(57) **CLAIM**

The ornamental design for a rear combination lamp for automobile, as shown and described.

**DESCRIPTION**

FIG. 1 is a front elevational view rear combination lamp for automobile;

FIG. 2 is a top plan view thereof;

FIG. 3 is a bottom plan view thereof;

FIG. 4 is a left side elevational view thereof;

FIG. 5 is a right side elevational view thereof; and,

FIG. 6 is a front side perspective view thereof.

The rear combination lamp for automobile is configured to be mounted to an automobile. The mounting structure and support structure of the rear combination lamp for automobile, shown in broken lines in FIGS. 1 to 6, form no part of the claimed design since the mounting structure and support structure are hidden when the rear combination lamp for automobile is mounted to the automobile.

In addition, the appearance of the rear side structures of the rear combination lamp for automobile as shown in broken lines in FIGS. 1 to 6 is for purpose of illustrating the boundaries of the exterior surface of the rear combination lamp for automobile, and forms no part of the claimed design. The rear combination lamp for automobile has a front lens that is transparent such that features behind the lens are at least partially visible as illustrated.

A second embodiment of my new design includes the mirror image of the rear combination lamp for automobile shown in FIGS. 1 to 6.
