(57) **CLAIM**

The ornamental design for an adhesive ring device, as shown and described.

DESCRIPTION

FIG. 1 is a perspective view of an adhesive ring device including a front release liner and a back release liner

located on either side of an adhesive and illustrating an ear of each of the front release liner and the back release liner and a hole formed in each of the front release liner and the back release liner;

FIG. 2 is a front elevation view of the adhesive ring device illustrated in FIG. 1;

FIG. 3 is a back elevation view of the adhesive ring device illustrated in FIG. 1;

FIG. 4 is a left side elevation view of the adhesive ring device illustrated in FIG. 1;

FIG. 5 is a right side elevation view of the adhesive ring device illustrated in FIG. 1;

FIG. 6 is a top plan view of the adhesive ring device illustrated in FIG. 1; and,

FIG. 7 is a bottom plan view of the adhesive ring device illustrated in FIG. 1.

In FIGS. 1 and 4-7 the broken lines illustrate environment of the adhesive between the front release liner and the back release liner and form no part of the claimed design.

In FIGS. 1 and 4-7 the broken lines illustrate environment of a portion of a perimeter of the front release liner and the back release liner on each side of the ear of the front release liner and the ear of the back release liner and form no part of the claimed design. The front release liner and the back release liner are thin, and as such, a thickness of the front release liner and the back release liner is shown as a single line.

In FIG. 2 the broken lines illustrate environment of the portion of the perimeter of the front release liner on each side of the ear of the front release liner.

In FIG. 3 the broken lines illustrate environment the portion of the perimeter of the back release liner on each side of the ear of the back release liner.

In FIGS. 1-3 the heavy dashed line illustrates the boundary of the claimed design.

In this application the ornamental design relates in part to the appearance of a relative size between the hole and a location of the ear on a perimeter portion of the release line.
