(57) **CLAIM**

The ornamental design for a display screen with animated graphical user interface, as shown and described.

DESCRIPTION

The patent or application file contains at least one drawing executed in color. Copies of this patent or patent application publication with color drawing(s) will be provided by the Office upon request and payment of the necessary fee.

FIG. **1** is a first image in a sequence for a display screen with animated graphical user interface showing our new design;

FIG. **2** is a second image thereof; and,

FIG. **3** is a third image thereof.

The broken lines showing an electronic device illustrate environmental structure. The remaining broken lines, including all text, numerals, and the two concentric circles appearing in the upper left portion of the display screen, illustrate portions of the graphical user interface. None of the broken lines form part of the claimed design.

The appearance of the animated graphical user interface sequentially transitions between the images shown in FIGS. **1-3**. The process or period in which one image transitions to another forms no part of the claimed design.
