(57) **CLAIM**

The ornamental design for a transcutaneous neuromodulation device, substantially as shown and described.

DESCRIPTION

FIG. 1 is a perspective view of a transcutaneous neuromodulation device according to our new design, where the device generally includes a headband component for engaging a wearer's head and connecting to two interface components generally aligned with the wearer's mastoid region.

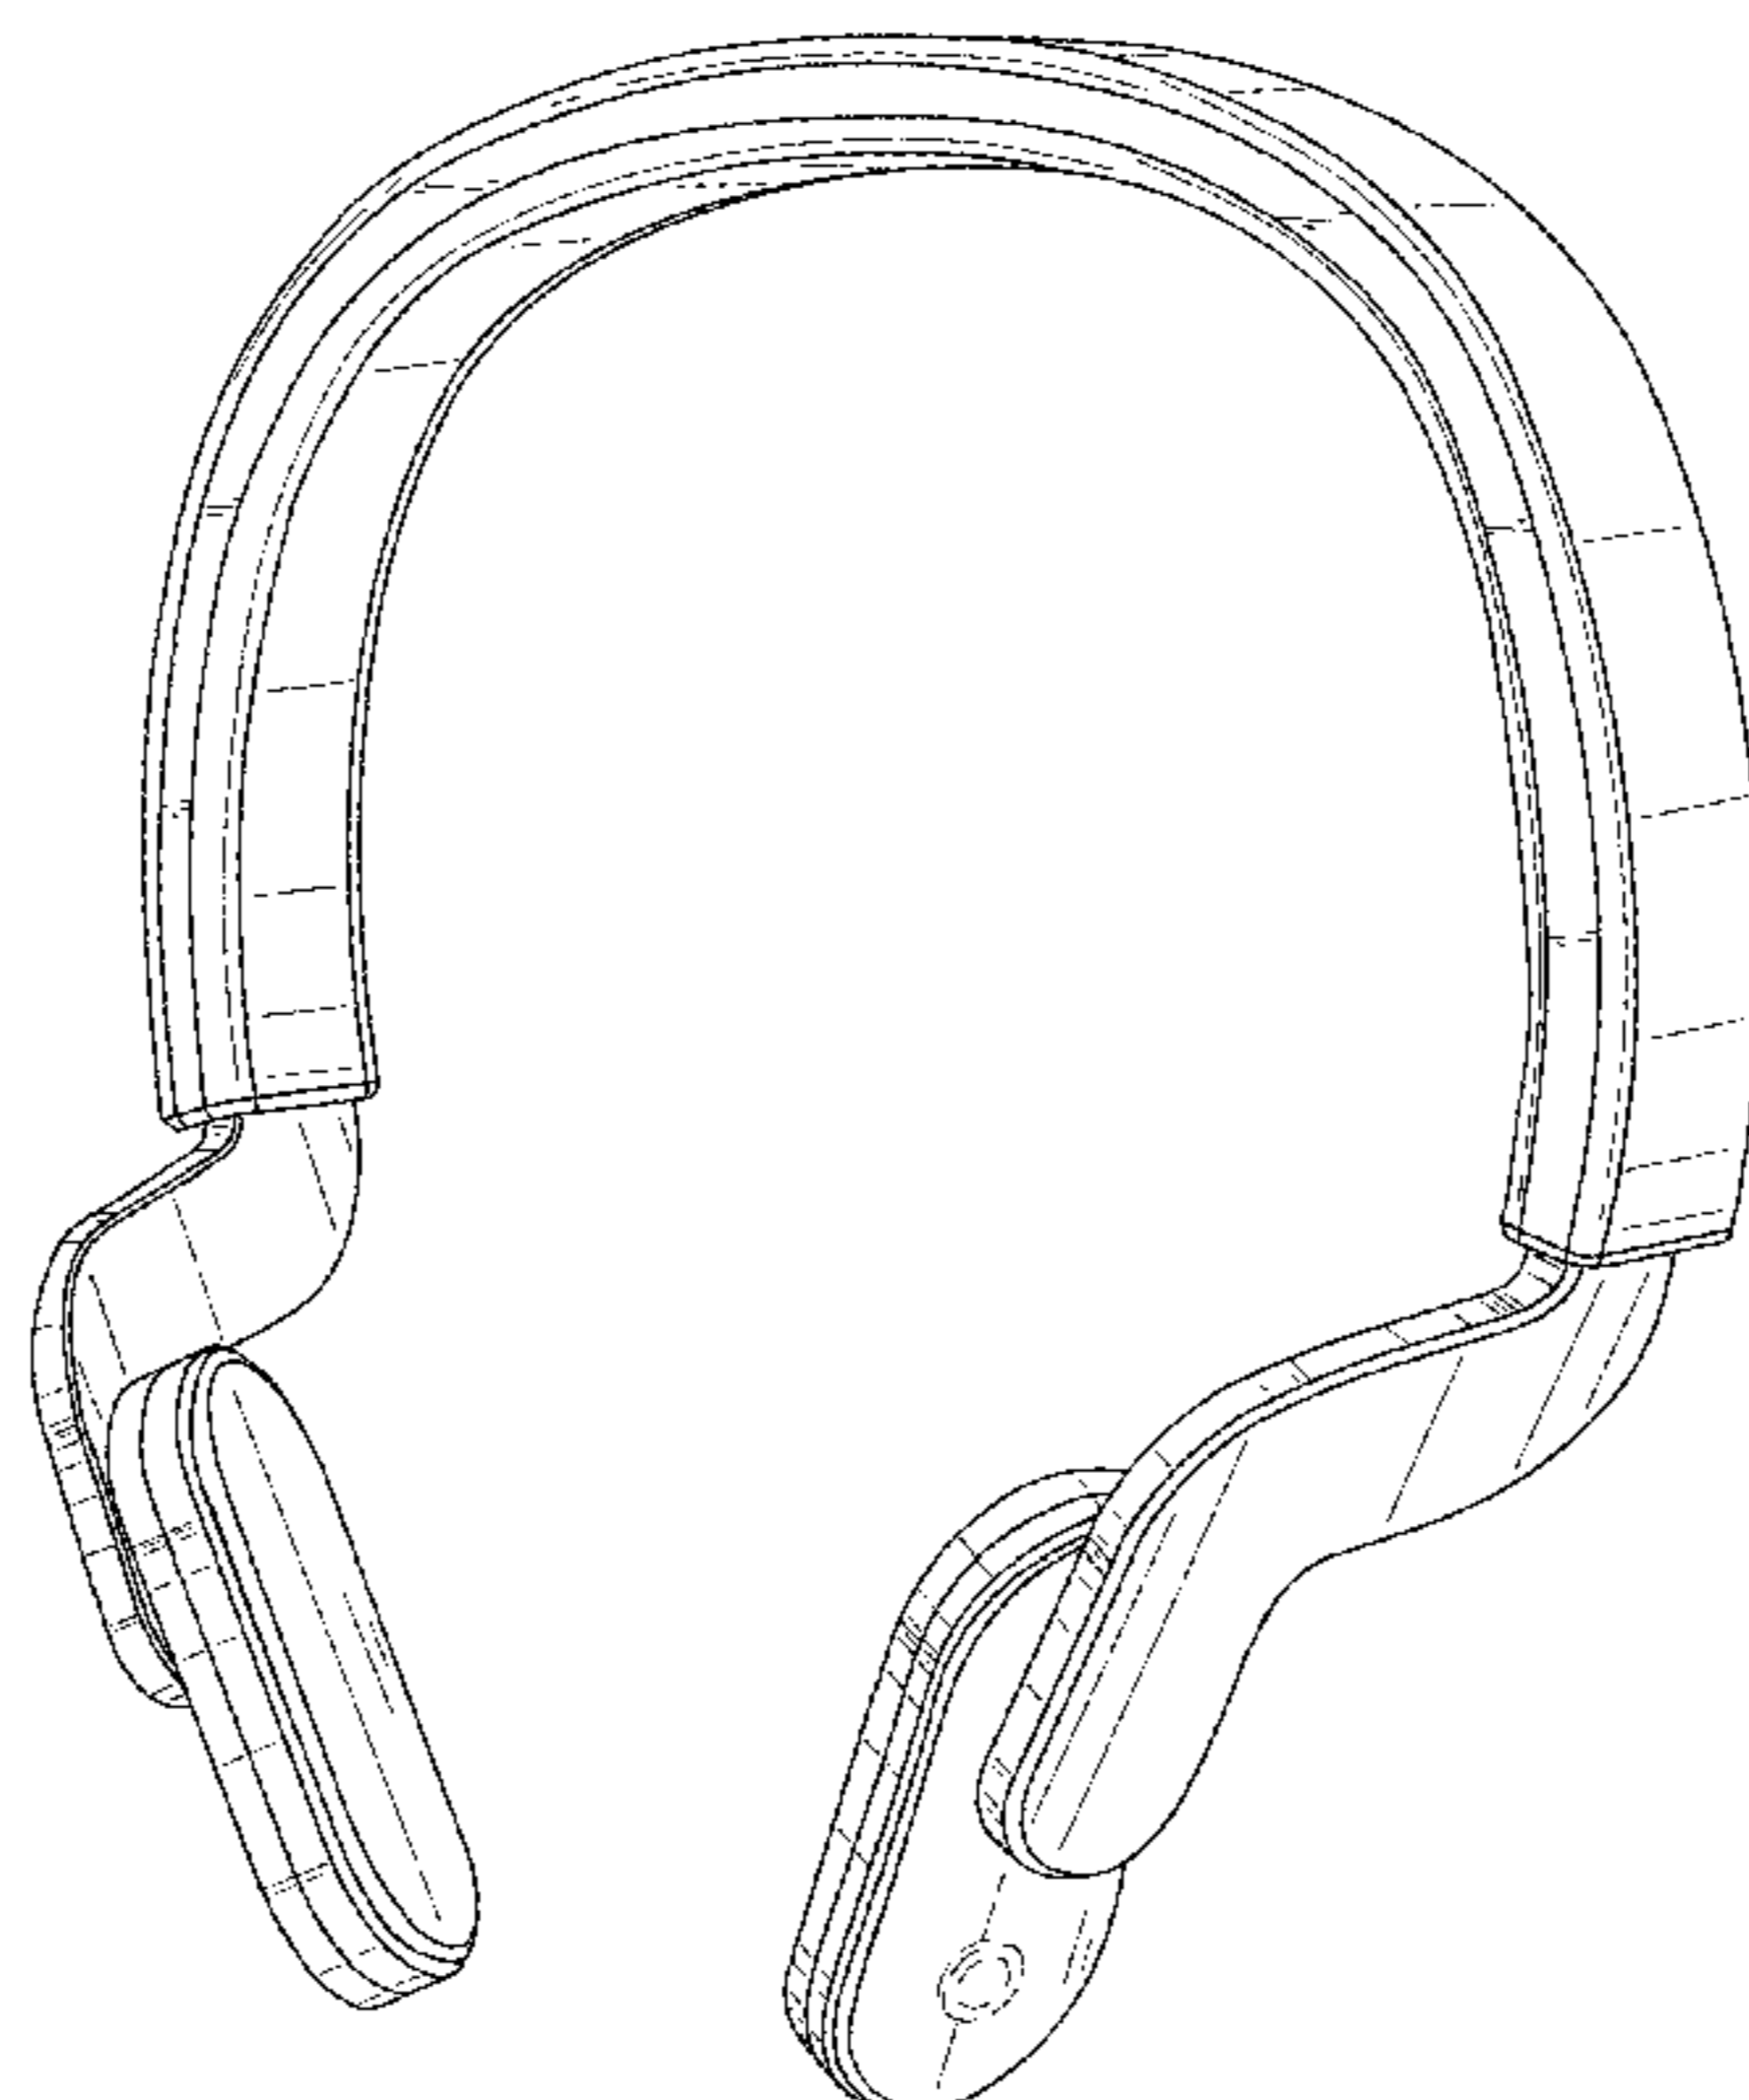

FIG. 2 is a rear view thereof; and,

FIG. 3 is a front view thereof.

The features shown in broken lines in various figures are for illustrating portions of the transcutaneous neuromodulation device and form no part of the claimed design.

Omitted views of the device of our new design are clearly understood and fully disclosed in the perspective views shown in the figures.
