(57) **CLAIM**

The ornamental designs for a tool for soft tissue mobilization, as shown and described.

DESCRIPTION

FIG. 1 is a perspective view of a tool for soft tissue mobilization. The tool includes a middle segment with a

generally convex portion and a generally concave portion opposite the convex portion, a first leg extending rightward from the middle segment, and a second leg extending leftward from the middle segment. A front surface of the tool has a plurality of depressions extending at an elevation that is different from the remainder of the front surface.

FIG. 2 is a front elevation view of the tool for soft tissue mobilization shown in FIG. 1.

FIG. 3 is a rear elevation view of the tool for soft tissue mobilization shown in FIG. 1. The rear elevation view is a mirror image of the front elevation view.

FIG. 4 is a right elevation view of the tool for soft tissue mobilization shown in FIG. 1.

FIG. 5 is a left elevation view of the tool for soft tissue mobilization shown in FIG. 1. The left elevation view is a mirror image of the right elevation view.

FIG. 6 is a top plan view of the tool for soft tissue mobilization shown in FIG. 1.

FIG. 7 is a bottom plan view of the tool for soft tissue mobilization shown in FIG. 1.

FIG. 8 is a perspective view of another tool for soft tissue mobilization. The tool includes a middle segment with a generally convex portion and a generally concave portion opposite the convex portion, a first leg extending rightward from the middle segment, and a second leg extending leftward from the middle segment. A front surface of the tool has one or more depressions extending at an elevation that is different from the remainder of the front surface.

FIG. 9 is a front elevation view of the tool for soft tissue mobilization shown in FIG. 8.

FIG. 10 is a rear elevation view of the tool for soft tissue mobilization shown in FIG. 8.

FIG. 11 is a right elevation view of the tool for soft tissue mobilization shown in FIG. 8.

FIG. 12 is a left elevation view of the tool for soft tissue mobilization shown in FIG. 8. The left elevation view is a mirror image of the right elevation view.

FIG. 13 is a top plan view of the tool for soft tissue mobilization shown in FIG. 8; and,

FIG. 14 is a bottom plan view of the tool for soft tissue mobilization shown in FIG. 8.

The drawings are provided with surface shading that shows the character and/or contour of all surfaces of any three-dimensional aspects of the design. Moreover, the broken

(Continued)

lines present in the drawings are included for the purpose of illustrating portions of the article that form no part of the claimed design.
