(57) **CLAIM**

The ornamental design for a display screen with graphical user interface, as shown and described.

DESCRIPTION

FIG. **1** is a front view of a display screen with graphical user interface showing a first image in a sequence of the graphical user interface according to the claimed design.

FIG. **2** is a front view of the display screen with graphical user interface showing a second image in the sequence of the graphical user interface.

FIG. **3** is a rear view of the display screen with graphical user interface.

FIG. **4** is a left side view of the display screen with graphical user interface.

FIG. **5** is a right side view of the display screen with graphical user interface.

FIG. **6** is a top view of the display screen with graphical user interface; and,

FIG. **7** is a bottom view of the display screen with graphical user interface.

The dash-dot-dot-dash broken lines in the drawings showing the device and display screen illustrate portions of the article which form no part of the claimed design. The evenly spaced broken lines in the drawings illustrate portions of the graphical user interface which form no part of the claimed design.

Shaded portions indicate a contrast in appearance.

The oblique hatch shading shown at the axial table coordinate, axial interference icon, and table position menu border in FIG. **2** represents contrast in appearance, but any pattern formed by the oblique hatch shading forms no part of the claimed design, and no particular color is claimed.

The appearance of the graphical user interface sequentially transitions between the images shown in FIGS. **1-2**. The process or period in which an image transitions to another forms no part of the claimed design.
