(57) **CLAIM**

The ornamental design for a massage tool, as shown and described.

DESCRIPTION

FIG. 1 is a perspective view of the massage tool showing my new design.

FIG. 2 is a back side elevation view of the massage tool.

FIG. 3 is a top view of the massage tool.

FIG. 4 is a bottom view of the massage tool; and,

FIG. 5 is a lateral side view of the massage tool.

This invention is a flexible massage tool that will help release tension around the abdomen and specifically the psoas and iliac muscles. The tool comprises a top extension, a round base, a sloped and lipped side. The top extension is used to massage portions of the abdomen and to reach the psoas and iliac muscles that are deep within the body structure. Gravity and body weight can be used to engage the device. In use, the user can rest the abdomen gently on the top extension of the tool and make slight rocking motions with the round base. The base can also be held with the hands. The user can rest the lipped surface on the lower abdomen and use similar rocking motions to massage the psoas and iliac muscles.
