(57) **CLAIM**

An ornamental design for a jacket, as shown and described.

DESCRIPTION

FIG. 1 is a front view of a jacket in a first position with arms relaxed according to the present invention.

FIG. 2 is a front view of the jacket of FIG. 1 in a second position with arms bent.

FIG. 3 is a rear view of the jacket of FIG. 1 in a first position including back reflective panels in a closed position.

FIG. 4 is a rear view of the jacket of FIG. 2 in a second position with arms bent. As shown the back reflective panels are in an open position. The back reflective panels are light reflective.

FIG. 5 is a right side view of the jacket of FIG. 1 in a first position and the back reflective panels in a closed position.

FIG. 6 is a right side view of the jacket of FIG. 2 in a second position. The back reflective panels are in an open position.

FIG. 7 is a left side view of the jacket of FIG. 1 in a first position and the back reflective panels in a closed position.

FIG. 8 is a left side view of the jacket of FIG. 2 in a second position. The back reflective panels are in an open position.

FIG. 9 is a top view of the jacket of FIG. 1; and,

FIG. 10 is a bottom view of the jacket of FIG. 1.

As described in the description of the drawings, the back reflective panels of the jacket have closed and open positions. The open position is engaged when the arms of the jacket are bent forward in the second position as shown, for example, in FIGS. 2 and 4. In the open position, the back reflective panels expose a reflective material. In the closed position, the reflective material of the back reflective panels is substantially not visible. Cross-hatching is used to indicate the reflective material of the back reflective panels in the open position in FIGS. 4, 6, and 8. Surface shading lines are further used in FIGS. 1-10. The dashed lines shown in FIGS. 1-10 depict seam lines, stitching and structure portions of the jacket that form no part of the claim.

1 Claim, 10 Drawing Sheets
