(57) **CLAIM**

I claim the ornamental design for a laminated roof shingle,  
as shown and described.

**DESCRIPTION**

FIG. 1 is a perspective view of a laminated roof shingle  
showing my new design according to a first embodiment.  
FIG. 2 is a top plan view of the laminated roof shingle  
showing my new design according to a first embodiment.

FIG. 3 is a perspective view of a laminated roof shingle  
showing my new design according to a second embodiment.  
FIG. 4 is a top plan view of the laminated roof shingle  
showing my new design according to a second embodiment.  
FIG. 5 is a perspective view of a laminated roof shingle  
showing my new design according to a third embodiment.  
FIG. 6 is a top plan view of the laminated roof shingle  
showing my new design according to a third embodiment.  
FIG. 7 is a perspective view of a laminated roof shingle  
showing my new design according to a fourth embodiment.  
FIG. 8 is a top plan view of the laminated roof shingle  
showing my new design according to a fourth embodiment.  
FIG. 9 is a perspective view of a laminated roof shingle  
showing my new design according to a fifth embodiment.  
FIG. 10 is a top plan view of the laminated roof shingle  
showing my new design according to a fifth embodiment.  
FIG. 11 is a perspective view of a laminated roof shingle  
showing my new design according to a sixth embodiment.  
FIG. 12 is a top plan view of the laminated roof shingle  
showing my new design according to a sixth embodiment.  
FIG. 13 is a perspective view of a laminated roof shingle  
showing my new design according to a seventh embodi-  
ment; and,

FIG. 14 is a top plan view of the laminated roof shingle  
showing my new design according to a seventh embodi-  
ment.

The bottom and the four sides of the laminated roof shingle,  
shown in broken lines, are unornamented and form no part  
of the claimed design. The laminated roof shingle is of  
conventional thickness, exaggerated in the perspective  
views for ease of illustration.

The hatched areas in the figures indicate granular surfaces of  
contrasting appearance. My ornamental design is formed  
with a first granular surface that contrasts with a second  
adjacent granular surface on the same level and a third  
adjacent granular surface that is recessed. Each of the three  
granular surfaces are visually distinct from one another.

The remaining broken lines in the figures show a portion of  
the laminated roof shingle that is covered and not visible  
when the laminated roof shingle is used normally as part of  
a roof covering and forms no part of the claimed design.
