(57) **CLAIM**
The ornamental design for a sensor array, substantially as shown and described.

DESCRIPTION
FIG. 1 is a front perspective view of a sensor array, in accordance with an embodiment of the present design; FIG. 2 is a front elevational view of the embodiment shown in FIG. 1; FIG. 3 is a rear elevational view of the embodiment shown in FIG. 1; and, FIG. 4 is a left side elevational view of the embodiment shown in FIG. 1.
A right side elevational view is not shown because it is symmetric to the left side elevational view.
The broken line showing the exemplary jacket to which the sensor array is attached in strategic locations is for illustrative purposes only and forms no part of the claimed design. A top view is not shown because FIGS. 1 and 2 depict a top perspective view and the claimed features have no significant depth requiring a top, in-plane view.
Likewise, a bottom view is not shown because the claimed features have no significant depth requiring a bottom, in-plane view.
The alternating thick-thin parallel lines depicting the generally parallel sensor stitching lines are for illustrative purposes to avoid USPTO considering realistic stitching as not being claimed because they may inherently appear to be dashed lines. As such, the alternating thick-thin parallel lines shown should be construed to appear like any common surface stitching would look into a clothing material.
