Primary Examiner — Katherine A Holbrow

(57) **CLAIM**

We claim the ornamental design for automotive vehicle display screen with a graphical user interface, as shown and described.

DESCRIPTION

FIG. **1** is a front view of a first image in a sequence for an automotive display screen with graphical user interface; and,
FIG. **2** is a second image thereof.
The outermost broken line rectangle shows the display screen, and forms no part of the claimed design. The white broken lines within the display screen show bounds of the claimed design and form no part thereof. The subject matter in this patent includes a process or period in which an image changes to another image. The appearance of the transitional image sequentially transitions between the images shown in FIGS. **1** and **2**. The process or period in which one image transitions to another image forms no part of the claimed design.
