(57) **CLAIM**

The ornamental design for an ejaculation promotion apparatus, as shown and described.

DESCRIPTION

1.-3. Ejaculation promotion apparatus
Figure 3.1 is a front view of an ejaculation promotion apparatus;
Figure 3.2 is a back view thereof;
Figure 3.3 is a left view thereof;
Figure 3.4 is a right view thereof;
Figure 3.5 is a top view thereof;
Figure 3.6 is a bottom view thereof; and
Figure 3.7 is a perspective view thereof
The ejaculation promotion apparatus is a means for promoting human ejaculation, and has a substantially spherical body having a large number of concave and convex portions on the outer peripheral surface; since it is an integral product composed of a gel-like resin such as an elastomer, it is deformed to be flexible; as shown in the central longitudinal sectional view, the inside is hollow; the ejaculation promotion apparatus is sold in the form shown in the front view and the like; in actual use, the front and back are reversed so that the concave and convex portions are on the inside; when the inner surface of the hollow space is turned outside while being pulled out from the lower end opening shown in the central longitudinal sectional view, the concave and convex portions are located on the inner surface; a penis is inserted from the opening, the ejaculation promotion apparatus held by the user's hand is advanced and retracted, and the penis is stimulated (rubbed) by the concave and convex portions of the inner wall to promote ejaculation.
