(57) **CLAIM**

The ornamental design for a display screen or portion thereof with animated graphical user interface elements incorporating overlapping circles, as shown and described.

DESCRIPTION

The file of this patent contains at least one drawing executed in color. Copies of this patent with color drawings will be provided by the Office upon request and payment of the necessary fee.

FIG. 1 is a front elevational view of a first state for a first embodiment of a display screen or portion thereof with animated graphical user interface elements incorporating overlapping circles;

FIG. 2 is a front elevational view of a second state for the first embodiment of the display screen or portion thereof with animated graphical user interface elements incorporating overlapping circles;

FIG. 3 is a front elevational view of a third state for the first embodiment of the display screen or portion thereof with animated graphical user interface elements incorporating overlapping circles;

FIG. 4 is a front elevational view of a fourth state for the first embodiment of the display screen or portion thereof with animated graphical user interface elements incorporating overlapping circles;

FIG. 5 is a front elevational view of a fifth state for the first embodiment of the display screen or portion thereof with animated graphical user interface elements incorporating overlapping circles;

(Continued)

FIG. 6 is a front elevational view of a sixth state for the first embodiment of the display screen or portion thereof with animated graphical user interface elements incorporating overlapping circles;

FIG. 7 is a front elevational view of a seventh state for the first embodiment of the display screen or portion thereof with animated graphical user interface elements incorporating overlapping circles;

FIG. 8 is a front elevational view of a first state for a second embodiment of a display screen or portion thereof with animated graphical user interface elements incorporating overlapping circles;

FIG. 9 is a front elevational view of a second state for the second embodiment of the display screen or portion thereof with animated graphical user interface elements incorporating overlapping circles;

FIG. 10 is a front elevational view of a third state for the second embodiment of the display screen or portion thereof with animated graphical user interface elements incorporating overlapping circles;

FIG. 11 is a front elevational view of a fourth state for the second embodiment of the display screen or portion thereof with animated graphical user interface elements incorporating overlapping circles;

FIG. 12 is a front elevational view of a fifth state for the second embodiment of the display screen or portion thereof with animated graphical user interface elements incorporating overlapping circles;

FIG. 13 is a front elevational view of a sixth state for the second embodiment of the display screen or portion thereof with animated graphical user interface elements incorporating overlapping circles; and,

FIG. 14 is a front elevational view of a seventh state for the second embodiment of the display screen or portion thereof with animated graphical user interface elements incorporating overlapping circles.

The broken line portions of the display device and graphical user interface forms no part of the claimed design.

The subject matter in this patent includes a process or period in which an image changes into another image. The appearance of the animated image transitions sequentially between the images shown in FIGS. 1 through 7 and FIGS. 8 through 14.

The process or period in which one image transitions to another forms no part of the claimed design.
