(57) **CLAIM**

The ornamental design for an eyelid opener, as shown and described.

DESCRIPTION

Figure 1.1 is a front elevational view of an eyelid opener; Figure 1.2 is a back elevational view thereof; Figure 1.3 is a top plan view thereof; Figure 1.4 is a bottom plan view thereof; Figure 1.5 is a left side elevational view thereof; Figure 1.6 is a right side elevational view thereof; Figure 1.7 is a first perspective view thereof; Figure 1.8 is a second perspective view thereof; Figure 1.9 is a front elevational view of the eyelid opener of Figure 1.1 shown in a first condition of use; and Figure 1.10 is a front elevational view of the eyelid opener of Figure 1.1 shown in a second condition of use.

The present disclosure relates to an eyelid opener used for mechanically (forcibly) opening upper and lower eyelids in situations such as ophthalmic surgery or administration of a drug into an eye. In use, a medical doctor or the like turns a screw in a state where eyelid pressing parts are engaged with the upper and lower eyelids to adjust a distance between the eyelid pressing parts as shown in Figures 1.9 and 1.10.
