The claimed design of the multi-tool serves the purpose of  
offering multiple functionalities to the user, in one product  
(1), for handling food while preparing or serving food. The  
functionalities of the multi-tool comprise a spatula, tong,  
toothed tong, fork and a releasing mechanism. The releasing  
mechanism enables the user to pierce food on the fork and  
gently release it from the fork by pressing down the upper  
handle of the multi-tool. While pressing down the upper  
handle, the upper half of the (toothed) tong slides over the  
fork, therewith pushing it off the fork.
