(57) **CLAIM**

The ornamental design for a locking handle for range  
drawers, substantially as shown and described above.

**DESCRIPTION**

FIG. 1 shows a front, elevation view of a locking handle for  
range drawers embodying the present invention. The con-  
figuration of the top, bottom, sides, and back of the locking  
handle for range drawers form no portion of the claimed  
design.

The characteristic feature of the design resides in the asy-  
metric flat on a symmetrical combination of a rounded  
shape, extending from connection with a rectangle having  
rounded corners.

The present invention comprises the design for rotatable  
handles which can be used to prevent drawers from leaving  
open positions, such as a slidable drawer containing a  
cooking range connectable to a source of propane, mounted  
on the exterior of a recreational vehicle.

The broken line orientation of a drawer edge with respect to  
the claimed locking handle for range drawers, is for pur-  
poses of representing the environment only and form no part  
of the claimed design.
