(57) **CLAIM**

The ornamental design for a mobile computing support system having an illumination region, as shown and described.

DESCRIPTION

The patent or application file contains at least one drawing executed in color. Copies of this patent or patent application publication with color drawing(s) will be provided by the Office upon request and payment of the necessary fee.

FIG. **1** is a view of a front of the mobile computing support system having an illumination region in an illuminated state showing a first image in a sequence for the illumination region of our design;

FIG. **2** is a front view showing a second image in the sequence thereof;

FIG. **3** is a front view showing a third image in the sequence thereof;

FIG. **4** is a front view showing a fourth image in the sequence thereof;

FIG. **5** is a front view showing a fifth image in the sequence thereof; and,

FIG. **6** is a front view showing a sixth image in the sequence thereof.

The dash-dash lines depicting various optional components of a mobile computing support system are included for illustrating environmental structure and form no part of the claimed design. The dot-dash lines are used to show the region broken away and form no part of the claimed design. The appearance of the illumination region sequentially transitions between the images shown for the sequence in FIGS. **1-6**. The process or period in which one image transitions to another in the sequence forms no part of the claimed design. The difference in color in the sequence indicates a contrast in the colored illumination of the sequence and does not depict any particular texture or material.
