(57) **CLAIM**

The ornamental design for a mounting cradle with remote control device for motion furniture, as shown and described.

DESCRIPTION

FIG. 1 is a front perspective view of a mounting cradle with remote control device for motion furniture according to a first embodiment of our design;

FIG. 2 is a front planar view thereof;

FIG. 3 is a bottom view thereof;

FIG. 4 is a rear view thereof;

FIG. 5 is a top view thereof;

FIG. 6 is a right side view thereof;

FIG. 7 is a left side view thereof;

FIG. 8 is a front perspective view of a mounting cradle with remote control device for motion furniture according to a second embodiment of our design;

FIG. 9 is a front planar view thereof;

FIG. 10 is a bottom view thereof;

FIG. 11 is a rear view thereof;

FIG. 12 is a top view thereof;

FIG. 13 is a right side view thereof;

FIG. 14 is a left side view thereof;

FIG. 15 is a front perspective view of a mounting cradle with remote control device for motion furniture according to a third embodiment of our design;

FIG. 16 is a front planar view thereof;

FIG. 17 is a bottom view thereof;

FIG. 18 is a rear view thereof;

FIG. 19 is a top view thereof;

FIG. 20 is a right side view thereof;

FIG. 21 is a left side view thereof;

FIG. 22 is a front perspective view of a mounting cradle with remote control device for motion furniture according to a fourth embodiment of our design;

FIG. 23 is a front planar view thereof;

FIG. 24 is a bottom view thereof;

FIG. 25 is a rear view thereof;

(Continued)

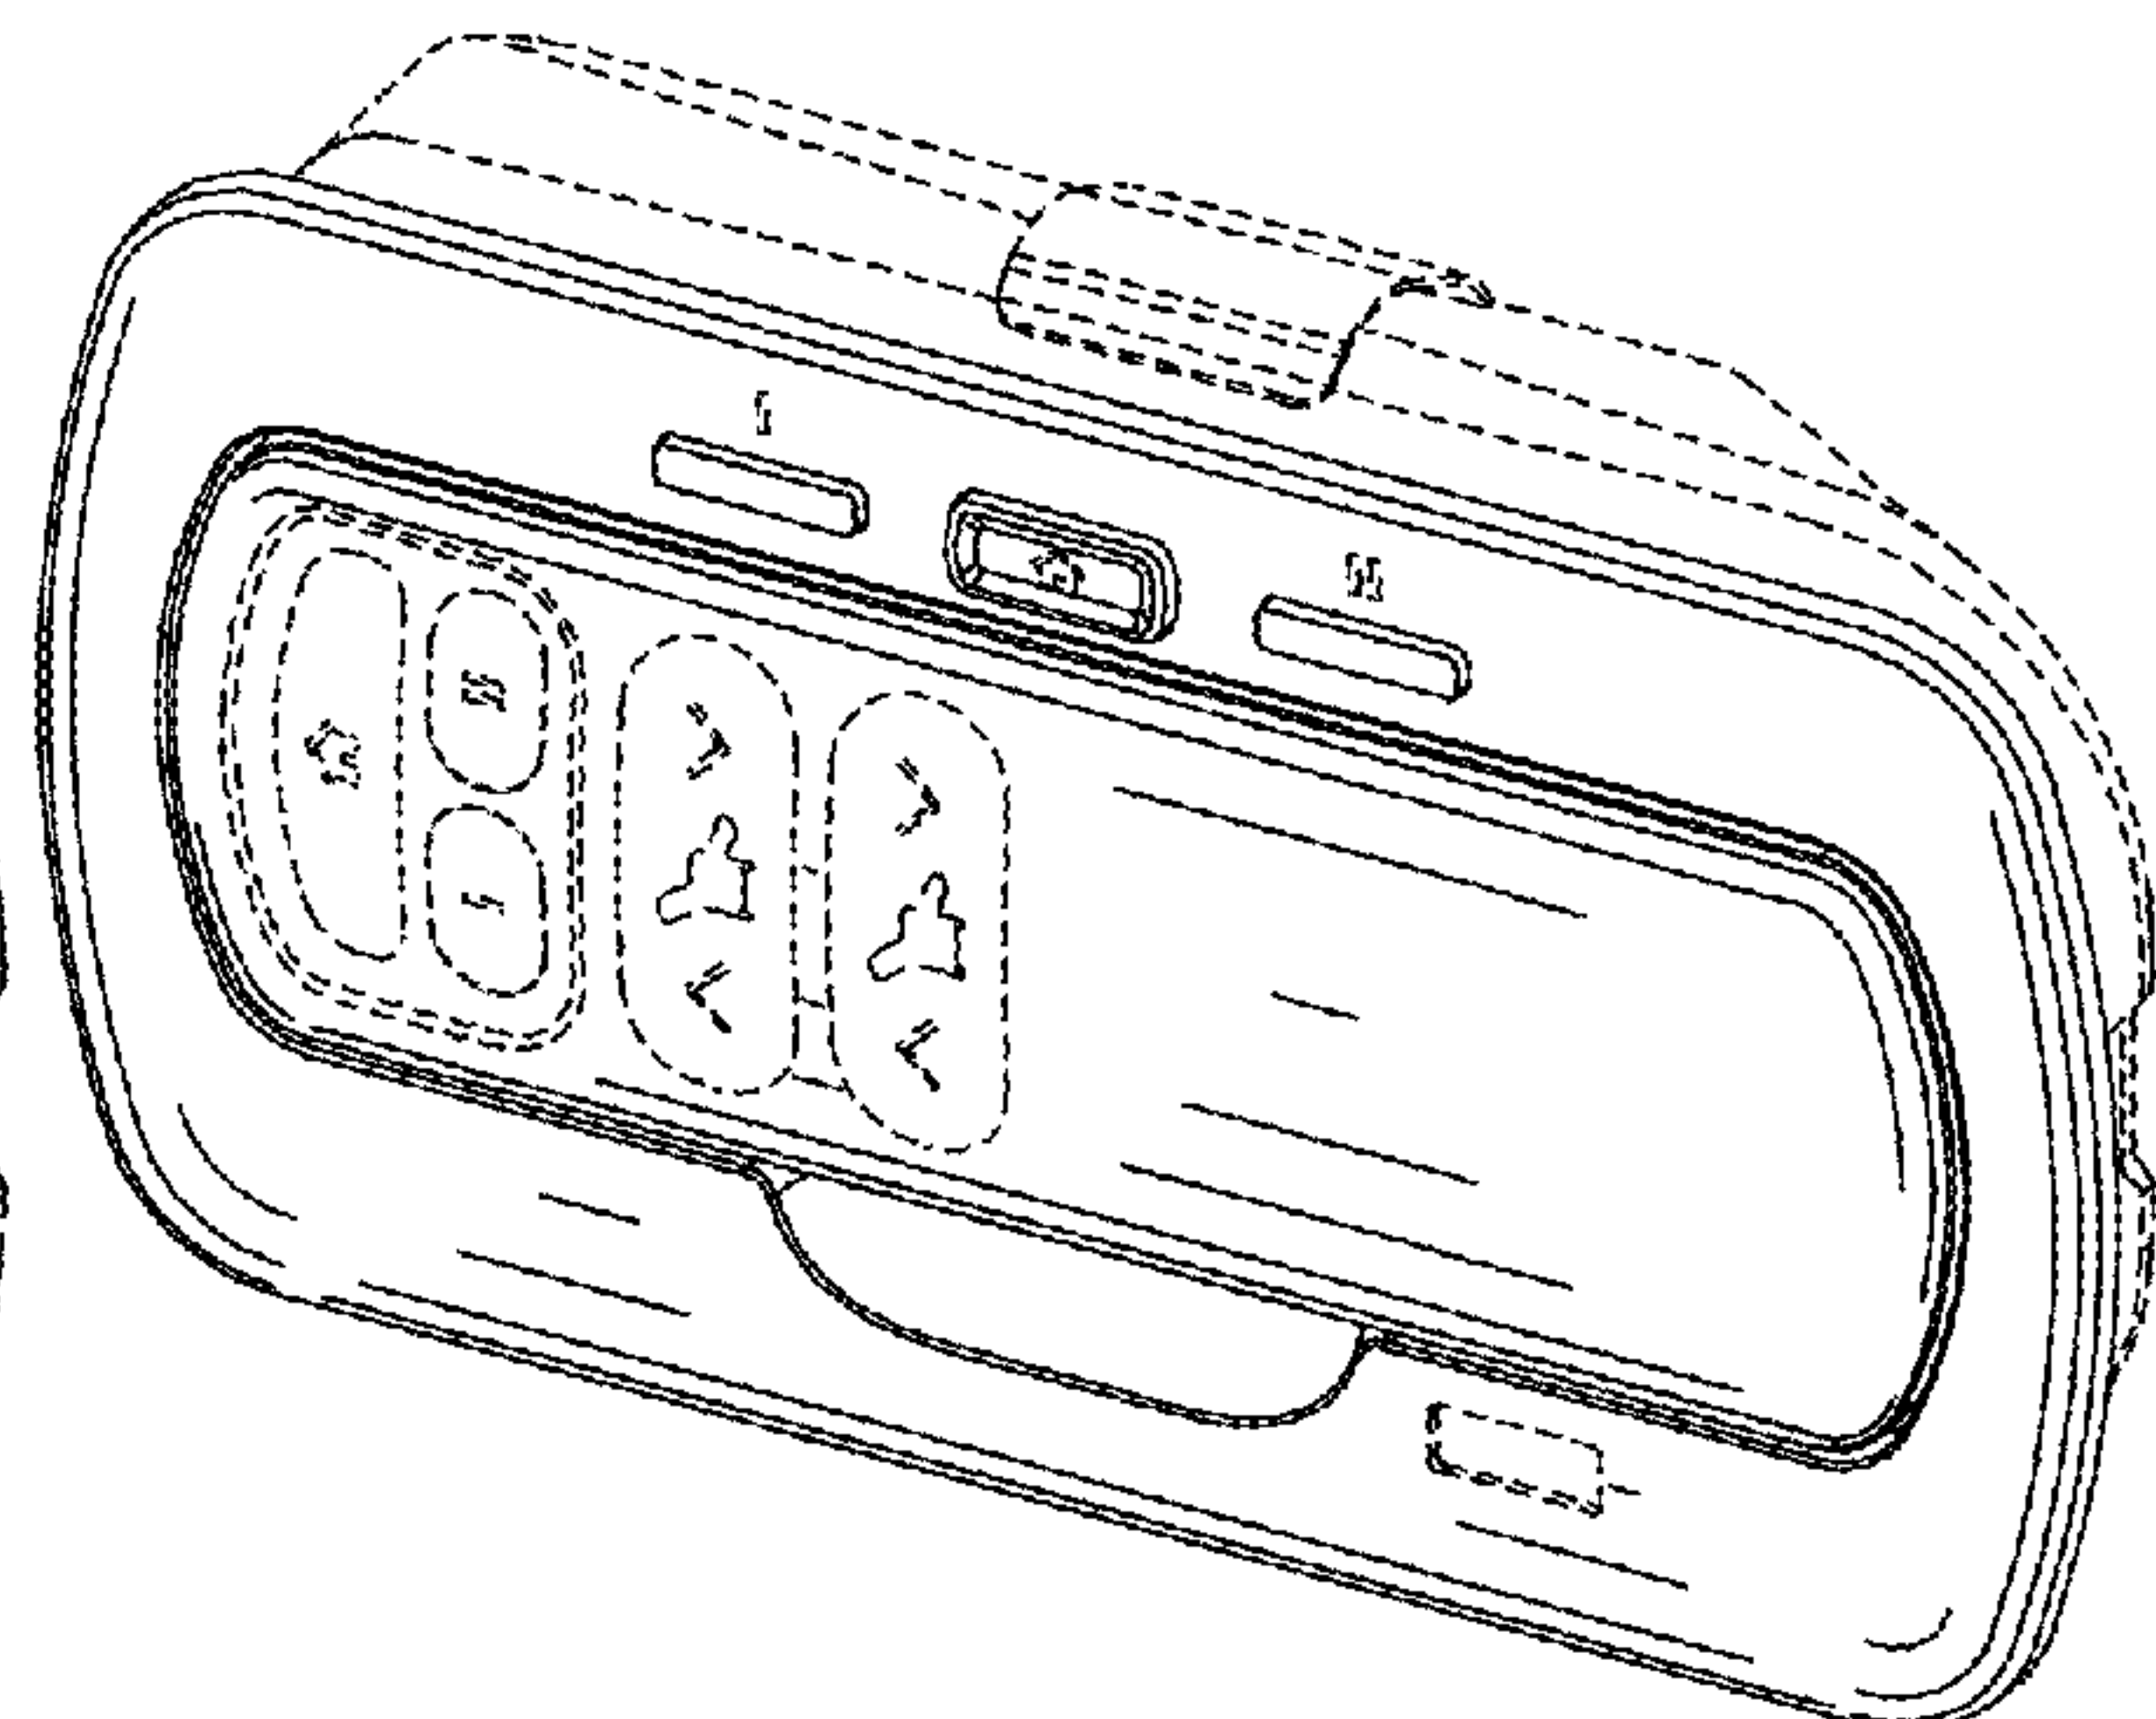

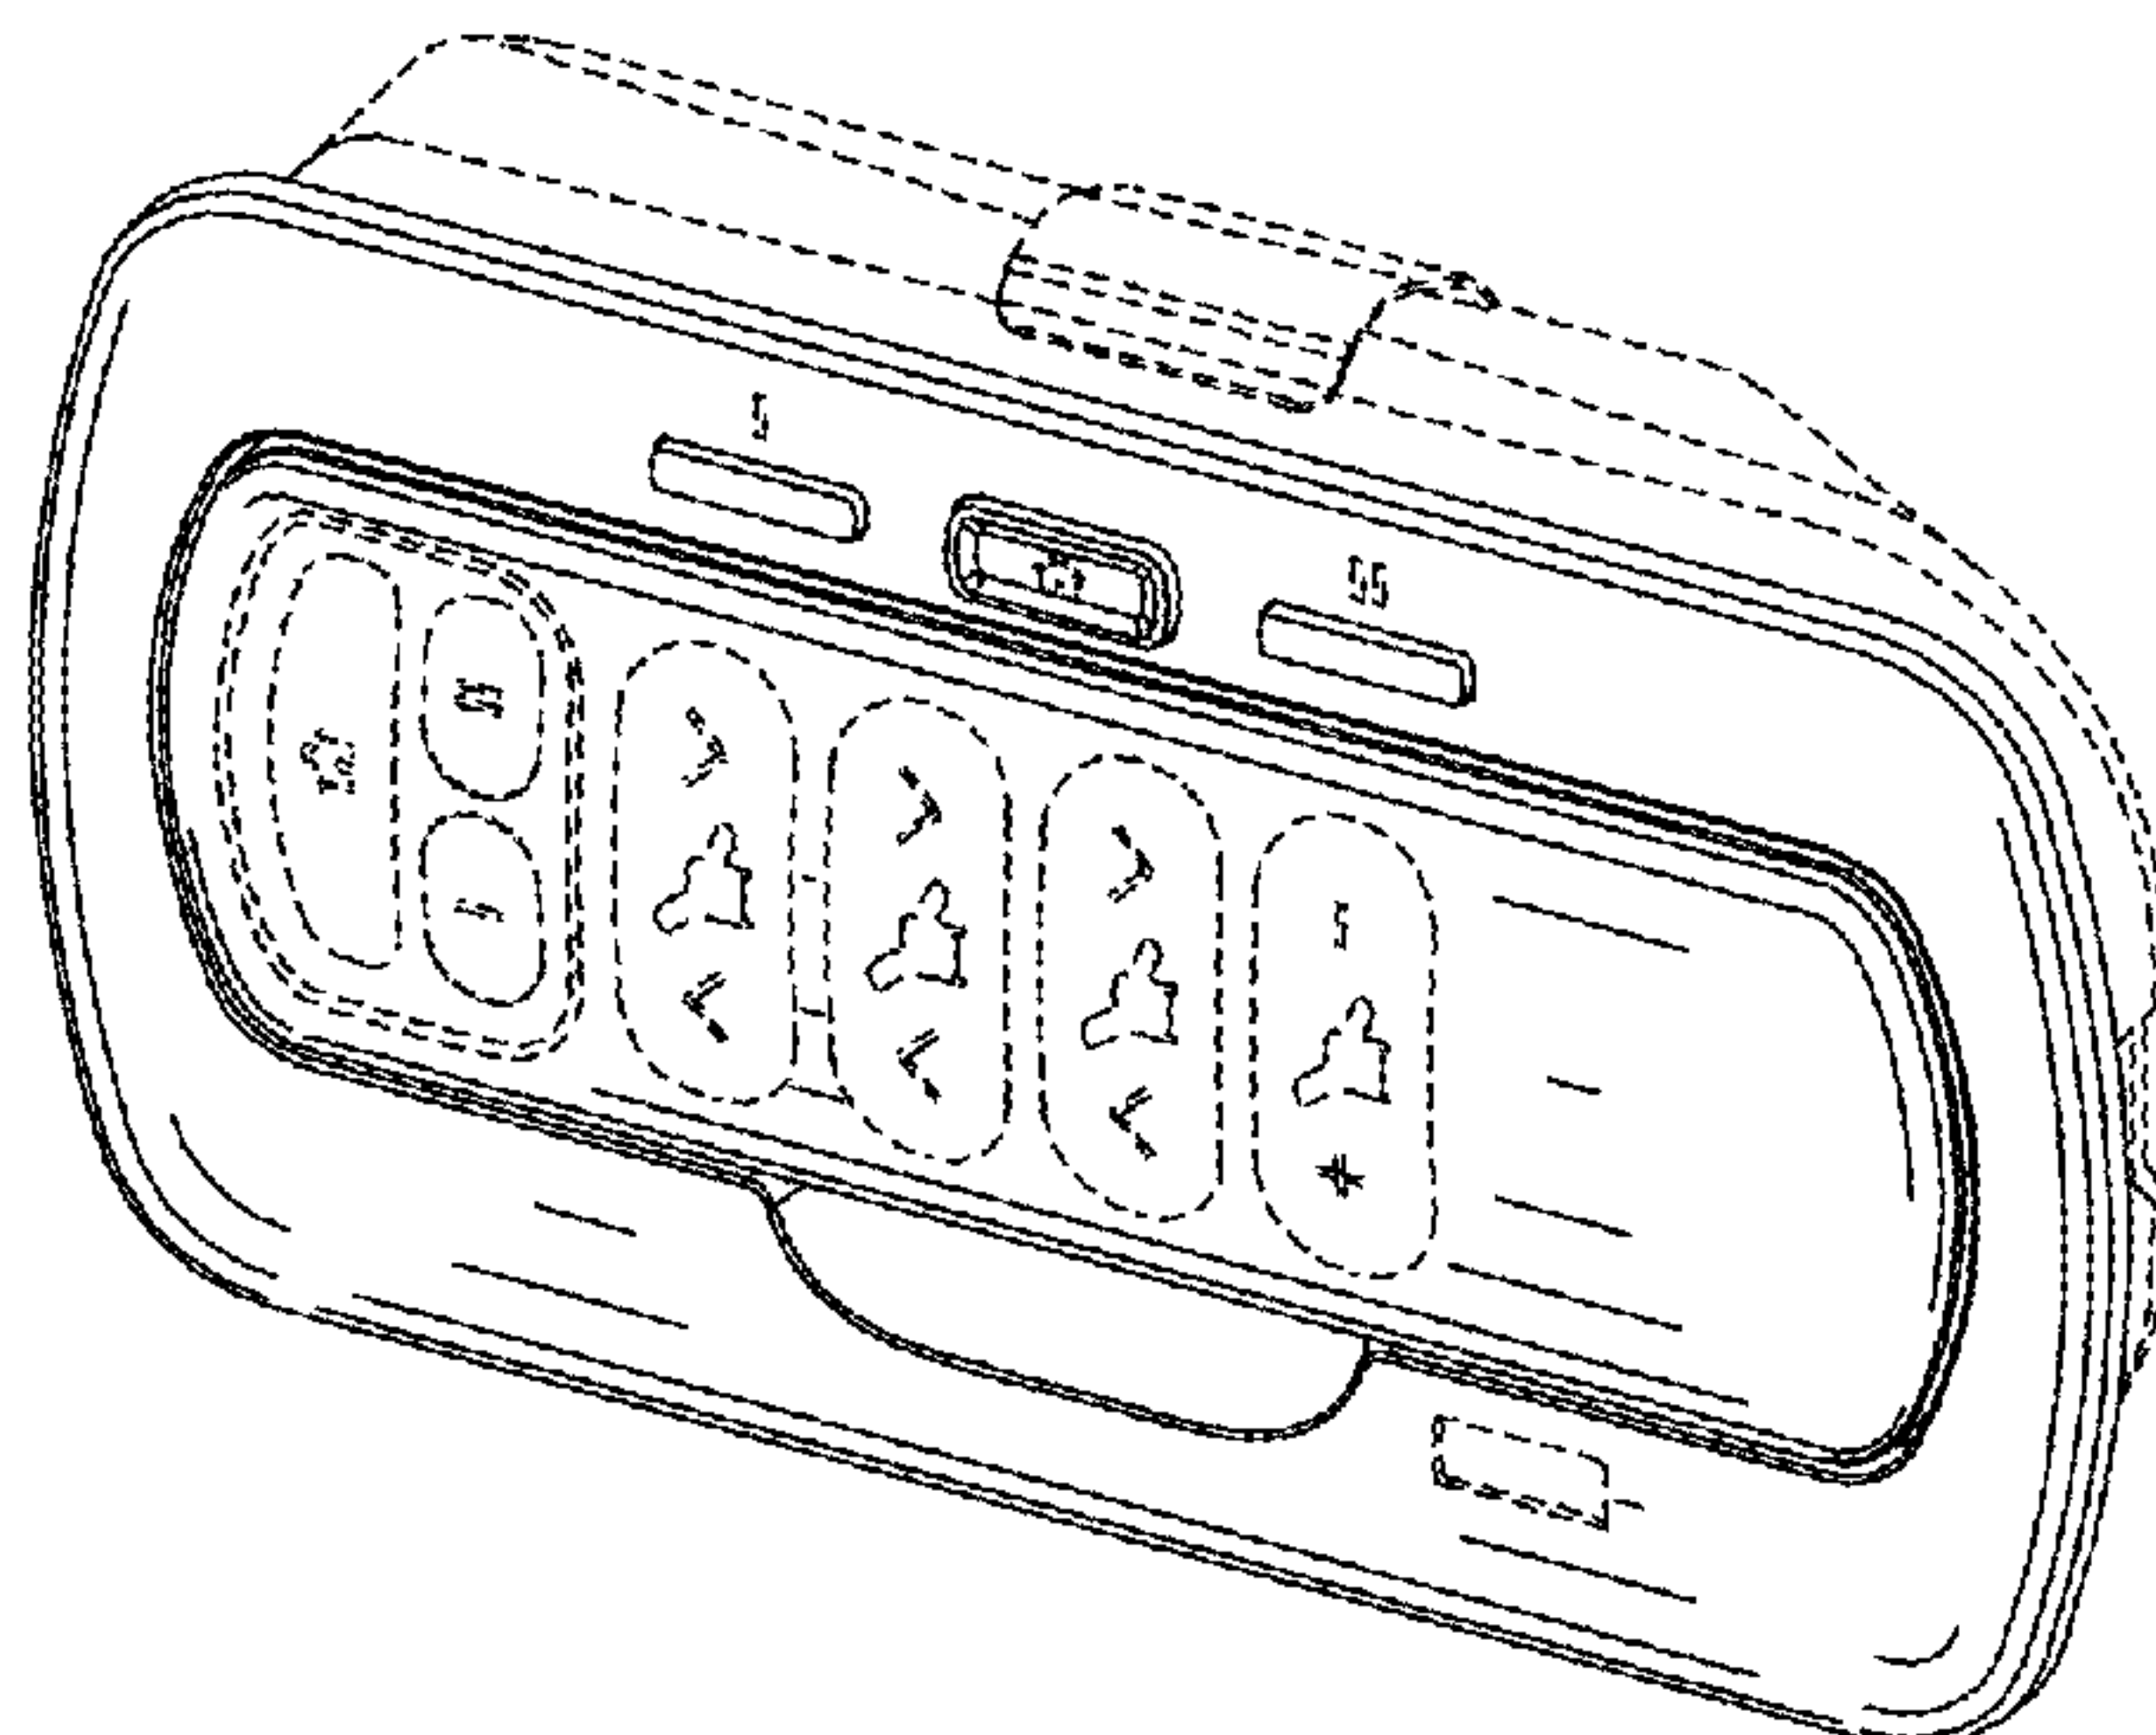

FIG. 26 is a top view thereof;
 FIG. 27 is a right side view thereof;
 FIG. 28 is a left side view thereof;
 FIG. 29 is a perspective view of the first embodiment of the mounting cradle with remote control device for motion furniture with the remote control device received in the mounting cradle at an orientation that is rotated 180 degrees relative to the position of the remote control device in FIGS. 1 and 2;
 FIG. 30 is a front view of the first embodiment of the mounting cradle with remote control device for motion furniture with the remote control device oriented as shown in FIG. 29;
 FIG. 31 is a bottom view of the first embodiment of the mounting cradle with remote control device for motion furniture with the remote control device oriented as shown in FIG. 29;
 FIG. 32 is a rear view of the first embodiment of the mounting cradle with remote control device for motion furniture with the remote control device oriented as shown in FIG. 29;
 FIG. 33 is a top view of the first embodiment of the mounting cradle with remote control device for motion furniture with the remote control device oriented as shown in FIG. 29;
 FIG. 34 is a right side view of the first embodiment of the mounting cradle with remote control device for motion furniture with the remote control device oriented as shown in FIG. 29; and,
 FIG. 35 is a left side view of the first embodiment of the mounting cradle with the remote control device for motion furniture with the remote control device oriented as shown in FIG. 29.

The remote control device of any of the second, third, and fourth embodiments could also be oriented with respect to the mounting cradle in the same manner as the remote control device of FIGS. 29-35.

The broken lines show features of the mounting cradle with remote control device for motion furniture that form no part of the claimed designs of FIGS. 1-35.
