(57) **CLAIM**

The ornamental design for an instrument for determining the size and dimension of varying widgets, as shown and described.

**DESCRIPTION**

FIG. 1 is an isometric view of the interior of the instrument case from above depicting the case in an open configuration. FIG. 2 is an isometric view of the exterior of the instrument case from above depicting the case in an open configuration. FIG. 3 is a top view of the interior of the instrument case depicting the case in an open configuration. FIG. 4 is a top view of the exterior of the instrument case depicting the case in an open configuration. FIG. 5 is a side view of the instrument case viewed from the right or left and depicting the case in an open configuration. FIG. 6 is a side view of the instrument case viewed from the bottom or top of the open instrument case and depicting the case in an open configuration. FIG. 7 is an isometric view of the exterior of the instrument case from above on a first exterior side depicting the case in a closed configuration; and, FIG. 8 is an isometric view of the exterior of the instrument case from above on a second exterior side depicting the case in a closed configuration.

The broken line showing of structural features is included for the purpose of illustrating non-claimed subject matter and forms no part of the claimed design.

The article that is the subject of the now disclosed inventive design is an instrument in the form of a case having multiple tools and gauges integrated within the interior and exterior panels of the case, the tools and gauges serving the purpose of determining the size and dimension of a multitude of varying widgets, including without limitation nuts, bolts and bits.
