(57) **CLAIM**

The ornamental design for a display screen with graphical user interface for a sphygmomanometer with wireless communication device, as shown and described.

DESCRIPTION

The file of this patent contains a least one drawing/photograph executed in color. Copies of this patent with color drawings/photographs will be provided by the united states Patent and Trademark office upon request and payment of the necessary fee.

FIG. **1** is a front view of a first embodiment of a display screen with graphical user interface for a sphygmomanometer with wireless communication device showing the first image of our new design;

FIG. **2** is a front view showing a second image thereof;

FIG. **3** is a front view showing a third image thereof;

FIG. **4** is a front view showing a fourth image thereof;

FIG. **5** is a front view showing a fifth image thereof; and

FIG. **6** is a front view showing a sixth image thereof.

FIG. **7** is a front view of a second embodiment of a display screen with graphical user interface for a sphygmomanometer with wireless communication device showing the first image of our new design;

FIG. **8** is a front view showing a second image thereof;

FIG. **9** is a front view showing a third image thereof;

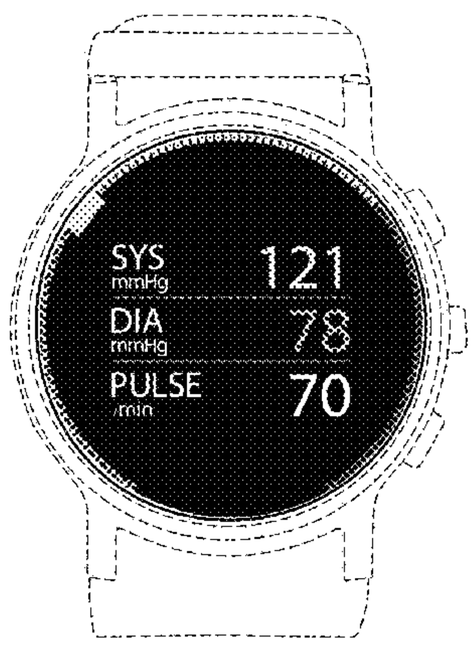
FIG. **10** is a front view showing a fourth image thereof;

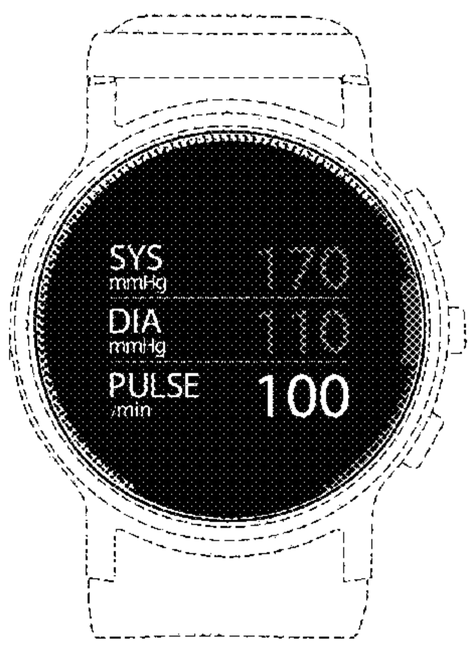
FIG. **11** is a front view showing a fifth image thereof; and,

FIG. **12** is a front view showing a sixth image thereof.

The appearance of the graphical user interface sequentially transitions between the images shown in FIGS. **1-6** and FIGS. **7-12**. The process or period in which one image transitions into another image forms no part of the claimed design.

(Continued)





The dashed broken lines showing a sphygmomanometer with wireless communication device illustrate environmental structure that forms no part of the claimed design.
