### Why Total Cost is Important

#### What will each plan really cost you, for the year?

When picking a health plan, it's easy to focus on just a few numbers - like the premium, the deductible, or the cost of an office visit. But these days, most plans are too complicated to just focus on a few numbers. A better approach is to start with the premium, and then add on an estimate of ALL your projected medical and prescription expenses for the year.

This amount is called the **total cost**.

The tricky part is actually calculating that estimate of all your medical and prescription expenses. Luckily, you have some pretty advanced tools here to do that. (Yes, that's a bit of a brag.)

## How do you ESTIMATE the **TOTAL COST** for a health plan?

Annual Costs for: **PHO Plan**

<p><b>Minimum Total Cost</b> (Premium x 12 Months)</p> <p><b>\$905.64</b></p> <p>An estimate of how much you would pay if you never used any health services - or if you only used services 100% covered by the plan.</p>	<p><b>Your Estimated Total Cost</b></p> <p><b>Estimate My Out-of-Pocket Costs</b></p> <p>Use Ask Smart to calculate a personalized estimate of how much you might spend on out-of-pocket costs next year.</p>	<p><b>In-Network Maximum Total Cost</b> (Annual Premium + Out-of-Pocket Max)</p> <p><b>\$9,905.64</b></p> <p>An estimate of how much you would pay if you incurred a very high amount of medical expenses.</p>
