(57) **CLAIM**

The ornamental design for a computer display screen with transitional graphical user interface for navigation, as shown and described.

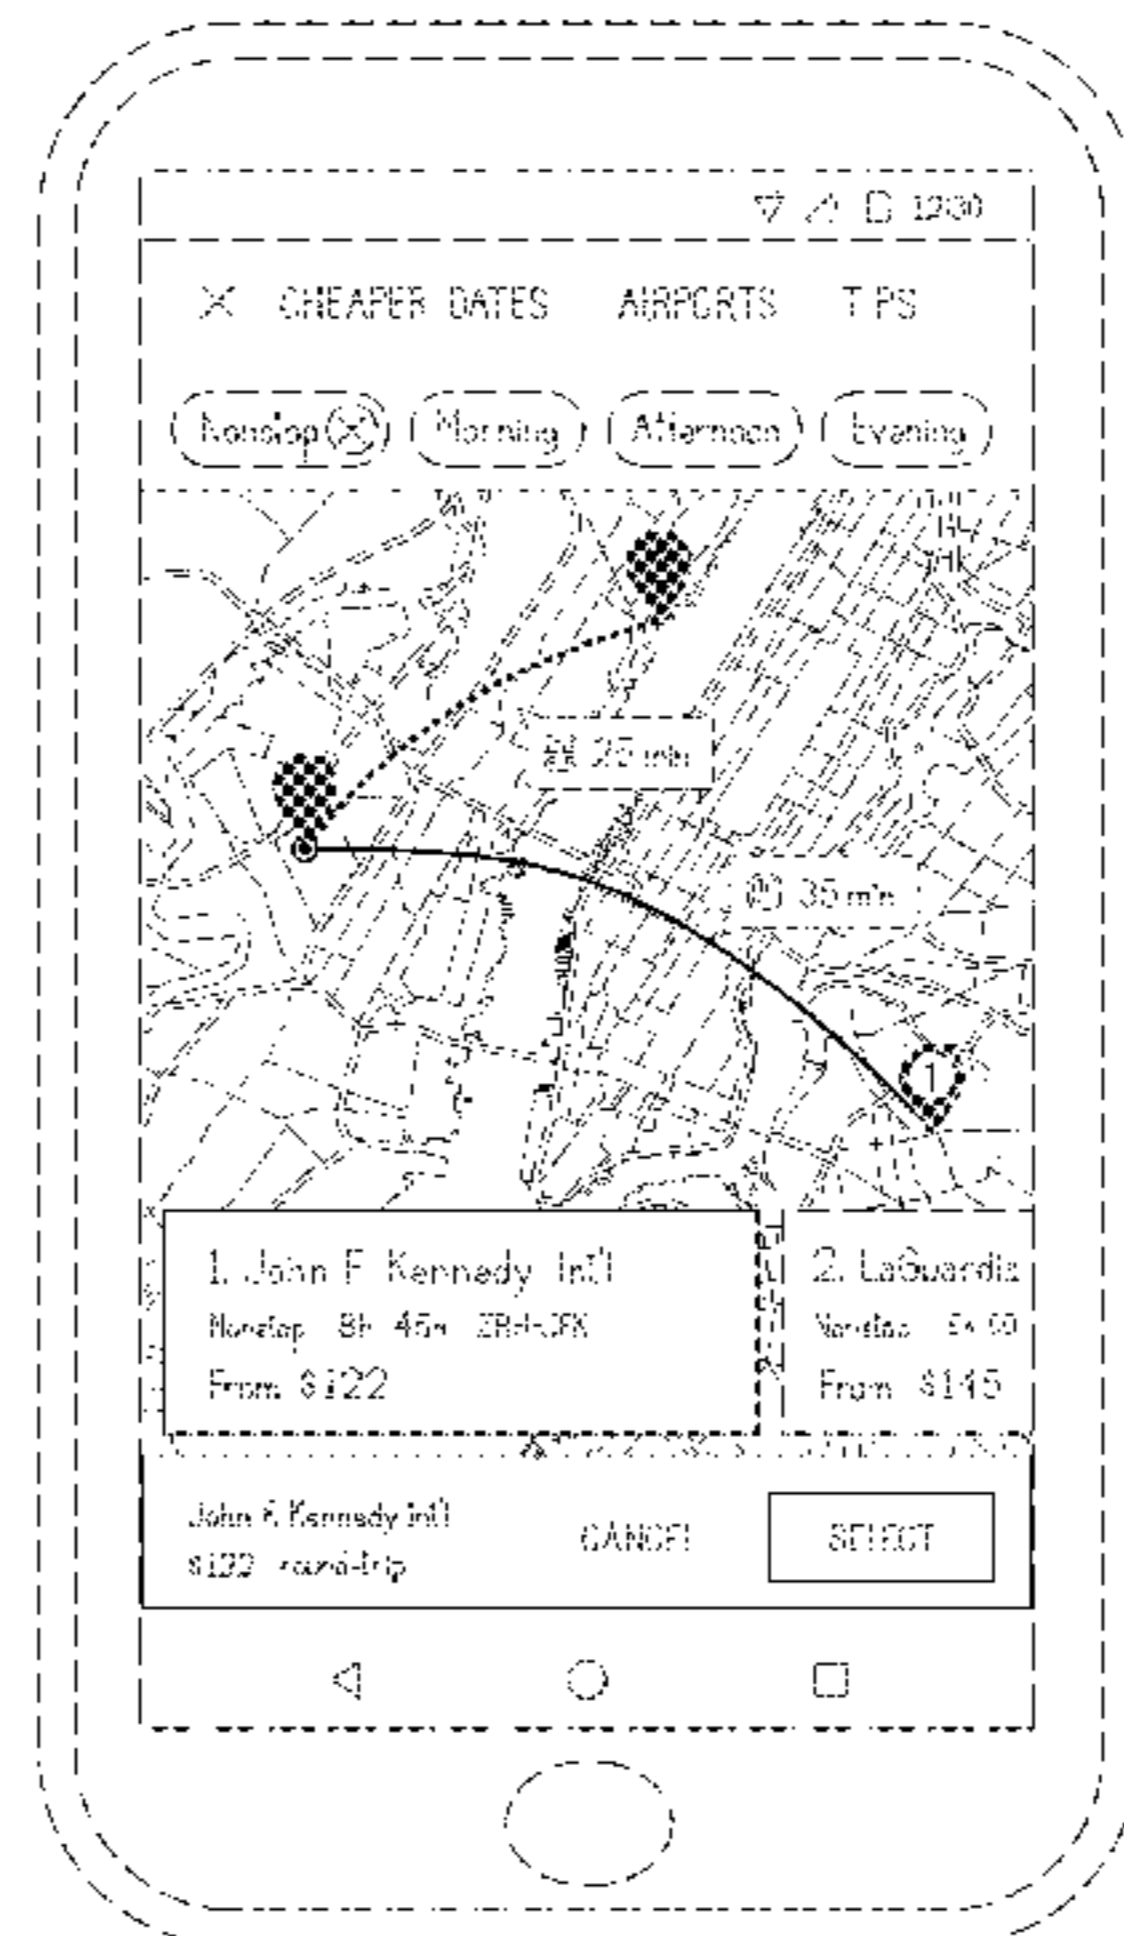

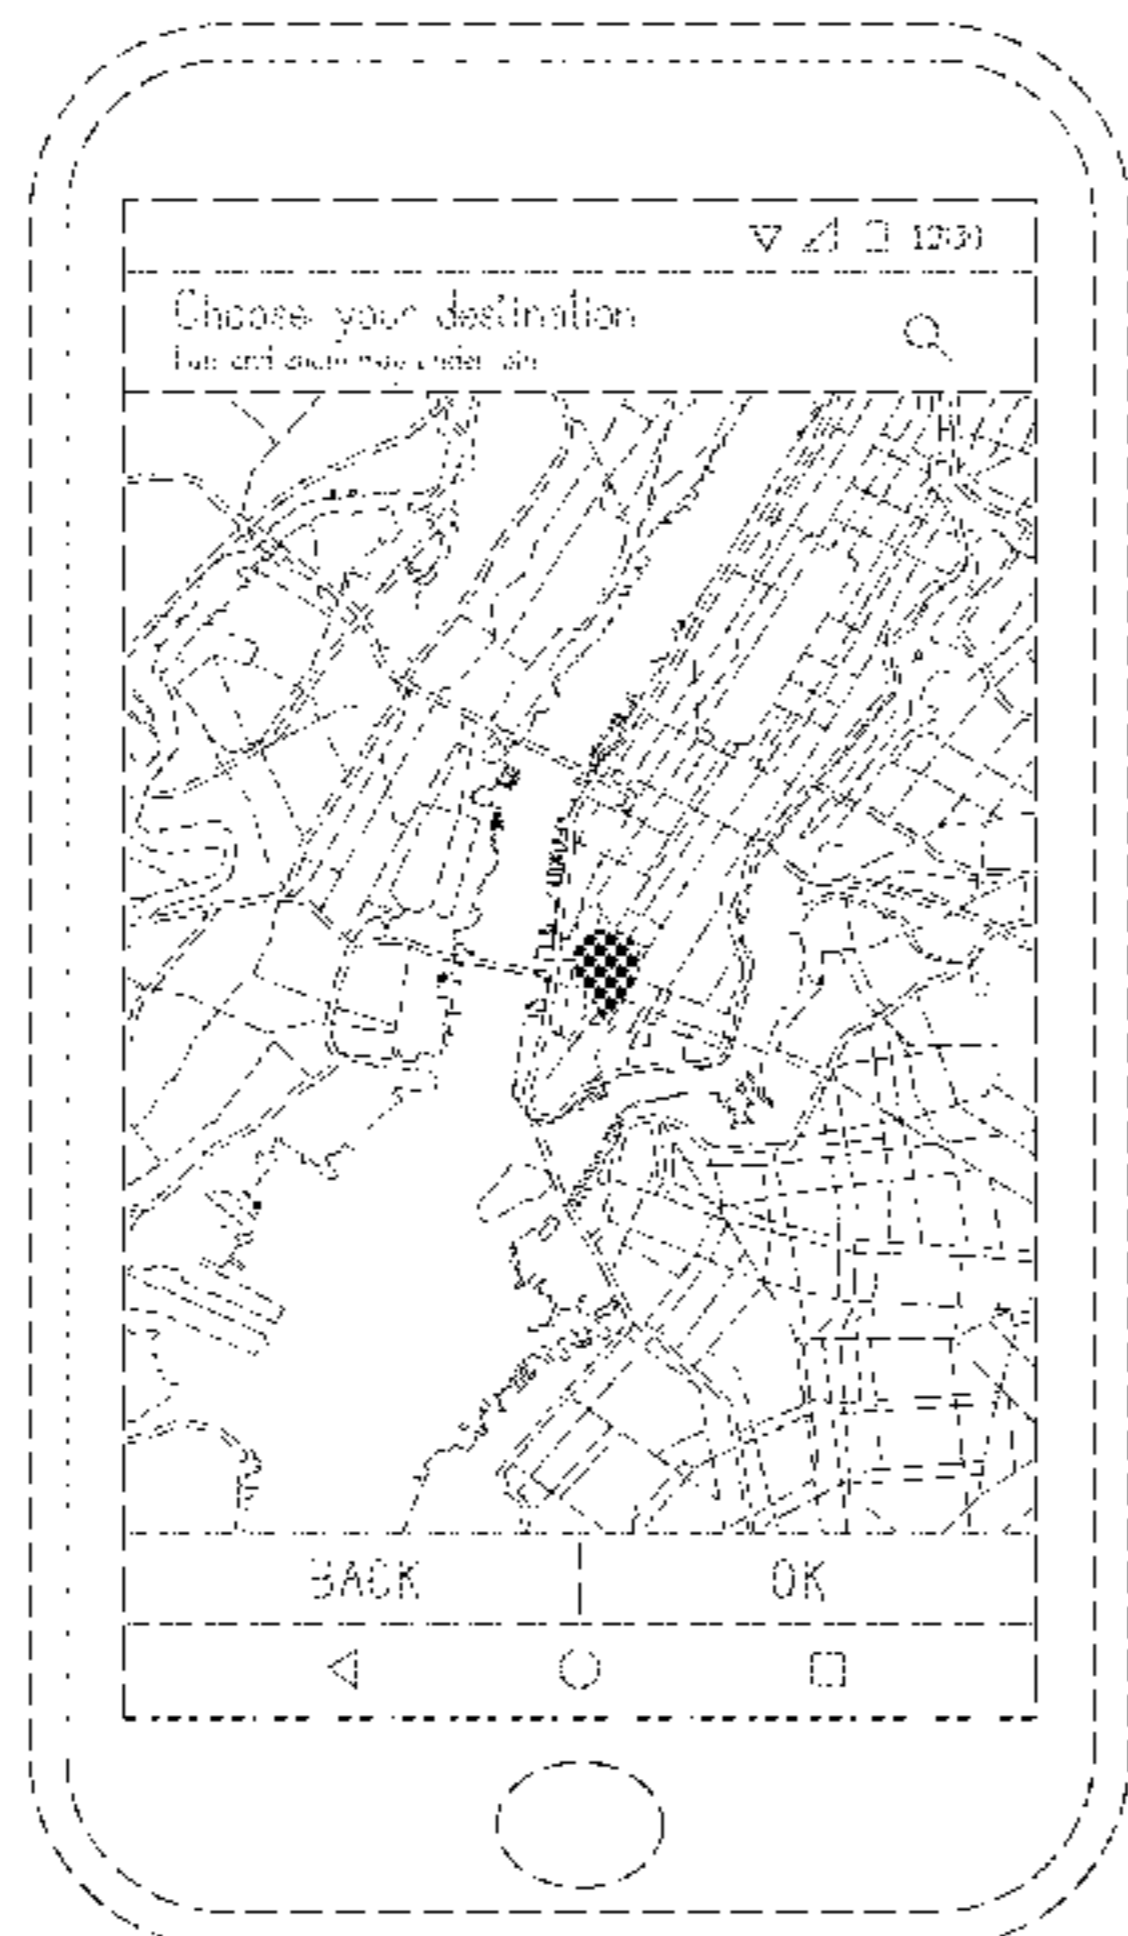

DESCRIPTION

The application file contains at least one drawing executed in color. Copies of this patent or patent application publication with color drawings will be provided by the Office upon request and payment of the necessary fee.

FIG. 1 is a front view of a computer display screen with transitional graphical user interface for navigation showing a first image in a sequence according to our design; and, FIG. 2 is a front view of the computer display screen with transitional graphical user interface for navigation showing a second image in the sequence according to our design. The appearance of the transitional image sequentially transitions from FIG. 1 to FIG. 2 in a first embodiment, and from FIG. 2 to FIG. 1 in a second embodiment. The process or period in which an image transitions to another forms no part of the claimed design.

The heavy-weight dotted segment connecting the solid red and solid green pin icons is included in the claimed design. The longer-incremented broken-line rectangle illustrates a computer display screen and forms no part of the claimed design. The shorter-incremented broken lines outside the rectangle illustrate an electronic device and form no part of the claimed design. The shorter-incremented broken lines within the rectangle illustrate portions of a graphical user interface and form no part of the claimed design.
