See application file for complete search history.

FIG. 1 is a front view of a first image in a sequence for a display screen with a transitional graphical user interface for a photo album showing our new design; FIG. 2 is a front view of the second image thereof; and, FIG. 3 is a front view of the third image thereof.

The broken line showing the display screen and the remainder of the graphical user interface forms no part of the claimed design.

The subject matter of this patent includes a process or period in which a transitional image sequentially transitions into another image. This process or period forms no part of the claimed design. The appearance of the transitional image transitions sequentially between the images shown in FIGS. 1, 2, and 3.

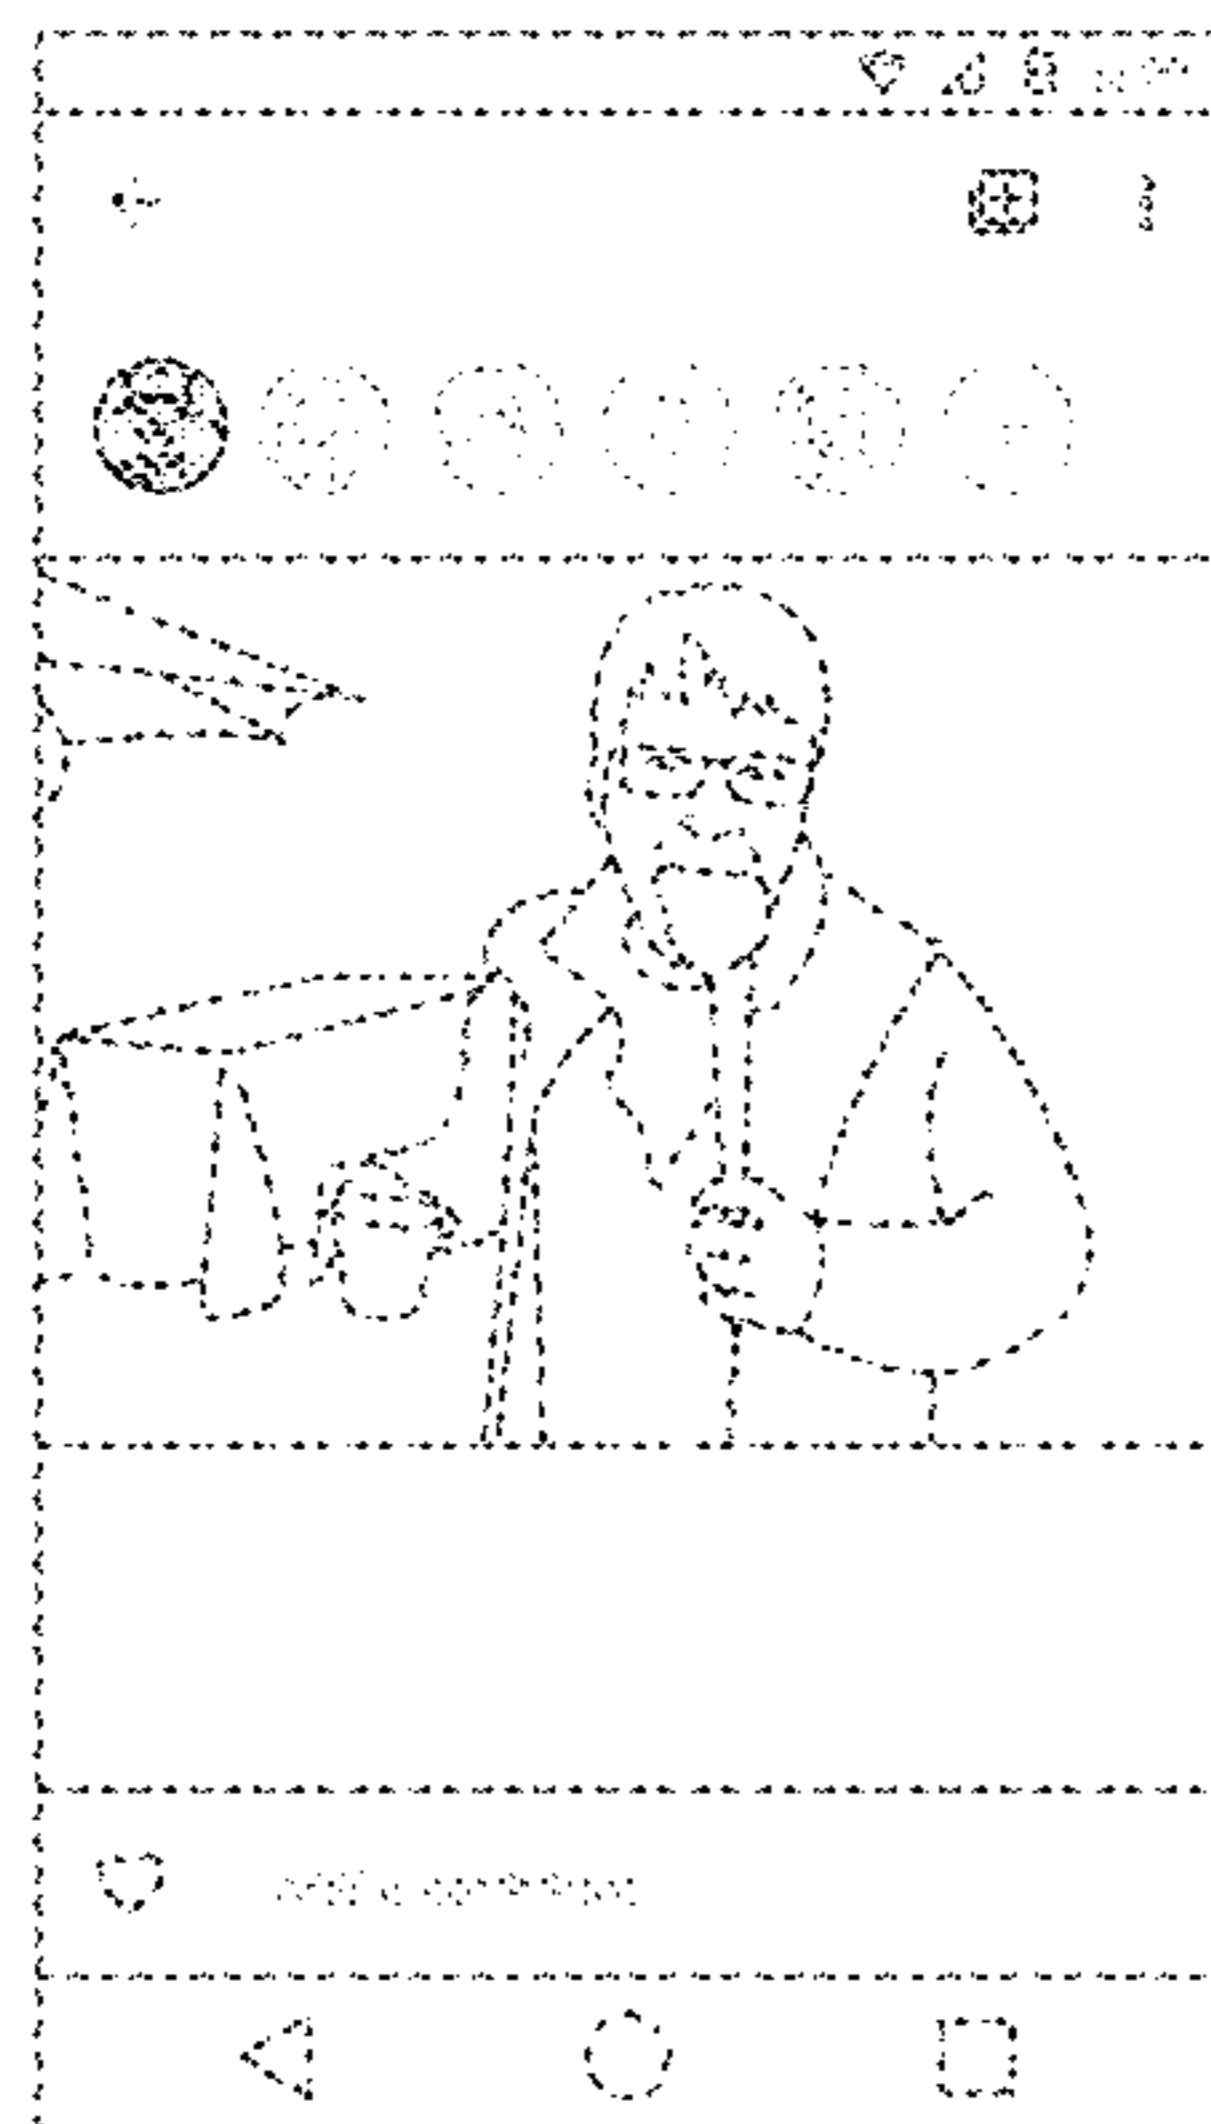

While the disclosed subject matter has been described in conjunction with a number of example sequential image transition implementations, Applicants intend to embrace many alternative sequential image transition implementations that are within the spirit and scope of the disclosed subject matter.
