U.S. PATENT DOCUMENTS

3,070,275 A * 12/1962 Bostrom B65D 51/28
220/500**DESCRIPTION**

FIG. 1 is an assembled perspective view of a compartmented packaging for foodstuffs showing my new design; and, FIG. 2 is an exploded perspective view thereof showing the compartmented packaging for foodstuffs from the top and front of the design.

Rear, right and left side views are omitted because the rear, right and left sides are identical to the front.

The bottom of the compartmented packaging for foodstuffs can be seen in the perspective view since a main portion of the compartmented packaging for foodstuffs is transparent. In this design, a container holding in its interior a basin of lesser height and cross-section similar to that of its upper portion is presented. The container holding in its interior a first product, whilst the basin, positioned at the upper portion of the container, holds a second product. The combination is closed by a closing lid. The basin is positioned at the internal, upper portion of the container, thanks to a perimeter flap located at its open upper base, which is directed outwards and settles on the open upper base of the container.
