(57) **CLAIM**
The ornamental design for a display screen with level detecting icon, as shown and described.

DESCRIPTION
FIG. 1 is a front view of the first image of a display screen with level detecting icon showing our new design, wherein the display screen indicates the condition that the camera is not inclined in any directions;
FIG. 2 is a front view of the second image thereof, wherein the display screen indicates the condition that the camera is horizontally panned (swinging);
FIG. 3 is a front view of the third image thereof, wherein the display screen indicates the condition that the camera is tilted;
FIG. 4 is a front view of the fourth image thereof; wherein the display screen indicates the condition that the camera is tilted forwardly;
FIG. 5 is a front view of the fifth image thereof; wherein the display screen indicates the condition that the camera is tilted backwardly;
FIG. 6 is a front view of the sixth image thereof; wherein the display screen indicates the condition that the camera is inclined in every direction;
FIG. 7 is a front view showing an example of the display screen of FIG. 1 in an alternate environment, thereof; and, FIG. 8 is a front view showing an example of the display screen of FIG. 6 in an alternate environment, thereof.
The subject matter in the patent includes a process or period in which an image changes into another image. This process or period forms no part of the claimed design.
The broken lines showing a display screen, camera and additional environment form no part of the claimed design.
