(57) **CLAIM**

The ornamental design for a patient gown, as shown and described.

DESCRIPTION

FIG. 1 is a black and white photograph of a front view of the patient gown on a manikin having a left and a right torso portion with a chest access seam therebetween in a closed

configuration, a left and right sleeve each with an arm access seam in a closed configuration, and a lower body portion with a front lower body access seam in a closed configuration and the torso portion attached to the lower body portion; FIG. 2 is a black and white photograph of a front view of the patient gown on a manikin having a torso portion with the chest access seam in an closed configuration, a left and right sleeve each with an arm access seam in a closed configuration, and a lower body portion with the front lower body access seam in an open configuration;

FIG. 3 is a black and white photograph of a front view of the patient gown on a manikin having a torso portion with the chest access seam in an open configuration, a left and right sleeve each with an arm access seam in a closed configuration, and a lower body portion with the front lower body access seam in a closed configuration;

FIG. 4 is a black and white photograph of a front view of the patient gown on a manikin having a torso portion with the chest access seam in an open configuration, a left and right sleeve each with an arm access seam in a closed configuration, and a lower body portion with the front lower body access seam in an open configuration;

FIG. 5 is a black and white photograph of a right-side view of the patient gown on a manikin having a right sleeve in a closed configuration.

FIG. 6 is a black and white photograph of a right-side view of a portion of the patient gown on a manikin having a right sleeve having an arm access seam in a closed configuration. FIG. 7 is a black and white photograph of a right-side view of a portion of the patient gown on a manikin having a right sleeve having an arm access seam in a partially open configuration.

FIG. 8 is a black and white photograph of a right-side view of a portion of the patient gown on a manikin having a right sleeve having an arm access seam in a partially open configuration.

FIG. 9 is a black and white photograph of a right-side view of the patient gown on a manikin having a right sleeve having an arm access seam in a fully open configuration.

FIG. 10 is a black and white photograph of a right-side view of a portion of the patient gown on a manikin having a right sleeve having an arm access seam in a fully open configuration.

(Continued)

FIG. 11 is a black and white photograph of a left-side view of the patient gown on a manikin having a left sleeve having an arm access seam in a closed configuration.

FIG. 12 is a black and white photograph of a left-side view of a portion of the patient gown on a manikin having a left sleeve having an arm access seam in a closed configuration.

FIG. 13 is a black and white photograph of a left-side view of a portion of the patient gown on a manikin having a left sleeve having an arm access seam in a partially open configuration.

FIG. 14 is a black and white photograph of a left-side view of a portion of the patient gown on a manikin having a left sleeve having an arm access seam in a partially open configuration.

FIG. 15 is a black and white photograph of a left-side view of the patient gown on a manikin having a left sleeve having an arm access seam in a fully open configuration.

FIG. 16 is a black and white photograph of a left-side view of a portion of the patient gown on a manikin having a left sleeve having an arm access seam in a fully open configuration.

FIG. 17 is a black and white photograph of a back view of a portion of the patient gown on a manikin having a back access seam in a closed configuration.

FIG. 18 is a black and white photograph of a back view of the patient gown on a manikin having a back access seam in a partially open configuration.

FIG. 19 is a black and white photograph of a back view of the patient gown on a manikin having a back access seam in a partially open configuration.

FIG. 20 is a black and white photograph of a back view of the patient gown on a manikin having a back access seam in a fully open configuration.

FIG. 21 is a black and white photograph of a left-side perspective view of the patient gown on a manikin having a right torso portion in an open configuration and a left torso portion in a closed configuration.

FIG. 22 is a black and white photograph of a left-side perspective view of the patient gown on a manikin having both the left and right torso portions in an open configuration.

FIG. 23 is a black and white photograph of a right-side perspective view of the patient gown on a manikin having a right torso portion in a closed configuration.

FIG. 24 is a black and white photograph of a right-side perspective view of the patient gown on a manikin having a right torso portion in an open configuration and a left side torso portion in a closed configuration.

FIG. 25 is a black and white photograph of a back view of the patient gown on a manikin having a back access seam in a closed configuration.

FIG. 26 is a black and white photograph of a back view of the patient gown on a manikin having a back access seam in a partially open configuration; and,

FIG. 27 is a black and white photograph of a back view of the patient gown on a manikin having a back access seam in a fully open configuration.
