(57) **CLAIM**

The ornamental design for a candle wrap with transparency gradient, as shown and described.

DESCRIPTION

FIG. **1** is a perspective view of a first embodiment of a candle wrap with a transparency gradient.

FIG. **2** is a front view of a first embodiment of a candle wrap with a transparency gradient, which is visually the same as the back view of the same embodiment.

FIG. **3** is a right side view of a first embodiment of a candle wrap with a transparency gradient, which is visually the same as the left side view of the same embodiment.

FIG. **4** is a top view of a first embodiment of a candle wrap with a transparency gradient, which is visually the same as the bottom view of the same embodiment.

FIG. **5** is a perspective view of a second embodiment of a candle wrap with a transparency gradient.

FIG. **6** is a front view of a second embodiment of a candle wrap with a transparency gradient, which is visually the same as the back view of the same embodiment.

FIG. **7** is a right side view of a second embodiment of a candle wrap with a transparency gradient, which is visually the same as the left side view of the same embodiment.

FIG. **8** is a top view of a second embodiment of a candle wrap with a transparency gradient, which is visually the same as the bottom view of the same embodiment.

FIG. **9** is a perspective view of a third embodiment of a candle wrap with a transparency gradient.

FIG. **10** is a front view of a third embodiment of a candle wrap with a transparency gradient, which is visually the same as the back view of the same embodiment.

FIG. **11** is a right side view of a third embodiment of a candle wrap with a transparency gradient, which is visually the same as the left side view of the same embodiment.

FIG. **12** is a top view of a third embodiment of a candle wrap with a transparency gradient, which is visually the same as the bottom view of the same embodiment.

FIG. **13** is a perspective view of a fourth embodiment of a candle wrap with a transparency gradient.

FIG. **14** is a front view of a fourth embodiment of a candle wrap with a transparency gradient, which is visually the same as the back view of the same embodiment.

FIG. **15** is a right side view of a fourth embodiment of a candle wrap with a transparency gradient, which is visually the same as the left side view of the same embodiment.

FIG. **16** is a top view of a fourth embodiment of a candle wrap with a transparency gradient, which is visually the same as the bottom view of the same embodiment.

FIG. **17** is a perspective view of a fifth embodiment of a candle wrap with a transparency gradient.

(Continued)

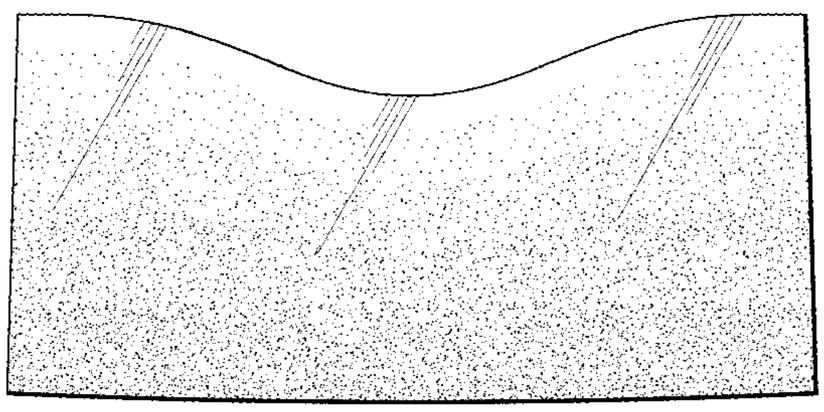

FIG. **18** is a front view of a fifth embodiment of a candle wrap with a transparency gradient, which is visually the same as the back view of the same embodiment.

FIG. **19** is a right side view of a fifth embodiment of a candle wrap with a transparency gradient, which is visually the same as the left side view of the same embodiment; and,

FIG. **20** is a top view of a fifth embodiment of a candle wrap with a transparency gradient, which is visually the same as the bottom view of the same embodiment.

The dominant feature of my design resides in the transparency gradient of a candle wrap. In addition, the bottom edge of the wrap has a slight radius, as seen in FIGS. **2**, **6**, **10**, **14**, and **18**. Moreover, FIGS. **1-20** all conform to a first shape. Each of the embodiments has a different opacity gradient, where each individual embodiment transitions from fully transparent at the top, to fully opaque some distance down from the top.
