(57) **CLAIM**

The ornamental design for a vibration recording device, as shown and described.

DESCRIPTION

FIG. 1 is a perspective view of a vibration recording device in accordance with the present design. The vibration recording device is adapted to allow a user to collect vibration recordings associated with vibrating machines. The vibration recording includes three sensor cable connectors, a magnetized surface onto which a magnetic vibration sensor may be removably coupled, and at least two corner posts to which a strap may be connected. Broken lines in FIG. 1 indicate structure which forms no part of the claimed design.

FIG. 2 is a bottom plan view of the vibration recording device shown in FIG. 1.

FIG. 3 is a top plan view of the vibration recording device shown in FIG. 1.

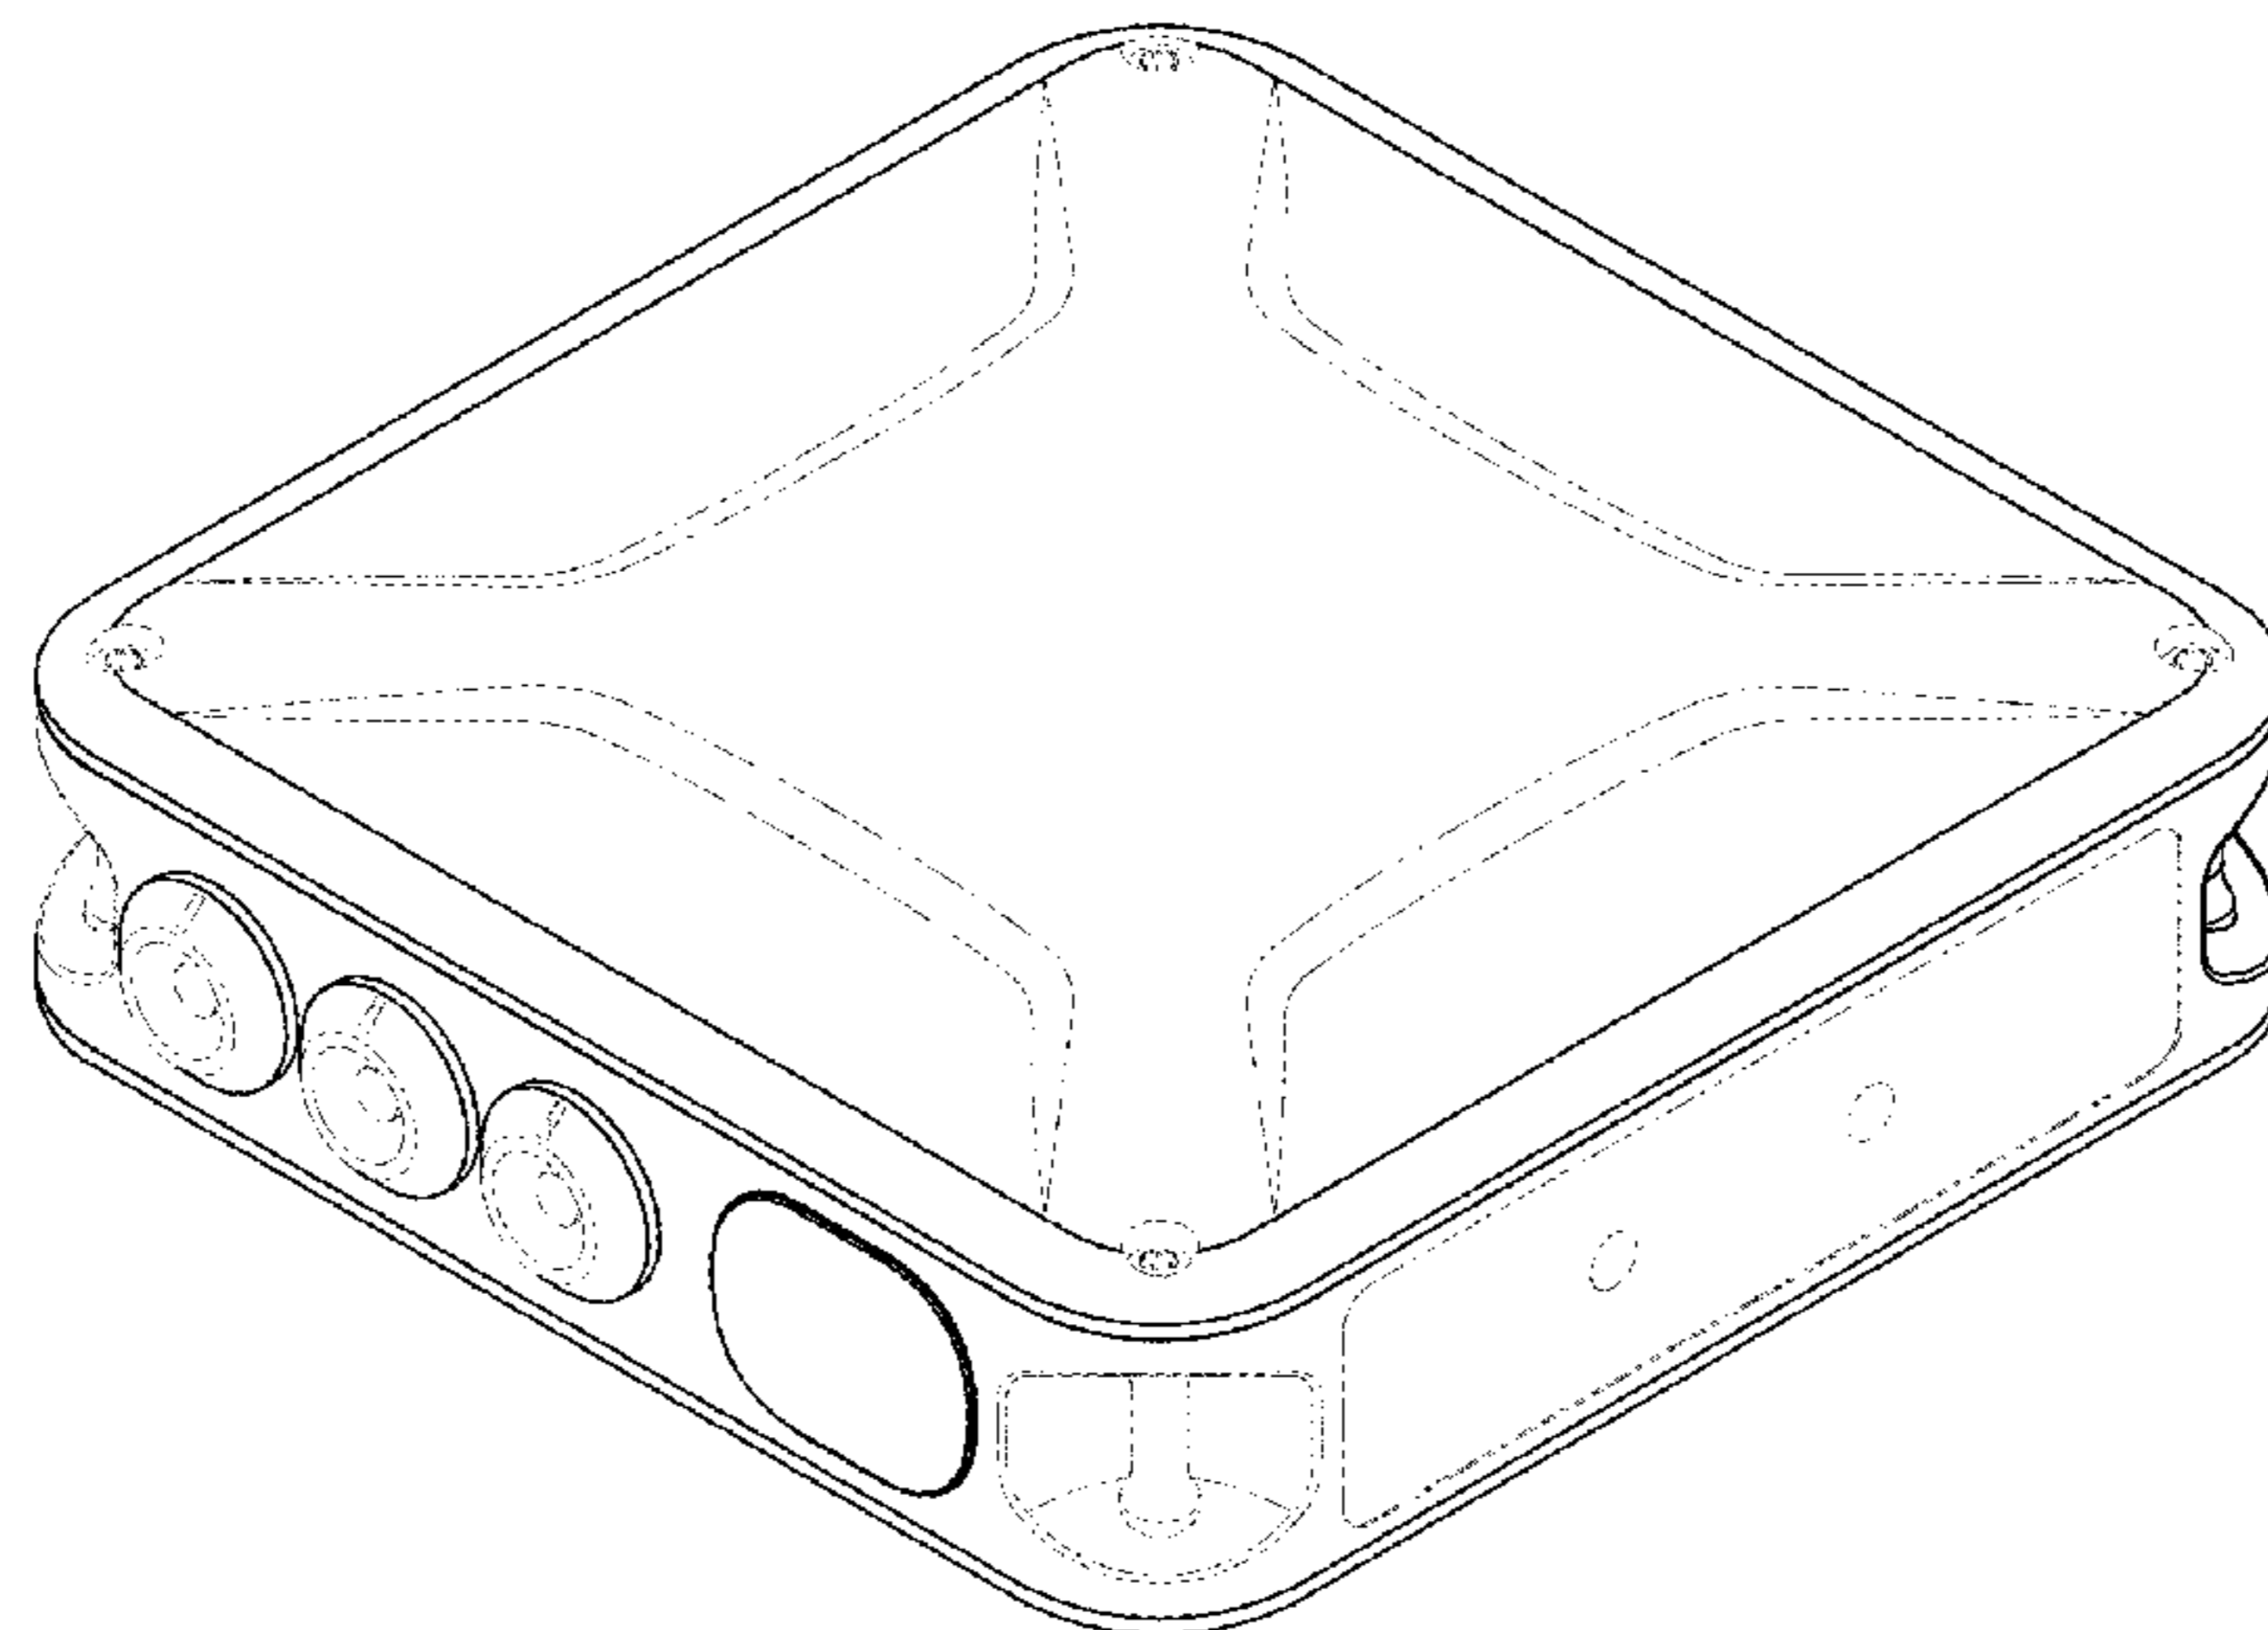

FIG. 4 is a right side elevational view of the vibration recording device shown in FIG. 1, and the left side elevational view is a mirror image of the right side elevational view.

FIG. 5 is a front plan view of the vibration recording device shown in FIG. 1; and,

FIG. 6 is a rear plan view of the vibration recording device shown in FIG. 1.

The broken line showing of structure features is included for the purpose of illustrating non-claimed subject and forms no part of the claimed design.
