DESCRIPTION

FIG. 1 is a front view of a display screen portion with a transitional graphical user interface component showing a first image in a sequence of a first embodiment of our invention;

FIG. 2 is a front view of a display screen portion with a transitional graphical user interface component showing a second image in the sequence of the first embodiment of our invention;

FIG. 3 is a front view of a display screen portion with a transitional graphical user interface component showing a first image in the sequence of a second embodiment of our invention; and,

FIG. 4 is a front view of a display screen portion with a transitional graphical user interface component showing a second image in the sequence of the second embodiment of our invention.

The subject matter in this patent includes a process or period in which an image changes into another image. This process or period forms no part of the claimed design.

The half-tone markings and stippling in the drawings indicate contrasts of appearance. The elongated line, broken in part, which extends along a lower margin of the card, is part of the claimed design.

The longer-incremented broken lines showing of a portion of a display screen of a communications terminal illustrate environment and form no part of the claimed design. The medium-incremented broken line illustrates environmental structure (e.g., a bar chart) which forms no part of the claimed design. The text shown in finer-incremented broken lines illustrate features that form no part of the claimed design, and are intended to illustrate an optional, environmental information which can be omitted, with the under-
