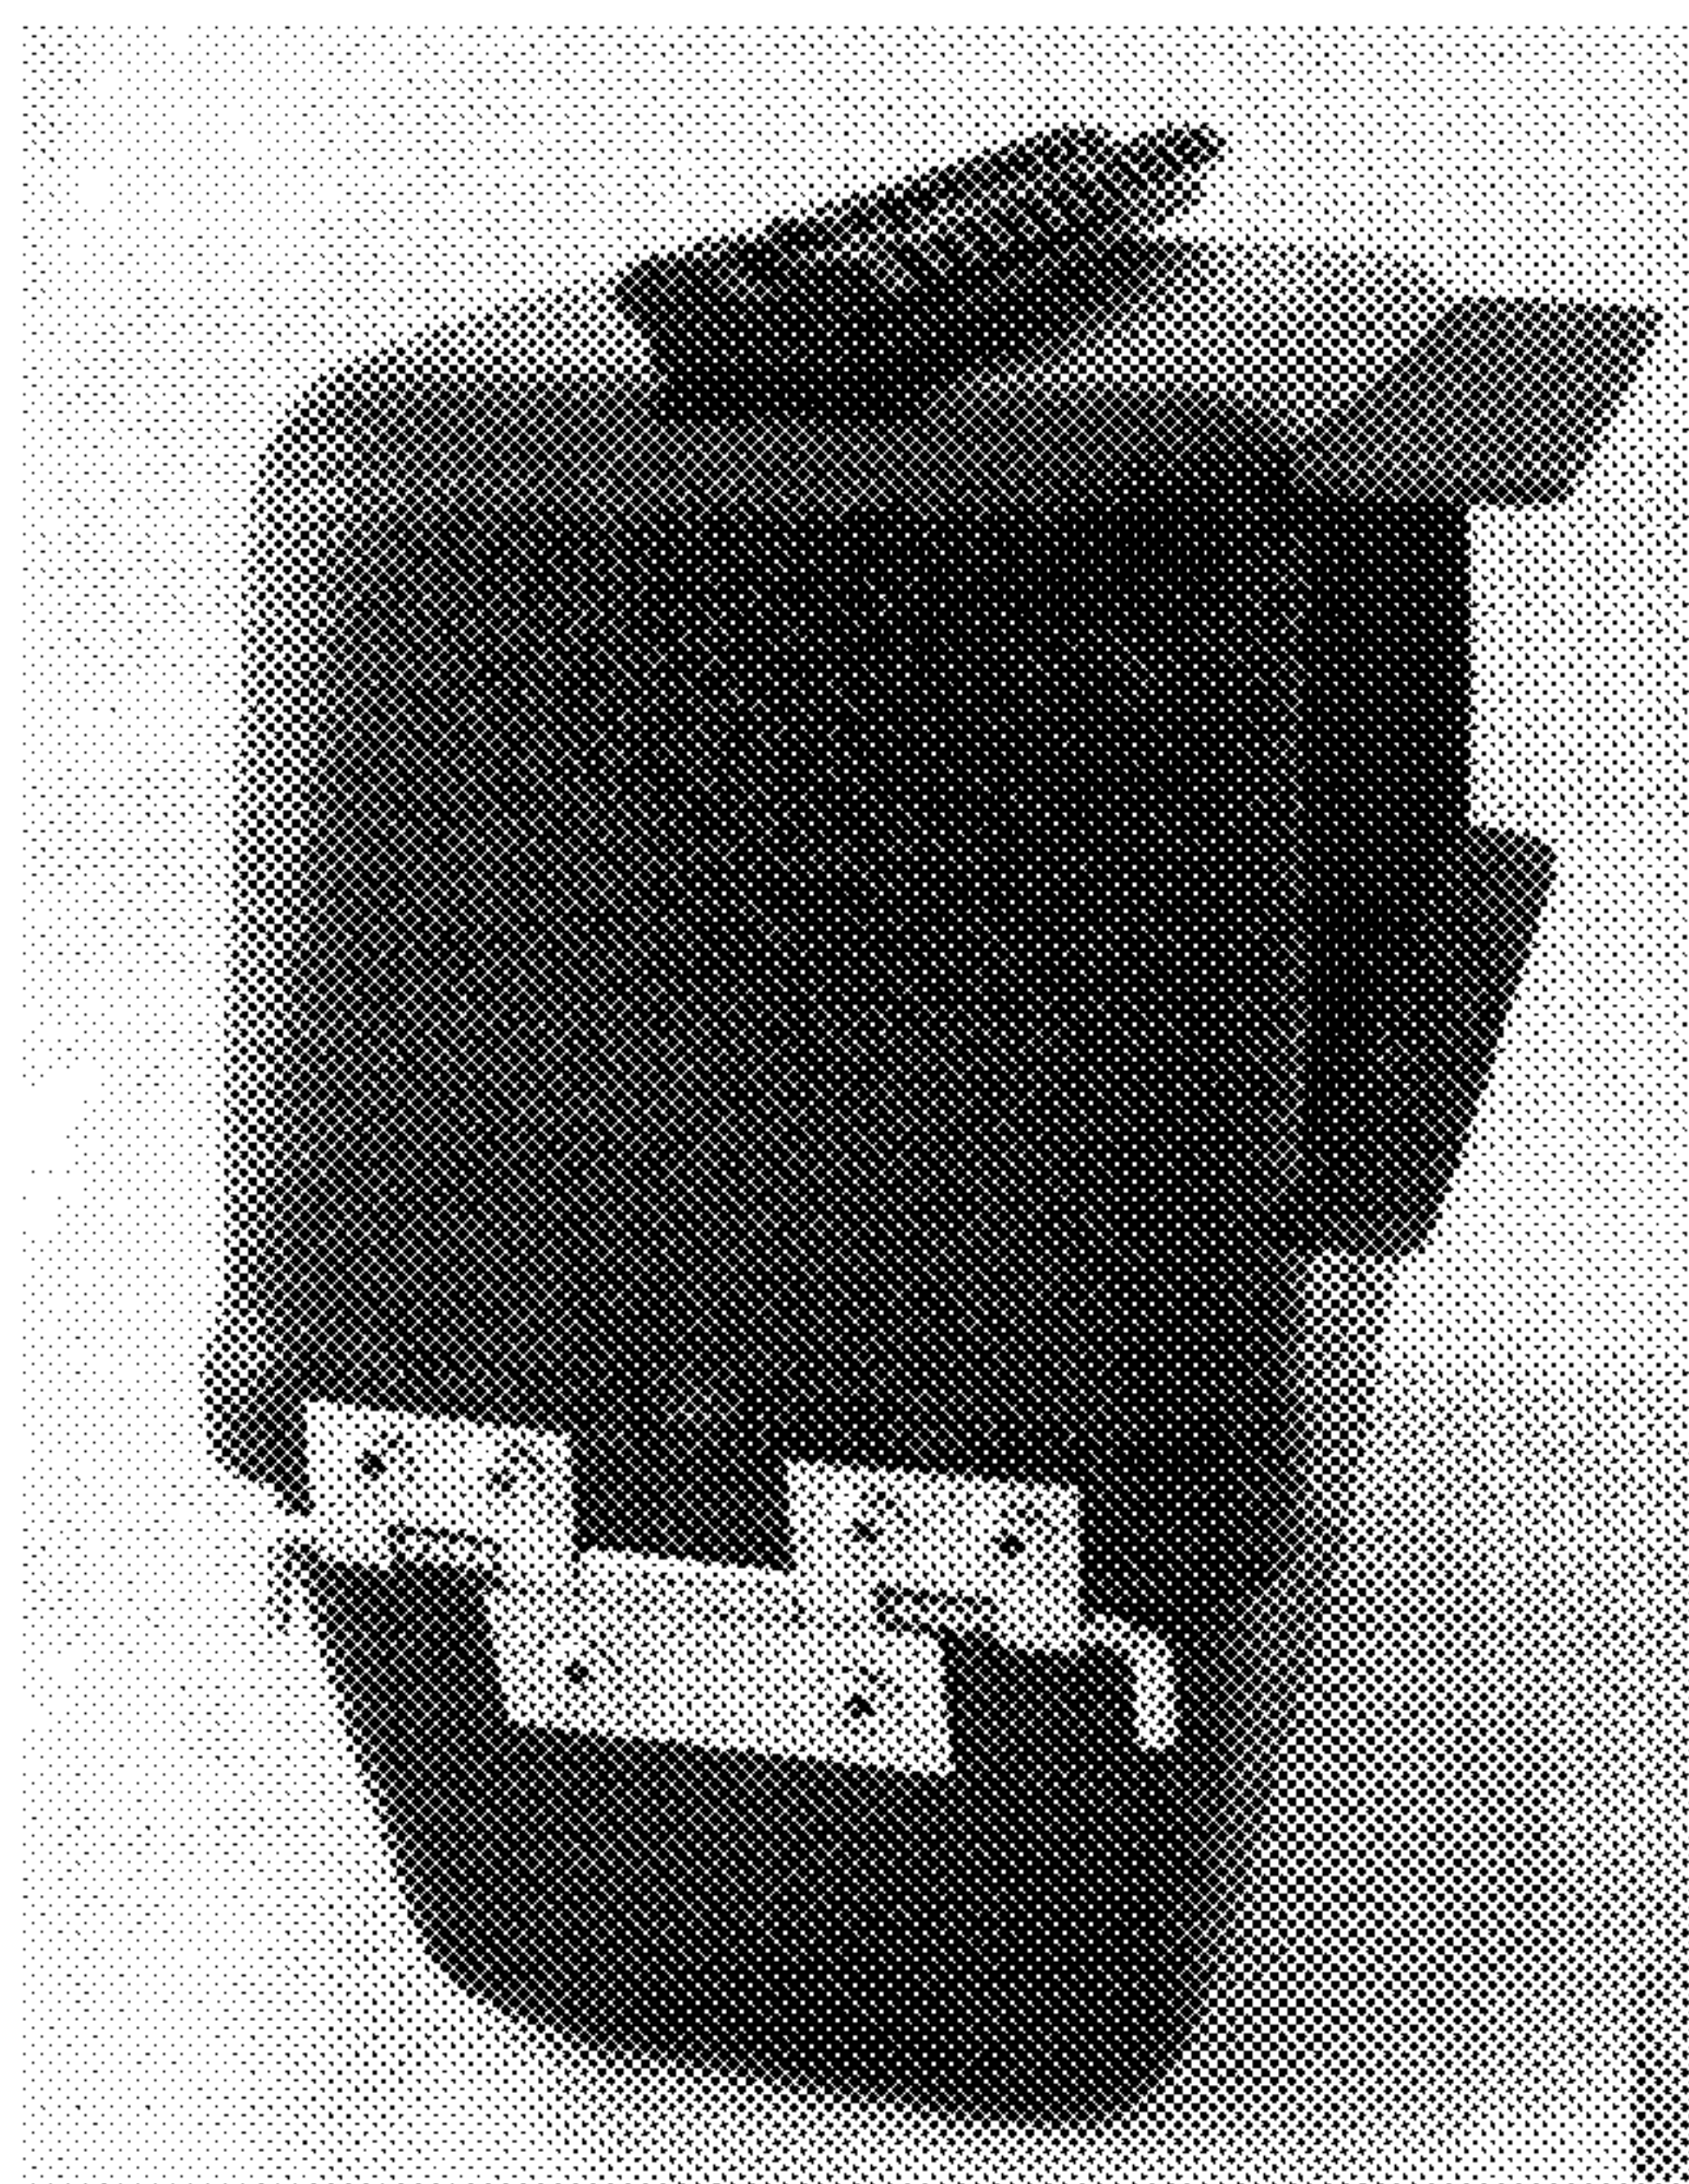

FIG. 1 shows a front, right, upper perspective view of a spent cartridge collector according to the present invention, the bottom and left side portions of the collector forming no part of the claimed design.

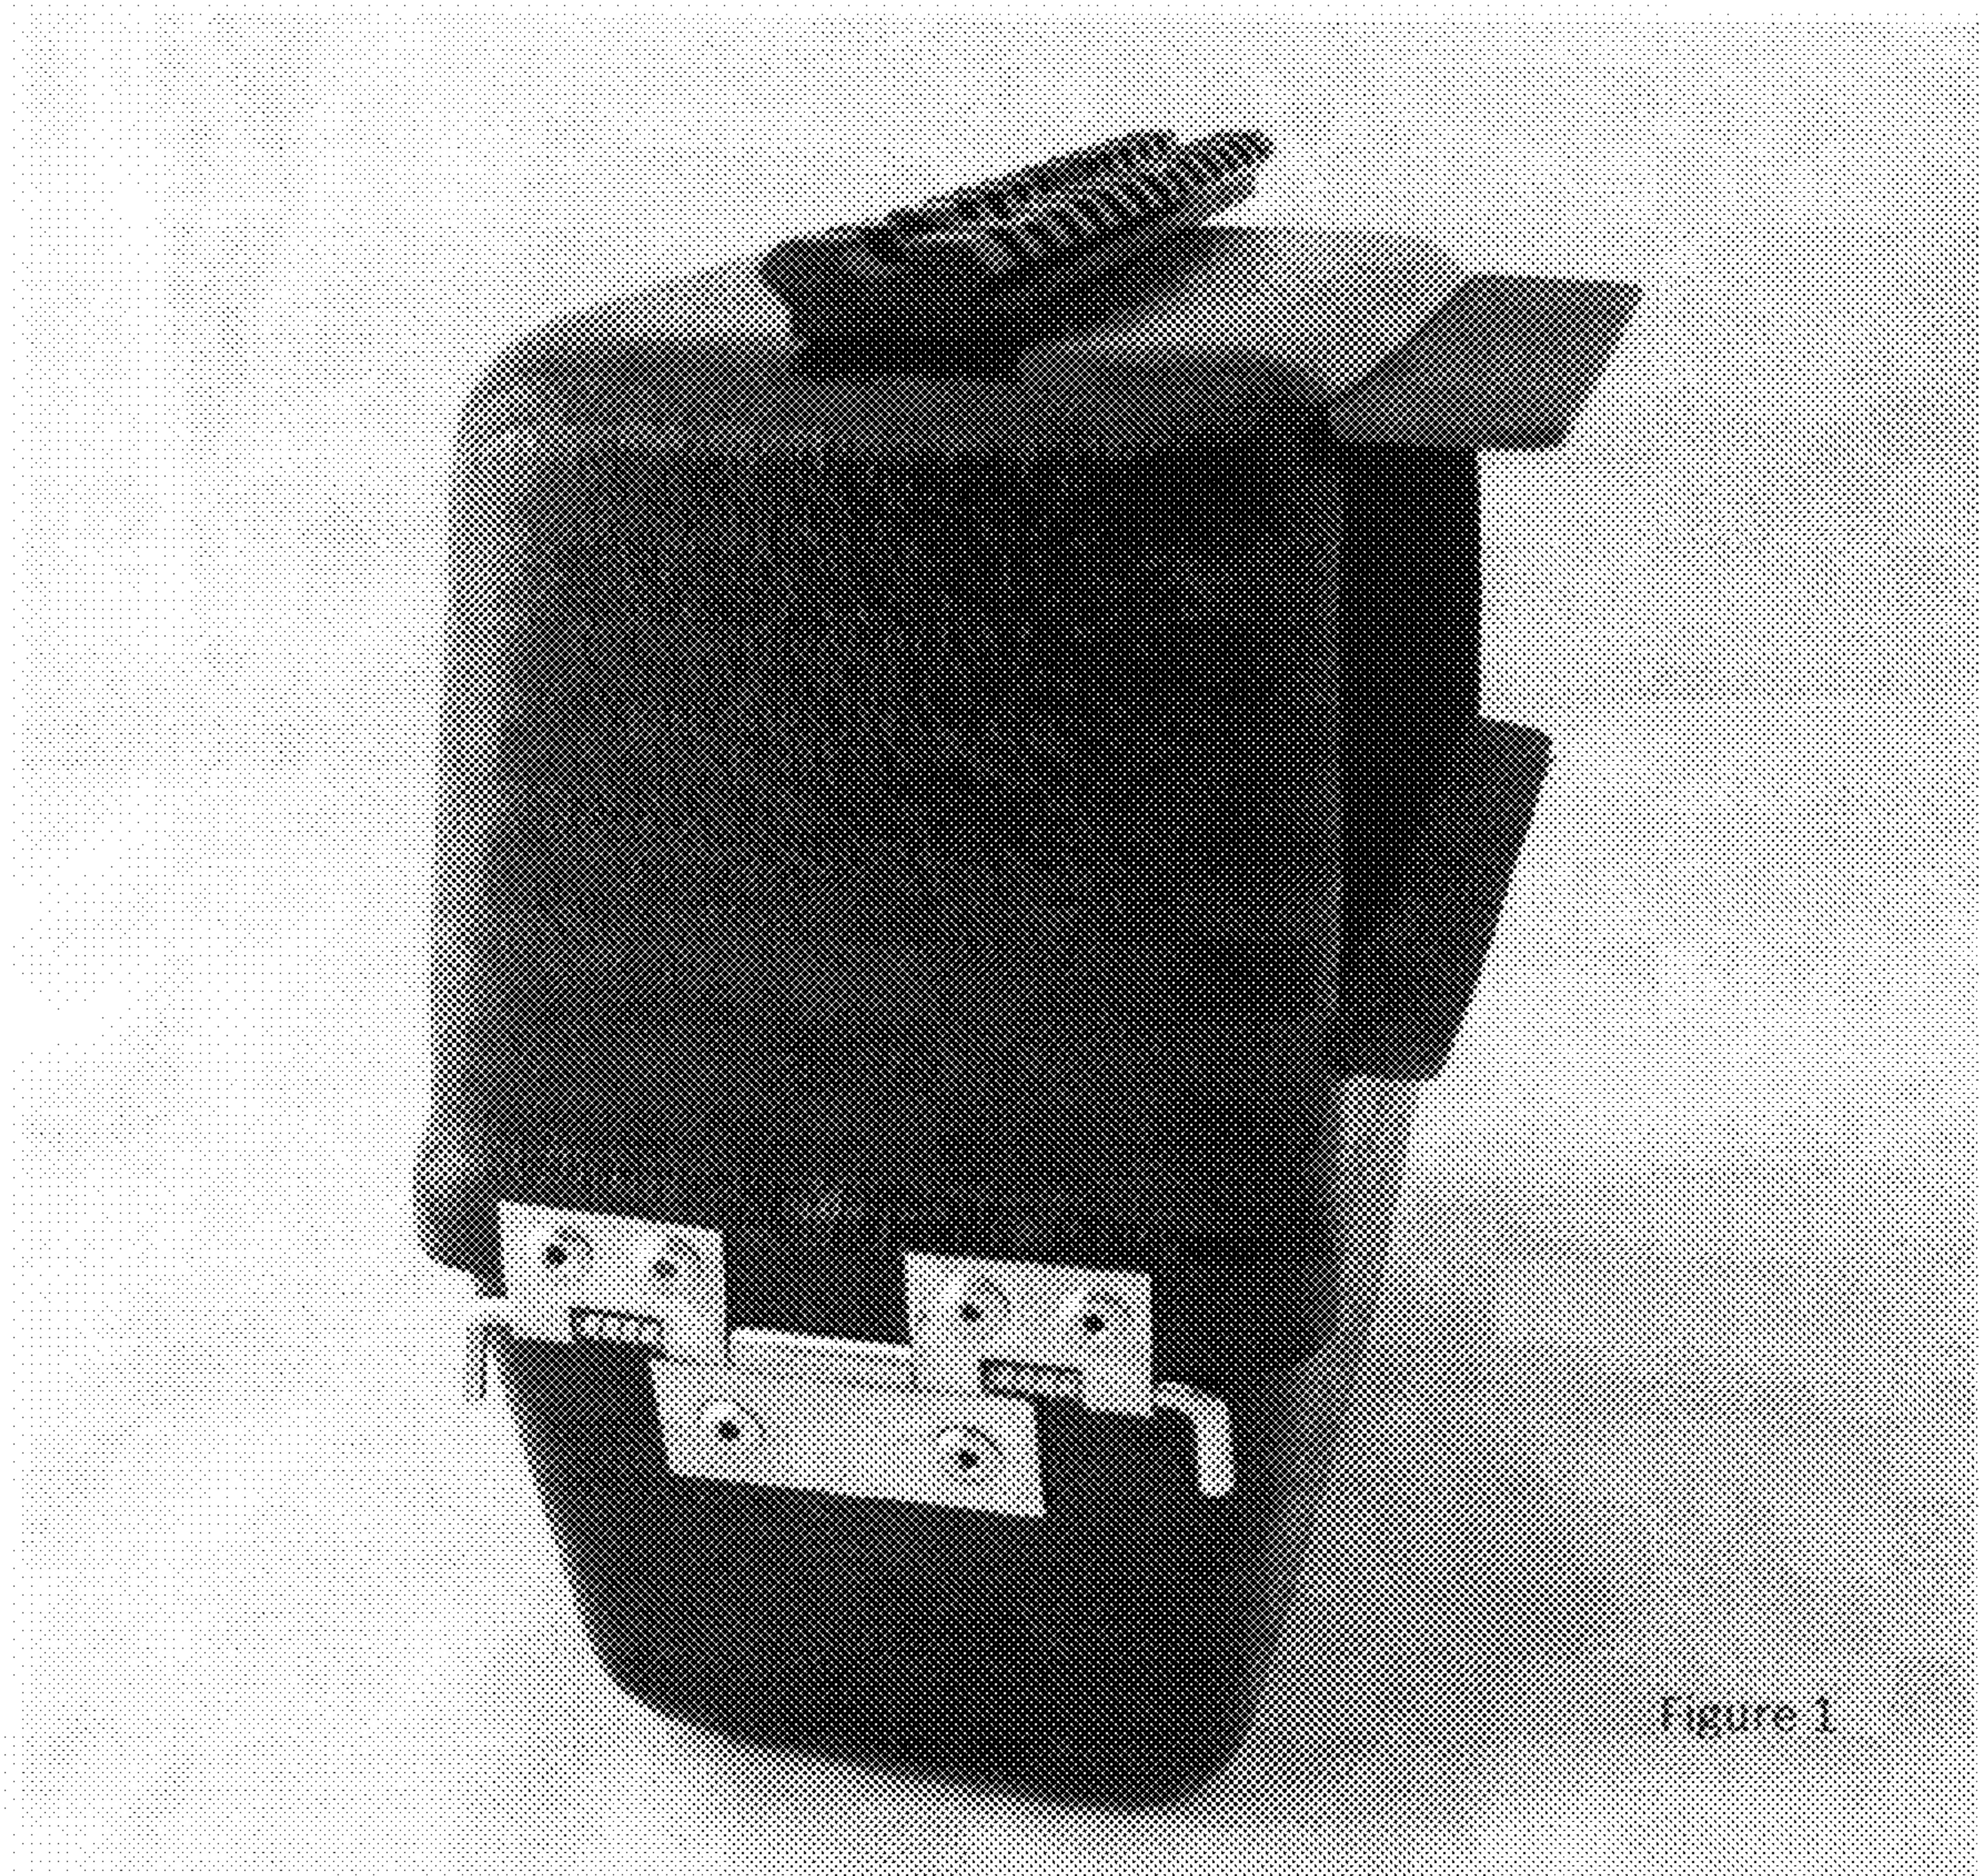

FIG. 2 shows a rear, right, upper perspective view of the embodiment of FIG. 1; and,

FIG. 3 shows a front, right, upper perspective view of the disassembled embodiment of FIG. 1.

The present invention comprises a spent cartridge collector which is intended to be mounted to the side of a firearm, such as an AR-15, aligned to receive spent cartridges ejected from that firearm. The drawings show only a “best mode” embodiment. The specific mounting rail and apparatus for connecting the collector to the firearm, and the specific hinge and latch mechanisms joining the portions of the collector together, form no portion of the claimed design. Further, the extent of projection of the lower ledge of the collector opening for receiving spent cartridges forms no portion of the claimed design, as it can be varied according to the particular firearm being used.
