(57) **CLAIM**

The ornamental design for a microscope display screen with graphical user interface, as shown and described.

DESCRIPTION

The patent or application file contains at least one drawing executed in color. Copies of this patent or patent application publication with color drawing(s) will be provided by the Office upon request and payment of the necessary fee.

FIG. 1 shows a graphical user interface element on a display screen of a microscope system in a first position at the edge of the display screen according to a first embodiment;

(Continued)

FIG. 2 shows a graphical user interface element on the display screen of the microscope system in a second position at the edge of the display screen according to the embodiment of FIG. 1;

FIG. 3 shows a graphical user interface element on the display screen of the microscope system in a third position at the edge of the display screen according to the embodiment of FIG. 1;

FIG. 4 shows a graphical user interface element on the display screen of the microscope system in a first position at the edge of the display screen according to another embodiment of the invention;

FIG. 5 shows a graphical user interface element on the display screen of the microscope system in a second position at the edge of the display screen according to the embodiment of FIG. 4; and,

FIG. 6 shows a graphical user interface element on the display screen of the microscope system in a third position at the edge of the display screen according to the embodiment of FIG. 4.

The description of a “first position,” a “second position,” and a “third position” in the above embodiments indicates first, second, and third position in relation to movement of the icon(s) shown in each embodiment, where the appearance of the transitional image sequentially transitions between the images shown in FIGS. 1-3 and 4-6, respectively. The process or period in which one image transitions to another image forms no part of the claimed design.

The broken lines in the accompanying drawings illustrate environmental structure that forms no part of the claimed design.
