FIG. 7 is a front side perspective view thereof.

See application file for complete search history.

The rear combination lamp is configured to be mounted to
an automobile. The mounting structure and support structure
of the rear combination lamp, shown in broken lines in
FIGS. 1 to 7, form no part of the claimed design since the
mounting structure and support structure are hidden when
the rear combination lamp is mounted to the automobile.

In addition, the appearance of the rear side structures of the
rear combination lamp as shown in broken lines in FIGS. 2
to 6 is for purpose of illustrating the boundaries of the
exterior surface of the rear combination lamp, and forms no
part of the claimed design. The rear combination lamp has
a front lens that is transparent such that features behind the
lens are at least partially visible as illustrated.

A second embodiment of our new design is identical to the
first embodiment except that it is a mirror image. The second
embodiment of our new design includes the mirror image of
the rear combination lamp for an automobile as shown in
FIGS. 1 to 7.
