(57) **CLAIM**

The ornamental design for a display screen with graphical user interface for an imaging protocol manager, as shown and described.

DESCRIPTION

FIG. 1 is a front view of a display screen with graphical user interface for an imaging protocol manager showing a first image in a sequence of the graphical user interface according to the present invention; and,
FIG. 2 is a front view of the display screen with graphical user interface for an imaging protocol manager of FIG. 1 showing a second image in a sequence of the graphical user interface.

In FIGS. 1 and 2, the grey shaded letters and numbers indicate bolded appearance. The contrast in appearance between the bolded and un-bolded is claimed. No specific color is claimed.

The appearance of the graphical user interface transitions sequentially between the images shown. The process or period in which one image transitions to another forms no part of the claimed design.

The outermost broken line showing of a display screen and the other broken line showing of elements of the graphical user interface illustrate portions of the article and do not form part of the claimed design. The broken lines in FIGS. 1-2 depicting text/words, numbers, symbols, and other shapes in the graphical user interface currently form no part of the claimed design.
