(57) **CLAIM**

I claim the ornamental design for an optical transmission-conversion device for producing a magnified image, as shown and described.

DESCRIPTION

FIG. **1** is a front perspective view from one side of an optical transmission-conversion device for producing a magnified image according to the present invention, illustrating a controller thereof in a storage position.

FIG. **2** is a left side elevational view of the optical transmission-conversion device for producing a magnified image of FIG. **1**.

FIG. **3** is a right side elevational view of the optical transmission-conversion device for producing a magnified image of FIG.

FIG. **4** is a top plan view of the optical transmission-conversion device for producing a magnified image of FIG. **1**.

FIG. **5** is a rear perspective view, from the bottom, of the optical transmission-conversion device for producing a magnified image of FIG. **1**; and,

FIG. **6** is another front perspective view of the optical transmission-conversion device for producing a magnified image of FIG. **1**, illustrating the controller removed from the storage position and environmental structure in the form of a monitor mounted thereto.

Features illustrated in broken lines in the Figures depict environmental structure only and form no part of the claimed design.

1 Claim, 6 Drawing Sheets
